Maine Coast.

FOR SALE—On Penobscot Bay. A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision. Address,

J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

Islesboro, Maine.

FOR SALE.—A nice farmhouse of 8 rooms in perfect repair and order. Splendid situation, facing the Camden Mountains; 4 acres of land, barn and carriage house, nice orchard, and well. Shore privilege and boat landing in front of house. Fine chance to enlarge into a summer cottage at small expense. Price $2,350, if bought before May 15. Part mortgage if desired. Address L. N. GILKEY, Executor,
Islesboro, Maine.

TWO NEW BOOKS

Laughlin's Elements of Political Economy. *Revised Edition*..... $1.20

By J. LAURENCE LAUGHLIN, Ph.D., Head Professor of Political Economy in the University of Chicago.

A simple statement of the elementary principles of political economy, designed especially for high schools and suitable for either a short or a long course. The important questions of the day are discussed fairly and impartially. The book is thoroughly revised, and as regards theory and practical data it is entirely in accord with the times.

Martin's Civil Government of the United States. *Revised Edition*.....$0.90

By GEORGE H. MARTIN, A.M., Supervisor of Schools, Boston.

In its revised form this book is entirely up to date, and includes all those changes which have recently taken place in our Government. It is suitable for either high schools or upper grammar grades, and it is particularly distinctive because of its historical method of treatment, its discussion of the general principles of government, and the great prominence given to local government.

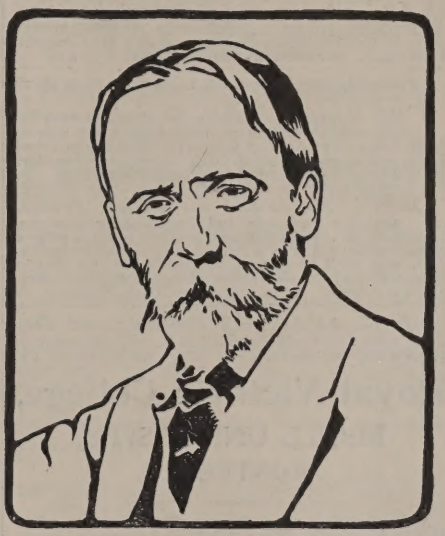
VOL. LXXIV—NO. 1924. THURSDAY, MAY 15, 1902. PRICE TEN CENTS.

A NEW AND UNUSUALLY IMPORTANT NOVEL

By GEORGE W. CABLE

READY on WEDNESDAY May 21.



READY WEDNESDAY of Next Week

BYLOW HILL

IN the midst of a quiet New England town Mr. Cable has set a story which might have engaged the sombre power of Hawthorne. In telling it, however, he has used the humor and charm of his best work as well as this intensity; so that the result, especially as the tragedy is confined to the mind, is one of more than a single motive and holds the reader by more than one interest.

Restaurant à la Carte. Dining-Room, Table d'Hôte, Cafe and Billiard-Room for Gentlemen.

THE GRIFFIN SERIES of new fiction, designed to furnish novels of a high class in convenient form, printed and bound in the best manner and at a moderate price. The initial volume is

The WESTCOTES

By A. T. QUILLER-COUCH

Illustrated by J. L. GEROME FERRIS. 12mo. Cloth. $1.00

THE WESTCOTES has been running as a serial simultaneously in *The Era* in this country and *Blackwood's Magazine* in England. The London *Spectator* and *The Speaker* both give it high praise. It is a charming tale, with all Mr. Quiller-Couch's delicacy of touch and high literary quality.

IMMEDIATELY SUCCEEDING VOLUMES WILL BE

KENT FORT MANOR
By WILLIAM HENRY BABCOCK, author of "The Tower of Wye."

THE EMBARRASSING ORPHAN
By WILLIAM E. NORRIS.

THE ARCHIERY OF SAMARA
A Russian Novel. By HENRY ILIOWIZI.

LAST WORDS
By STEPHEN CRANE.

Other volumes will be announced from time to time.

The Principles and Practice of

WHIST

By LENNARD LEIGH and ERNEST BERGHOLT, with a chapter by W. H. WHITFELD, M.A., Cantab. Crown 8vo. Cloth, gilt, $1.50 *net.*

No work of equal scope or of the same character has heretofore appeared.

3RD EDITION

BRIDGE WHIST

HOW TO PLAY IT

By LENNARD LEIGH, Joint Author of "The Principles and Practice of Whist." The latest and most complete manual of Bridge, and the only work containing a code of laws. 16mo. Cloth, $1.00.

"THE BEST BOOK ON BRIDGE."—Whist Editor of the Detroit *Free Press.*

"Admirably suited for the use of those who wish to study the game."—*Whist*, Milwaukee.

HENRY T. COATES & CO., Publishers, Philadelphia.

LONGMANS, GREEN, & CO.'S NEW BOOKS

Some Unpublished Letters of Horace Walpole

Edited by Sir SPENCER WALPOLE, K.C.B. With 2 Photogravure Portraits. Crown 8vo, gilt top, $1.50 *net.* By mail $1.58.

The Book of the Rifle

By the Hon. T. F. FREMANTLE, Major 1st Bucks V. R. C. With 54 Plates and 107 Diagrams. 8vo, $5.00.

"Practically everything connected with rifles and rifle shooting is dealt with. We can most strongly recommend this book to all our readers who are at all interested in shooting."—*Land and Water.*

Malarial Fever:

Its Cause, Prevention and Treatment; Containing Full Details for the Use of Travellers, Sportsmen, Soldiers and Residents in Malarious Places.

By RONALD ROSS, F.R.C.S., D.P.H., F.R.S., Walter Nyers Lecturer Liverpool School of Tropical Medicine. *Ninth Edition, Revised and Enlarged.* With Illustrations. 8vo, cloth, $0.75 *net.* By mail $0.82.

HANDBOOKS FOR THE CLERGY.

A Series of Volumes Dealing with Various Aspects of Clerical Life and Work. Edited by the Rev. ARTHUR W. ROBINSON, B.D.

Foreign Missions

By HENRY H. MONTGOMERY, D.D., formerly Bishop of Tasmania, Secretary of the Society for the Propagation of the Gospel in Foreign Parts. Crown 8vo, $0.90 net; by mail, $0.97.

The Theory of Optics

By PAUL DRUDE, Professor of Physics at the University of Giessen. Translated from the German by C. RIBORG MANN and ROBERT A. MILLIKAN, Assistant Professors of Physics at the University of Chicago. With 110 Diagrams. 8vo, pp. xxvii.-546, $4.00.

"No one who desires to gain an insight into the most modern aspects of optical research can afford to be unfamiliar with this remarkably original and consecutive presentation of the subject of Optics."—FROM PREFACE BY PROF. A. A. MICHELSON OF THE UNIVERSITY OF CHICAGO.

Elementary Plant Physiology

By DANIEL TREMBLY MACDOUGAL, Ph.D., Director of the Laboratories, New York Botanical Garden, Author of "Practical Text-Book of Plant Physiology." With 108 illustrations. 12mo, $1.20.

The History of Trade Unionism

By SIDNEY and BEATRICE WEBB. With Map, Appendix of Tables, Bibliography, etc., and Index. *New and cheaper edition.* With New Introduction. 8vo, $2.60 *net.* By mail, $2.76.

LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, MAY 15, 1902.

The Week.

Further dispatches only magnify the horror of the destruction of Saint Pierre. Warning there had been for some time previous in the grumbling of the mountain, but when the fatal day came, the mountain wrought its work of devastation in minutes. The fall of incandescent sand and of burning gases was so sudden that even the ships in the harbor were burned at their moorings. Such a realization of the Biblical "fire from heaven" which passed over the cities of the plain and left a wilderness, is probably unexampled in secular history. The extent of the ruin and the number of the perished are still matters of sheerest conjecture. It is probable, however, that not less than 25,000 people, more than one-eighth of the total population, are buried at the foot of Mt. Pélée. Saint Pierre is the chief commercial city of the little island of Martinique, and its destruction will doubtless involve widespread suffering. A simultaneous volcanic disturbance in the neighboring island of St. Vincent reckons victims by thousands there also. The economic distress of these colonies was already extreme, and disaster by fire or flood fills the cup of their misfortune to overflowing. The world-wide sympathy which this unparalleled calamity everywhere arouses is actively expressing itself in practical beneficence.

Scientists, or at least the more discreet among them, naturally shrink from lifting their puny explanations and predictions in the face of such an earth-shaking and incalculable disaster. What is a geologist that thou art mindful of him?—so the gigantic and unforeseen convulsions in the West Indies seem to ask in scorn. Yet one geologist at Washington comes forward to soothe apprehension about the Danish Islands, and to assure the public that no volcanic action can endanger that future possession of the United States. Possibly, though nature seems given to mocking expert knowledge; and we must not forget that St. Thomas has known a tidal wave almost as calamitous as an eruption. We can easily imagine that Denmark will be more ready to part with such uncertain property, now that she has seen French and English possessions in the Lesser Antilles ruined in a moment. The particular enterprise in which the appalling catastrophe should make the United States pause, is the building of an Isthmian canal. Nicaragua is right in the line of volcanic disturbance, and seems a peculiarly risky spot for the investment of $250,000,000 in a canal wholly dependent upon an inland lake which a single earthquake might drain dry. Even at Panama the danger from volcanic shock, though much less than at Nicaragua, undoubtedly exists. There, however, a sea-level canal could be cut. Even that could be, of course, wrecked by any such shattering of the earth's crust as has overwhelmed St. Pierre; but a much less serious movement would be enough to destroy a canal at Nicaragua, with its six or eight locks.

Senator Spooner's promised speech on the Senate Philippine bill we await with interest. He intimated, the other day, that he thought the Lodge bill ought to be amended before being passed. Unless Mr. Spooner has decidedly changed his point of view since last year, the amendments he would like to see made must relate to its exploiting features and aim to cut them out. In the Republican newspapers, none of which seems to know what is the actual text of the bill, it is referred to as a measure establishing a "civil government" in the archipelago. It really does nothing of the kind, but provides opportunities, as Senator Lodge confessed, for Americans to make money in the Philippines. But, by the so called Spooner amendment of last year, we undertook to make no money there at the expense of the natives. That mask, however, certain Senators now seem ready to drop. The "sacred-trust" theory is rapidly disappearing. Our Christian mission in the Philippines is, in fact, coming to look as unreal as were the pious professions attributed to the first settlement of Cape Ann, in the seventeenth century. A preacher from Massachusetts Bay went to preach to the Cape Ann fishermen, and exhorted them to "approve themselves a religious people," since "otherwise they would contradict the main end of planting this wilderness." Whereupon, as we read in Young's 'Chronicles,' there were intimations that this sort of talk was misdirected, being evidently meant for the Bay Colony; and "a well-known person then in the assembly cried out, 'Sir, you are mistaken. *Our main end was to catch fish.*" A period of similar frankness seems to have arrived in our Philippine policy.

An appeal to clergymen of all denominations throughout the United States to protest against the conditions in the Philippines has been signed by the Rev. Dr. C. H. Parkhurst, the Rev. Dr. Henry A. Stimson, the Rev. Robert Collyer, and a number of other ministers of New York city. The appeal is accompanied by liberal extracts from testimony taken before the Senate Committee on the Philippines regarding the cruel treatment of the natives by our troops, and closes with an urgent request that clergymen "inform themselves fully in regard to the position of the United States in the Philippine Islands, in order that they may advise the American people as to their duty in regard to this matter." It is accompanied by an interesting letter from the Rev. Joseph R. Duryee of Philadelphia, who declines to sign the protest because of his "sense of justice to the American troops"—but does not stop there, as the Imperialists would prefer, adding that "the tendency of this Senate inquiry is to make the army bear the blame of an immoral policy of subjugation begun four years ago." Mr. Duryee also contests the claim that "destiny" is on the side of those who are carrying out this immoral policy of subjugation. "If the Administration and Congress, representing a majority of our people," he says, "have not learned by this time that tropical possessions in the East are not the destiny of our people, they are blind to the facts of nature these four years of experience have taught."

Secretary Root's answer to the Senate resolution inquiring what military orders had been sanctioned by the War Department, assumes responsibility for the policy of concentration camps and of retaliation in the Philippines, but denies knowledge or approval of the ferocious order given by Gen. Smith to Major Waller. If he had not denied it, the President would have had to order the court-martial of Secretary Root as well as of Gen. Smith. Thus the slander of the *Army and Navy Journal* is disposed of which asserted that it was absurd for the President and the Secretary of War to "plead the baby act" in connection with Gen. Smith's order to burn and slay promiscuously, and which roundly affirmed:

> "Gen. Smith's orders in the province of Samar and Gen. Bell's in the province of Batangas were submitted to Major-Gen. Chaffee. He approved them, and submitted copies of them to the War Department at Washington, where not a word was said against them or against the operations conducted in accordance with them until it was discovered that it had been necessary to use harsher means than syringes loaded with cologne water to put down the insurrection."

Mr. Root's letter to the Senate explicitly declares that "the Secretary of War has no knowledge of any order or orders issued by Brig.-Gen. Jacob H. Smith to Major L. W. T. Waller, United States Marine Corps, pleaded by the latter in defence before the recent court-martial which tried him at Manila. No such or-

der has been received at the War Department."

The Secretary takes refuge in the shadow of the mighty name of Lincoln on the subject of retaliation against a barbarous enemy. It would have been instructive, however, to state the fact that Lincoln refused to retaliate for the alleged massacre of colored troops at Fort Pillow, though strongly urged to do so by members of his Cabinet. For concentration camps, Mr. Root has, of course, to turn to Spanish authority. It was of Gen. Weyler that Gen. Bell learned that strategy. In forwarding the plan to Washington, Gen. Chaffee admitted that it was "impossible" for him to justify concentration "in such a way that all persons will agree that right action has been taken." We should think so. Chaffee had not forgotten, if the War Department had, that the *reconcentración* in Cuba was used to inflame this country against Spanish cruelty. Of course, Secretary Root is at pains to show that our concentration is a policy of the truest kindness; that the Filipinos whom we dragged from their homes were "well fed." So would the Cubans have been in Weyler's camp if he had had the money to do it. Spain was bankrupt. She could not pay and feed even her own troops, and there was inevitable suffering among the Cubans driven within the military lines. Because we are rich enough to give food to the Filipinos whom we drive within *our* military lines, we plume ourselves on our "humane" warfare! But tell it not in Spain, or we shall provoke even grim Gen. Weyler to mocking laughter.

There is a remarkable contrast between the statement regarding outrages upon Filipinos by our troops, which was sent to the Senate by Secretary Root on the 19th of February, and the list of officers and enlisted men in the army tried by court-martial for such offences which came from the War Department and which was laid before the Philippine Committee by Senator Lodge on May 6. The Secretary's communication of February 19 contained "a memorandum of forty-four officers, soldiers, and camp-followers, who have been tried, and thirty-nine of them convicted," for violation of orders calling attention to the general orders of war which especially refer to humanity. The list submitted last week contained the names of "over three hundred officers and enlisted men"—camp-followers now being left out of the account—who have been tried by court-martial on similar charges. The implication seems to be plain that there must have been a sudden and marked activity in the punishment of offences against the Filipinos in the last few weeks, since public sentiment in this country became aroused by the stories of cruelty towards the natives on the part of our troops.

President Palma's wish to obtain a Cuban reciprocity treaty that will really aid Cuban trade, naturally grieves and depresses the beet-sugar Senators. They cannot understand such a mercenary attitude. "Why," says Senator Burrows, "the man thinks of nothing but money from the United States, cares nothing for friendliness, and apparently feels no gratitude." Why cannot Señor Palma take example from Mr. Burrows, who stands up for the beet purely as a friend, and out of gratitude, and with not one thought of cash profits? The Cuban President should have seen how his talk about enabling the Cubans to make money was certain to convince Senators of the need of annexing Cuba. They are, in fact, gravely shaking their heads over the outlook, and saying that our troops will have to go back within six months. If there is any money to be made in the island, Americans will see to that. As Senator Lodge virtually said, the other day, in his speech which so nobly reflected the New England conscience, "It is Democratic policy not to allow an American to make money, but the Republican party will see to it that money is made, even if every pledge has to be broken."

"Death hath this also, that it openeth the gate to good fame and extinguisheth envy." Already is this comfort coming to the friends of the late Admiral Sampson. Falling as his death did after a marked abatement of the bitterness of the naval controversy in which he was an unwilling and pathetic participant, his passing from earth was in the midst of a general sentiment towards him more kindly than at any time for three years past; so that even those newspapers which have said the harshest things of him are now recording his high accomplishments as an officer and his sterling qualities as a man. His naval fame is secure. Contemporary foreign opinion usually expresses the verdict of posterity, and military writers of other nations have accorded Admiral Sampson a full measure of appreciation and praise. Even before the Spanish war he was widely and favorably known abroad for his attainments in the study of high explosives and of gunnery; and what was thought of his operations off Cuba, and especially of his skilful dispositions at Santiago, may be read, for example, in H. W. Wilson's naval history of 1898, 'The Downfall of Spain.' "Admiral Sampson," writes that author, "from first to last did his work in a manner that commands British admiration." The esteem in which he was held by the officers and men who served under him has been many times made manifest. Had it not been his ill luck to be ordered away by the Secretary of the Navy to confer with Gen. Shafter, on the morning of that day when the Spanish fleet appeared from Santiago, only to disappear from history, he would have become the idol of the American people, and for more than the Dewey moment.

Doubt as to the fate in the Senate of the bill which has just passed the House providing for the admission of Oklahoma, Arizona, and New Mexico to statehood is based upon uncertainty as to the political complexion of the three Territories. It is not pleasant to think that the question of admission should hinge upon partisanship, but it has always been so, from the days when slave and free States were admitted in pairs, to the present time. There seems to be a prospect that the pending bill will fail, because Arizona is known to be Democratic, and New Mexico and Oklahoma are under suspicion. It will, of course, be no great calamity to the nation if this happens. If the question of partisanship were not dominating, attention might be drawn to the matter of fitness for statehood, and it is not at all certain that New Mexico and Arizona could pass muster. Oklahoma, on the other hand, has made so much progress during the thirteen years since her organization as a Territory, that, if she were applying alone, her case would seem a strong one. But she, too, can wait.

When Mr. Evans resigned as Commissioner of Pensions, he publicly stated that he was retiring because his continuance in office would be "embarrassing" to certain "statesmen." In private he never made any concealment of his willingness to remain, provided the President desired him to do so. Those are the facts, and nothing that Mr. Evans now says, in the generous wish to relieve Mr. Roosevelt from responsibility, is really inconsistent with them. He speaks at present of his long having wished to give up the office; of his having repeatedly offered his resignation, and of his having been urged to stay both by Mr. McKinley and by President Roosevelt. Certainly, but why was he uneasy? Why did he find the honest administration of the Pension Bureau a source of continual vexation? Everybody knows. The politicians were clamoring for his head. They were accusing him of imperilling elections in Ohio and in various Congressional districts. They were besieging the President to remove him. By their continual coming they at last wearied Mr. Roosevelt into doing what President McKinley would not do. The latter said to the Commissioner, "As long as you are attacked solely for a fearless and impartial enforcement of the law, count upon my support, and stay where you are." President Roosevelt said: "Well, if you must go, I'll see that you get a better-paying office." That

is the whole story. No attempt, at this late day, to break the force of its unpleasant implications can avail with those who know the truth.

Secretary Shaw is entitled to no little credit for the amended regulations in regard to the inspection of passengers' baggage at this and other ports promulgated on Thursday. Unlike Mr. Gage, this Secretary from a Western State was not content to sit down and say that under the existing law nothing could be done to ameliorate the barbarous conditions on the piers of the transatlantic liners. He listened carefully to the statements of all who took the trouble to complain, and found time, even when just familiarizing himself with the duties of his great office, to see for himself exactly how the inspection of personal baggage is conducted. As a result of his observation and study, we have the new rules, which are but the natural result of such an investigation, combined with some common sense. Decency alone dictates the provision that ladies desiring a private examination of their baggage shall be accorded the privilege, wherever possible. If the Treasury Department is able to show its inspectors that Secretary Shaw is not merely writing for effect, there should be an end to the many complaints as to the needless and unjustifiable injury to the contents of trunks. If all inspectors who take tips are to be dismissed, we fear very much that there will be a number of vacancies in the customs service, but Secretary Shaw's warning as to this offence is in the interest of honesty and efficiency.

Most important of all are the rulings that travellers shall not have to pay duty on small purchases, such as articles of adornment, etc., within the hundred-dollar limit, and the extension of the non-resident classification to include all who have been abroad for a year, with a fixed abode, for some specific object. Gratifying and enlightened as all these changes are to those who have unceasingly protested, as we have done, against the uncivilized character of the customs procedure, it must not be forgotten that the iniquitous law itself still remains on the statute-book. Until it is abrogated, this great country will still be in the unique position of harassing its own citizens and imposing restrictions upon foreign travel for the sake of a paltry and ridiculous income. No other country has ever adopted so undignified and unworthy a procedure, and all those who are concerned about the nation's reputation for breadth of view, common sense, and fair dealing with its own citizens, should join in the movement for the repeal of the $100 exemption clause which was inserted in the Dingley law through the efforts of a few interested persons.

We are apparently on the verge of a great coal strike, with the public very much in the dark as to the nature and merits of the controversy between miners and operators. No detailed statement of the demands of the men has been made, though a "wage scale" adopted at Shamokin has been, it is asserted, presented to the operators. What offers, if any, the owners have proposed, outsiders have not the slightest idea. The announcement of the Mine Workers speaks of the desire for "higher wages, shorter hours, and better conditions of employment," but all without specification. It declares, also, that the operators have made no "tangible" concessions. But this, too, may mean much or little. So may the refusal of the employers to refer the dispute to arbitration. If the demands of the miners are within reason, then the companies will suffer from the suspicion which always rests nowadays upon that party to a labor controversy which declines to allow it to be arbitrated. On the other hand, if the pretensions of the Miners' Union amount to a practical summons to the operators to surrender the control of their own business, then we are at once face to face with a question as to which arbitration cannot be invoked. The general ignorance in respect to all these details makes it impossible, as the case now stands, to express an intelligent opinion of the rights and wrongs of the strike.

The decision to remove Andover Theological School to Cambridge means, of course, the practical extinction of an institution which has had nearly a hundred years of life, many of them influential and resounding, the more recent ones, however, a period of gradual and melancholy enfeeblement. Many causes have contributed to the slow decay of this once famous school of the prophets. The argument of locality had come to be against it, though even in Chicago the theological seminary of the Congregational Church has fallen on evil days, as respects the attendance of students. At Andover, the large endowments and fine equipment and able teaching have not availed to attract, in recent years, more than a handful of young men. In addition to the general falling off of interest in theological education, there have been, of course, especial reasons why Andover has declined. Torn by controversies, doctrinal and personal, long suspected by the more stiffly orthodox within the denomination, it has seen its usefulness disappear with its fame. Yet the quenching of that light on "Andover Hill" is an event of far-reaching significance. Massachusetts and New England can hardly seem the same again to men of middle age. That there should be no "Andover theology," no successor to Moses Stuart and Leonard Woods and Edwards A. Park—this will seem to them almost incredible. But inexorable time has brought even this about, "lest one good custom should corrupt the world."

If Lord Salisbury entertained any doubts and fears as to the outcome in South Africa, he would hardly have expressed them at the annual meeting of the Primrose League. The occasion was equally inauspicious for frank confession of past shortcomings. It is very likely, then, that a certain element of patriotic flummery in his address on May 7 was merely for the primrose gallery. But, unfortunately, these vivacities "between friends" are cabled to the ends of the earth, including South Africa, and what may have delighted the Primrose League may well enough grate on foreign susceptibilities. Certainly the declaration that the attitude of the Government towards the Boers remains unchanged is highly impolitic at the present juncture, and can only produce a deplorable impression. It is generally and, we believe, rightly supposed that the Ministry will give the commandos far better terms than were offered after the Bloemfontein-Pretoria campaign. If this be not the attitude of the Ministry, the present peace negotiations in South Africa are clearly farcical. In any event, it was no time to fall back on the old Jingo formulas.

The first political effect of the return to food taxes in England is the loss of a seat to the Government in a bye-election. A Conservative majority of 849 at Bury has been turned into a Liberal majority of 414. It was the corn tax that did it, all accounts agree, as nothing else was talked of in the canvass. Conservative agents, to be sure, tried to raise again that charlatan cry of Chamberlain's, "A seat lost to the Government is a seat gained to the Boers," and the London *Times*, after the event, is solemnly expressing the fear that the Liberal success will so encourage the Boers that they will now refuse to make peace. With an obsession like this it is impossible to reason. Some day or other, Englishmen have got to be allowed to discuss measures of government without having the Boer bogey held up to them as to naughty children. The food tax seems to have been chosen as a good place to begin. It is an old saying in England that a Ministry can make the price of bread what it pleases as long as there is a war. The trouble with Sir Michael's imposts on wheat and flour is that they come when the war is thought to be over. In the political overturn at Bury we see what blows are likely to be dealt the Government when once they cease to be able to identify themselves with the country, and to call for support as a patriotic duty.

THE REAL ENEMIES OF THE ARMY.

Gen. Grenville M. Dodge made an address before the Loyal Legion on Wednesday evening of last week, in protest against what he calls the unjustifiable assaults upon the army on account of the cruelties reported from the Philippines. His logic is not entirely clear to us. His position appears to be (1) that there have been no violations of the laws of war in the Philippines; (2) that, if there have been, they were under extreme provocation; (3) that, anyhow, they are no worse than acts of the soldiers on either side in our civil war; and (4) that court-martialling officers for the use of the "water-cure" torture is "a great wrong." If that reasoning seems a little obscure, so does Gen. Dodge's further inference that "this great hubbub about cruelties" is intended as an attack upon the veterans of the civil war. All this is too much for us, but we can see very clearly that throughout Gen. Dodge's address there runs an honest indignation at what he considers an attempt to "discredit the army." As to that we wish to say a word.

No doubt, the army, like every other human institution, suffers in reputation from the black sheep connected with it. This is inevitably the case when public attention chances to be fixed upon sensational details, given a momentary prominence in the press. Now we have always maintained that cruelty in the treatment of the Filipinos by our troops has been exceptional. Our officers are, as a rule, incapable of it; the rank and file is not made up of men who are naturally brutal. We wish to entertain no illusion about the matter, one way or the other. An army that can do no wrong does not exist—not even in France, though there they sometimes seem to think they have got such an impossible thing. On the other hand, we know that our private soldiers are not, as the Duke of Wellington said the British army was, recruited from "the scum of the earth." With educated officers, jealous for their profession, and with men in the ranks who are now coming largely from the farm, we are confident that we have armed representatives in the field who, in ordinary circumstances and under the usual conditions of warfare, would do themselves and their country credit. They are not perfect. As an English officer said, not even the British regulars in South Africa have been irreproachable in conduct. Among the 40,000 men in the Philippines there are, of course, some ruffians, some ne'er-do-weels, some incompetent officers foisted into the service by politicians; and it is their misdeeds which have brought disgrace upon the army.

We do sincerely sympathize, however, with those soldiers of ours in the Philippines who bitterly complain of what they consider unjust attacks upon them for the manner in which they carry out their orders. In this, we think, they are unanswerable. What they say is practically this: "You sent us over here. You ordered us to disperse the armed Filipinos, and we have done it. Then you tell us to crush out all opposition to our rule; to attack these people in their hamlets and fields; to march from end to end of the islands, and, wherever we find sullen disaffection or inextinguishable hatred, to strike at it; to unearth plots and punish secret treason; to make the Filipinos not merely surrender their arms, but submit their wills. Now, how can we do this without severity? How can we pursue a handful of men through swamp and jungle, with our brains on fire under this tropical heat, and be expected to observe all the nice proprieties of the tented field? You give us a devil's work to do, and then complain if we do not behave like saints. We are but carrying out your instructions, and if they are bloody, the fault is yours, not ours."

There is, we maintain, a great deal of natural justice in this retort of the army. But let us see to just whom it should be addressed. Not to Anti-Imperialists. They did not order the subjugation of the Filipinos. They would not have had our men go to the ends of the earth to do repugnant work—for we know that many of our officers feel it in their very souls to be repulsive and abhorrent—under conditions which make the maintenance of discipline extremely difficult, if not impossible, and which directly tend to arouse and let spring every tiger-passion lurking in the heart of the enlisted men. No, it is the whole policy that is being enforced which is at fault, and which has brought the army set to execute it into disrepute. There is much force in the protests of the inculpated officers against the courts-martial ordered by President Roosevelt. Were they not doing the very work he commanded? Had he not given stringent orders to crush out the last semblance of insurrection? Had he not congratulated Gen. Bell on the success of his severe measures in Batangas? Then why not attribute the technical violations of the laws of war to an excess of zeal? This is not a military defence; but it is, we admit, something very like a moral defence—that is, as against those who condemn cruelty but persist in a cruel policy.

The real enemies of the American army are those who lay upon it a revolting task. It is upon the Government which orders troops to make a desolation and call it peace that the guilt of the incidental barbarities rests. And it is shared by the people behind the Government—the press and the churches and the universities—who do not protest against a mistaken policy, in the stupid clinging to which we have the real cause of all these woes. We admit that the horrors were never intended by any party, any President. But we have, with the best intentions, stumbled into them. Mr. McKinley was smilingly certain, as Andrew Carnegie has just assured us, that the idea of our ever having to fight the Filipinos was preposterous—they would "welcome us as their best friends." Yet from that hour of first mistake until now, the progress in wrong and severity has been continuous and fated. Executive orders from Washington have changed our army of emancipators into men under orders to make a barren waste.

It is the policy, not the army, that is at fault. The real authors of the dishonor of the army are the men who send it on dishonoring campaigns. The skirts of those are clear who withstood the whole error from the beginning, and who make their own to-day the language of Burke. He had, in his day, to meet the assertion that the dignity of the British nation would not allow it to withdraw from a false position. "Every hour you continue on this ill-chosen ground," he exclaimed, "your difficulties thicken on you; and, therefore, my conclusion is, remove from a bad position as quickly as you can. The disgrace and the necessity of yielding, both of them, grow upon you every hour of your delay."

THE SHIPPING DEAL.

As there was reason to expect, with so complicated an international "deal," the terms of the Shipping Combination are in many respects both novel and extremely interesting. By no means the least significant part of the arrangement is the contract with British shipbuilders. It will be remembered that apprehension was expressed by the English newspapers, when the Shipping Trust was first announced, as to what would be its effect on England's shipbuilding industry. Would the contracts of such lines as the White Star and the Dominion go, at some future period, to American shipyards? Would American interests, having so rich a prize within their grasp, allow Europe indefinitely to retain any part of it? What such a transfer, on an extensive scale, would mean to British trade may be judged from the fact that, while the whole world's construction of merchant ships in 1901 is estimated at Lloyd's as 2,617,000 tons, the British yards alone turned out 1,524,000. That is to say, nearly 60 per cent. of the world's construction came from the hands of English builders and mechanics.

The reported arrangements of the Ship Trust on this point can hardly, we should say, allay all misgivings among Englishmen. The "builders' agreement," as summarized by cable, guarantees to Harland & Wolff of Belfast all of the combination's orders for such new ships and heavy repairs as must be done in

British ship-yards. In return for this rather striking concession to a single building firm, the builders give the Trust a prior right to their facilities, agreeing to accept no outside contracts while the Trust is keeping their ship-yards busy. This will, however, strike the average observer as a rather one-sided understanding, especially as no formal agreement seems to have been made as to how much work Harland & Wolff shall be allowed. It is expressly stipulated that the agreement with these British builders shall not prevent the Trust from placing orders for new steamers and repairs at American ship-yards.

So far as the summary is any guide, the effect of the arrangement seems to be that the Ship Trust does not pledge itself to give to British builders any work beyond necessary repairs, but what it does give is to go to one firm only. On the exclusive contract there has been some angry criticism in the London papers. We shall await with no little curiosity the further comments of British builders and of the English press, which does not yet appear to us to have grasped the situation. It is, of course, well known that Harland & Wolff have hitherto done most of the work for the lines included in the sale as now announced. It is also true that, under present American law and practice, the Trust may choose to place its new vessels under British registry, and hence would go to British ship-yards. But if the Shipping Combination is looking to the distant future, with the progress of the American steel trade in efficiency and economy being what it is, then we should say that the building contract would provide some unpleasant matter for the reflection of Englishmen.

We have commented particularly on this phase of the announcement, not only because it is a new development, but because it seems to us fraught with important consequences. It is possible that, in some respects, later advices may throw further light on this part of the arrangement. As regards the purely financial side of the contract as reported, the essential fact developed is that very large sums of money had to be pledged to close the "deal." One-fourth of the price agreed on for the White Star purchase is to be paid in cash; in addition to which it is stated that $27,580,000 cash is to be paid over to the American, Atlantic Transport, Leyland, and Dominion vendors. This arrangement, though not unexpected, has this interest, that it marks one line of variation from the Steel incorporation. That operation was a merger, pure and simple, in which the shares of the companies absorbed were merely exchanged, at a determined ratio, for the shares of the main concern.

The cabled details also confirm the statements of the "bonus" to the underwriting syndicate, regarding which London has hitherto shown so great incredulity. For its services in floating $50,000,000 bonds, this syndicate is to receive $2,500,000 in preferred and $25,000,000 common stock. The bonds are, however, supposed to have been already practically floated without the syndicate's intervention. We observe with some surprise that the $60,000,000 preference stock is to bear cumulative dividends. Considering the recent turn of discussion in the Steel Corporation's financiering, this strikes us as a matter for criticism. It has been intimated, in many well-informed quarters, that one strong motive in the partial conversion of the Steel preferred stock is the wish to get rid of share issues whose accruing dividends, in a series of possible lean years, must, if not paid, heap up as contingent liabilities against the future. If the Steel Corporation is endeavoring to correct original mistakes by its present draft on the credit of the corporation, how are we to regard the appearance of the same provision in the capital of the Shipping Trust?

Mr. Carnegie's opinion that "there is no question of patriotism" in the Shipping Combine, and that it is "purely a matter of money-making," undoubtedly sums up the case correctly. If Mr. Morgan's move had really been inspired by a notion that concentrated American capital could snatch away Britain's control of the Atlantic, then, we should say, the willingness of the English shipowners to coöperate in the plan would need explanation. The truth is that these gentlemen, as Mr. Carnegie intimates, had a motive quite apart from national considerations. What the situation of the ocean freight trade was, last year, is pretty generally known. The 'Annual Shipping Review' of Mr. John White of London, an authority in the trade, lately remarked of 1901 that, beginning with a decline of 30 per cent. in coal freights, the entire list of ocean rates had fallen throughout the year. Several American liners and some cargo boats were put out of commission; scores of vessels made half of the transatlantic trip virtually in ballast. The recent cut in the Cunard Company's yearly dividend from 8 to 4 per cent., and of the German Lloyd's from 8½ to 6, showed how the shoe was pinching. The review from which we have quoted advanced on its own account, last January, the suggestion that "a little of the spirit of combination" already applied in other industries might be extended with advantage to the ship-owners. By the same authority was made the rather startling estimate that 2,000,000 tons of shipping, or as much as the whole steam tonnage of Germany, is now engaged exclusively in ocean transport service for the Boer campaign. The war ended and the troops brought home, all these ships, of course, reënter the competitive merchant service.

All this shows very plainly why the owners of English lines were willing and possibly anxious to sell to Mr. Morgan's syndicate, when they received an inviting offer. But it does not seem to us that it throws much light on the future. Clearly, the difficulty of the trade has been overproduction of ships. Vessels newly constructed in 1901, in the face of diminishing profits, were estimated by Lloyd's Register at 2,617,000 tons, an increase of 1,200,000 tons over even 1897, and of 300,000 over even 1899. These figures cover the whole world's production; England's output alone was 1,524,000 tons last year, as against only 952,000 in 1897. In view of such comparisons, and with the African transport tonnage overhanging the market, it would ordinarily be supposed that the first act of the "Combine" would be to stop all new construction. But it cannot stop construction for outside owners; in fact, the very checking of orders from the White Star, American, and Cunard Lines would be apt to make building cheaper for competitors. The same perplexity will exist with regard to rates. As the London *Economist* remarks, the combination, with its enormous burden of capital, must work to raise ratner than lower ocean freight rates. But if it raises them arbitrarily, it opens precisely so much further the inducement to competitors. And there is no acquired "right of way" on the Atlantic. The problem is obviously new in several of its aspects.

HIGHER EDUCATION FOR THE NEGRO.

The recent meeting of the Southern Educational Conference at Athens, Ga., has given rise to much valuable discussion of the various phases of education in the South. If the Conference, as was to have been expected, had no new theories to advance, it has none the less rendered extremely valuable service in more ways than one, and particularly in laying stress upon the necessities of the public schools, white and black. Perhaps the most important of these needs is that of good teachers. The General Education Board recognized this by giving $19,500 to the State Normal and Industrial School for whites at Athens, which is, beyond all else, a teachers' fitting school, and the Board may be counted upon to assist similar institutions for the development of colored teachers. The mere prospect of similar gifts has served to revive the old discussion as to the value of the various kinds of institutions which are now training the colored youth of the South, and particularly the teachers of the future.

As to the worth of Hampton and Tuskegee there can be no doubt. The great opportunity of the negroes of the South lies in the tilling of the land. Upon this all are agreed who have gone

beneath the surface of the South's greatest problem. Tuskegee is expending its strength, above all else, upon the agricultural side of its curriculum, and next upon those industries which are most closely related to farm and rural life. Conversation with its students will show, we believe, that the majority have no other teaching in view than that given by every man or woman who leads an honest and industrious life. That many finally become teachers by profession does not detract from the fact that Tuskegee's primary aim is the development of men and women who can earn a good living in manual pursuits. Hampton, on the other hand, keeps always in view the training of teachers. Its course stops about two years short of the average Northern high school, and nearly one-third of the time is given to manual work or domestic training. Latin, French, and German are not included in the studies offered by the institution. Like Tuskegee, it turns out carpenters, blacksmiths, masons, engineers, and mechanics. When graduated, its scholars are prepared either to become useful industrial workers or very satisfactory teachers of the ordinary colored schools of the South.

With Atlanta, Howard, Fisk, and other universities the case is different. These institutions aim to supply an education such as is to be obtained at the well-known colleges of the North. Fisk, for instance, has its theological school, profits by a neighboring, if independent, medical school, and gives its pupils something of Latin and Greek, German, French, and Hebrew, the sciences, political economy, ethics, logic, psychology, music, the higher mathematics, etc. For offering such a course, it and similar institutions are frequently severely criticised, both North and South. Their case is further complicated by the fact that their teaching methods have not always been beyond criticism. Furthermore, there exist a number of so-called colleges, frequently of a denominational nature, which confer annually a large number of degrees that are wholly without value, and therefore misleading. The successful bachelors of arts from some of these institutions would have to study at least three years in order to pass the Harvard or Yale entrance examinations.

Overlooking the educational shortcomings of the bona-fide colleges, and making every allowance for the crying need of the hour—industrial training—it would seem as if there were to-day a genuine place in the South for two or three institutions for the higher education of the negro. No one can deny that the colored race is producing more and more men and women capable of being highly trained and of using well their learning. From the graduates of Fisk and its fellow institutions are drawn each year teachers and leaders. Tuskegee itself is indebted to the so-called colored universities for a considerable percentage of its instructors. Of Fisk's 371 living graduates, 8 are college professors, 75 are teachers in normal schools, and 154 teachers or principals of grammar schools. Of the others, 13 are in business, 20 are ministers, 9 lawyers, 17 doctors, 16 students in professional schools, and 9 are in the employ of the Government. Of the remainder only a few are unaccounted for, or are classified under the heading "living at home"—a creditable enough record.

Upon this question President Eliot's opinion is of as much value as it is on everything pertaining to education, and he has expressed his views in no uncertain language. In a speech at Boston in 1896 he declared that

> "If any expect that the negro teachers of the South can be adequately educated in primary schools or grammar schools or industrial schools, pure and simple, I can only say in reply that that is more than we can do at the North with the white race. The only way to have good primary schools and grammar schools in Massachusetts is to have high and normal schools and colleges, in which the higher teachers are trained. It must be so throughout the South; the negro race needs absolutely these higher facilities of education."

But the function of the colored college is not merely to influence those who actually enter its doors. As is the case with our Northern colleges, it exerts an uplifting influence upon the community in which it is situated, and this influence is not to be measured by the actual achievements of institutions as yet in the early stages of their development. Nor would the establishment of travelling scholarships entitling the holders to study at Harvard or Yale or other institutions of the North and West meet the needs of the situation. As is the case in our Northern white communities, and, in fact, the world over, a school for the teaching of the highest branches of human learning is the inseparable adjunct, as it is the apex, of any proper educational system. Who can measure the influence of Harvard and Yale upon the schools of all grades in the territory surrounding them?

Since the need for negro colleges would thus appear to be patent, the friends of colored education and the educated negroes themselves should bestir themselves to the end that in place of the many half-baked institutions two or three of sound growth may stand forth as the proper fitting schools for the men and women of promise. A college that is not even a proper preparatory school, like the high school which masquerades as a university, does inestimable injury to the cause of negro education. So, too, the long-established college which fails to use all its valuable apparatus or to employ its teaching force for the best purposes, and which lacks the true college spirit and ideals, causes many a good friend of negro education to forget that industrial training is not the only need of the hour.

THE FRENCH REPUBLIC STRENGTHENED.

The second balloting in the French arrondissements, which took place on Sunday, resulted, as was anticipated, in further gains for the Government. The two weeks' interval between the elections and the reballoting is the occasion for the application of all the political arts, and naturally the Ministry has the advantage of the bargaining. Accordingly, it is no surprise to hear that the Government has carried 128 out of the 168 districts for which returns have come in. Until the complete analysis of the voting is received, it is impossible to estimate the real strength of the composite majority which M. Waldeck-Rousseau brings back to the Palais Bourbon. This much is certain, that he has increased his normal majority of about eighty to considerably more than one hundred.

This means, first, that the Nationalists have not been able to persuade the country that M. Waldeck-Rousseau is the enemy of the army, and so of France; and, second, that the doctrinaire Progressists, who follow M. Méline, have failed to alarm the average voter on the subject of the Socialist alliance. From two very bitter attacks the Government issues unscathed. Regarded exclusively from the parliamentary point of view, the voting means that the support of the Socialists—whether "reds" or "yellows"—is no longer indispensable to the life of the Ministry, though it is hardly likely that the Premier will turn from the allies who have made his great success possible.

Persistent rumors that M. Waldeck-Rousseau will resign, and turn over the honors of the victory to another, fortunately lack confirmation. France could ill afford to lose her greatest Premier since Gambetta. In a most stormy period he has consistently exemplified a kind of high opportunism, the command of which is the supreme test of statesmanship. He found the country irritated to the last degree by imagined attacks upon the army, and the army in the hands of scoundrels of the Mercier type, whom no one dared displace. His appointment of Gallifet, the hero of the forlorn hope at Sedan, as War Minister silenced criticism and made the purging of the general staff seem the most natural thing in the world. Similarly, when he found that the Socialist alliance was a political necessity, he frankly accepted its conditions, and chose M. Millerand to be his Minister of Commerce—a Socialist, to be sure, but a man so moderate, so sagacious, so regardful of the conditions of great reforms, that his most sincere opponents have had little to criticise in

his conduct in office. Again, M. Delcassé in the Foreign Office displayed a decision and dash, both in the Turkish affair and in the *rapprochement* with Italy, which gave the lie to those who declared the Ministry was unpatriotic; while M. Paul Deschanel brought to the Presidency of the Chamber rare qualities of eloquence, and did much to raise debate above the level of routine or stark abuse to that of genuine political oratory. To sum up, M. Waldeck-Rousseau has trusted less to theoretical political consistency, or to ingenious compromise, than to the integrity and ability of the men of many minds who make up his Cabinet. This has given to his Administration a personal stamp and distinction which recalls the early days of the present republic—the Thierses, Ferrys, and Gambettas. Whether a successor could organize and control such a Cabinet is very doubtful, and this leads to the sincerest hope that M. Waldeck-Rousseau will remain and enjoy the fruits of the victory which he has so handsomely won.

Of course, the great political achievement of his administration was the taming of the Socialists. He found them a revolutionary party, but, through M. Millerand's teaching and example, soon detached from them a parliamentary group; and now, if the incomplete returns may be trusted, these moderate Socialists are going over to the historic Radical party. This tends to avert a social peril which the great strikes of the past year have emphasized, and certainly gives the remaining Socialists an undiminished hope of concrete legislative reform.

Historically, the Waldeck-Rousseau Government will be remembered as that which saw the complete downfall of the various monarchical and anti-Republican factions. A very short time ago the Legitimists, Orleanists, and Bonapartists at least had the prestige that attaches to aristocratic movements, and something of the glamour which invests impossible loyalties. To-day all that fading glory has for ever departed. The Monarchists of all degrees have let themselves be drawn in with a ruck of those who merely hate the Jew, or look for a vague man on horseback, or detest the established order because it is the established order. This crazy mixture of the Faubourgs Saint-Germain, Montmartre, and Saint-Antoine was essentially Parisian. The sober good sense of the provinces has rejected it absolutely, and the Nationalists in Paris itself, where they still have a large majority, only await for their political dissolution the hour, not long to be deferred, when they shall appear ridiculous to all men.

It would be a far easier task for a new Premier to rule France than it has been for M. Waldeck-Rousseau, but it is to be hoped that he will profit by the era of good feeling which he has brought out of the bitterness of the *affaire*. The opposition parties, so the Paris correspondent of the London *Times* relates, are so satisfied with the minor successes of a variegated campaign as almost to forget their beating. This is a rare condition in French politics, a condition which no one else is so likely to perpetuate as M. Waldeck-Rousseau. France needs him, for he has the knack of seeing beyond expediencies to policies, having what Talleyrand regarded as the final accomplishment of a statesman—a sense for the future—*L'avenir dans l'esprit.*

GIOSUÈ CARDUCCI.

FLORENCE, April 16, 1902.

The most precious New Year's gift received in January was the one-volume edition of the poetry of Giosuè Carducci, printed and issued by his usual publisher, Zanichelli of Bologna, after careful revision of every page by the poet himself. Though long practice has rendered it easy to find each favorite poem scattered through the numerous editions that have appeared, from the tiny volume of 1857 to the last of the series of Complete Works, published between 1880 and 1902, it is a thing of untold delight, and will remain a "joy for ever," to have all the poems together in a light and elegant volume arranged in chronological order from 1850 to 1900, with an alphabetical list of titles, and the notes at the end of each series.

The poems are divided into four series, as they were published in the latest of the former editions. In the very earliest, the *Juvenilia* comprised only those written between 1850-57, when Giosuè, from his fifteenth to his twenty-first year, was, as he tells us, the "armor-bearer of the classics," when he sought in Horace and Virgil the secret of Italy's grandeur, and hoped from their teachings to reawaken her to desire at least her moral and literary regeneration. Later he added to this "juvenile collection" all the patriotic poems inspired by the joy of feeling Italy in action; and recognized in her heroes, Victor Emanuel, Garibaldi, and the rank and file of their followers, worthy descendants of the martyrs and heroes of antiquity. 1860 closes this period with the "Ode to Sicily and the Revolution." Here at the end are the four lines in which he then, as he thought, bade adieu to poetry:

> "Io di poveri fior ghirlanda sono,
> Ed Enotrio a le dee m'appese in dono;
> Qui l'arte deponendo e il van desio,
> Altri chieda la gloria, ed io l'oblio."

After the liberation of Naples and the close of the revolutionary era, the Kingdom of Italy appeared to him the "kingdom of ugliness, the glorification of mediocrity." He still tried to guide his "ideality along the Via Sacra. But it was useless. The poor beast went lame, brayed and kicked and tried to bite, went zigzag—getting scratched in the hedges—to feed on thistles," so he "left it to its caprices and the wiser beasts to their triumphs," and withdrew to the solitude of his own thoughts, resolved to lay aside all poetical ambition and to devote all the energies of his intellect to literary history and philology. "It would have been better," he says, "if I had kept to my resolution and left poetry alone." But his studies brought to light a fact which at once surprised and consoled him. He found that his own repugnance to the literary and philosophical reaction of 1815 (against "classicism, the old pagan libertine," which Manzoni was supposed to have demolished), really harmonized with that of many illustrious thinkers and writers. "Thus my first instinctive sentiment of opposition became a confirmed belief, conception, reason, affirmation. The hymn to Phoebus Apollo became the hymn to Satan." He did not seek poetry, but let poetry come to him—

> "Il mio canto miglior sempre è quel desso
> Qual non fece mai";

and his best song is ever the unwritten one. So "Levia Gravia" (1861-1871) came "from his mind matured in understanding and sentiment." These poems are divided into four books, the first and third containing each twenty-five sonnets; the second and fourth each twelve, besides lyrical compositions on various subjects. As a preface, the poet addresses his muse in a poetical epistle. "In these times, when art has become cyclopic, who will give you—nurtured on the crumbs of Horace—an asylum? This is not weather to go a-gadding in. Ill luck will befall you; follow my advice—Go back home; avoid contests." And here he tells his book the names of all the enemies awaiting it, because the "loves it treats of are those of other days, which do not sanctify lust; do not deck Venus with a rosary; nor commit adultery while preaching sermons." Then we have portraits, drawn from nature, of Tuscans and Italians of the period, the Naldos and Poldinos, renegades in politics and religion, "who exchange the red cap of liberty for one fashioned on the model set by the prefect."

Critics there arose, stupid and sapient, honest and envious, but all competent judges in Italy repeated, "Unto us a poet is born." "Juvenilia" occupies 265 pages, "Levia Gravia" 100. "Satan" stands apart in his glory. Then come the "Giambi ed Epodi," in which some of the poems written between 1867 and 1871 are inserted. The prologue is sad, but not morbid, and the poet keeps his promise to flagellate all the false idols that the world adores. The form is classic, but how modern the subject-matter! The odes to Edward Corazzini, who died of wounds received at Mentana, "To Bologna, on the 20th anniversary of the famous defence of August 8, 1848," to Giuseppe Monti and Gaetano Tognetti, did more to hasten the popular clamor for the destruction of the temporal power than any agent save the fact of Mentana itself and the brutal orgies of French and Papal assassins. Terrible the satire of "The Song of Italy going to the Capitol." The sonnet to Mazzini is a statue in bronze. The lines written when Mazzini dies are bitter with the bitterness of the mourner who believes that "death only is eternal," with no hope of after life. These "Giambi ed Epodi" run from 1867 to 1879. An intermezzo divides these from the "Rime Nuove," among which are some of the most perfect of the sonnets, for example, "Ora e sempre," "The Ode to Victor Hugo," and the immortal "Ça ira." Then come the first and second books of the "Odi Barbare," of which it would be a profanation to speak in haste. A few translations come next, then "Rime e

Ritmi," at the end of which is the "Congedo," not written, as the reviewers seem to think, last December, when such an adieu would have had a sad significance, but published in 1898, when the poet's health was robust, and only a passing melancholy could then have dictated the sadly sweet *Rispetti:*

"Fior tricolore,
Tramontano le stelle in mezzo al mare,
E si spengono i canti entro il mio cuore!"

The book closes with the "Parliament," part first of the "Canzone di Legnano," commenced in 1879, and left unfinished still. Three hundred and sixty-five poems in all; yet they reflect half a century of artistic, poetical, literary, political, and social life, lived through and watched and portrayed by one of the noblest, most gifted patriots of the age that moulded into fact the dream of ages, a poet and a teacher who has ever sought "beneath the strata overlaid by time" for the good, the true, the beautiful, the *real.*

This volume of poetry is not the only gift from the Master in 1902. After four years' interruption the eleventh volume of the Complete Works (which are to consist of twenty) has arrived. It contains the third and last collection of "Ceneri e Faville," which the author calls poor trash (*misere bucchiche*), a title that few will confirm. The first of these "Ashes and Sparks," published in 1891, contains some interesting reviews written to order for the *Nation*, the arch-moderate newspaper of Florence in and after 1861. The second collection contains the fugitive prose pieces scattered between 1871 and 1876, and commences with the exquisite commemoration of the volunteers of the Vosges, "A Year after the Three Days of Dijon." In this newest and third collection, there are counsels and sentences worthy to be taken to heart by the youth of Italy to-day. Carducci's speech in the Senate on Candia and Greece is perhaps the gem of the eleventh volume, which is to be followed at once by the twelfth, more "Battles and Confessions," and the thirteenth, on Parini.

For the last three years, notwithstanding his arduous duties as Professor of Literature in the Woman's College of Florence, where examinations are held and diplomas are conferred, Carducci's beloved disciple and devoted friend Severino Ferrari, going to and fro between that city and Bologna, assisted his master regularly in the University lectures, the whole of which are often too much for his strength. "If I could have Severino and insure the unity and security of my library and manuscripts," he said to an intimate friend last year, "no other worldly concerns would worry me." The first desire was gratified by Professor Nasi, the present Minister of Public Instruction, who appointed Ferrari Professor of Style in the University of Bologna, where he will still continue to help his master with his literary classes. And as soon as the dowager Queen Margaret heard of his anxiety about the valuable library which, with much tribulation, especially in his boyhood and youth, Carducci has collected, she came forward at once offering to purchase it, leaving it for the poet's use during his lifetime, then to the city of Bologna, which we trust may long await the heritage. Queen Margaret, the most cultured woman in Europe now that Victoria, Empress of Germany, is no more, gracefully performed the act she was fitted and worthy to conceive. She is now the proud possessor of that magnificent library—of the Foscolo which the poet carried to his mother, mounting the stairs on his knees; of his first copies of Horace, Virgil, Dante, Petrarch, Alfieri, and the Berchet which he learned by heart at that mother's knee; of all the books that have nurtured the poet, the prose writer, the Master of Italian youth beloved; of his university lectures, his manuscripts, many yet unpublished.

The contract was signed yesterday in the bright, spacious studio looking across the plains to the Bologna hills where, with his books, the poet chiefly dwells, save when he escapes to drink in a breath of Tuscan air and alights in Florence, as he did last Easter Monday, delighting our hearts, which tremble between the last vision and the next one hoped for. Count Malvezzi for Queen Margaret, Count Dall' Olio, the Mayor of Bologna, for Carducci, the notary and the faithful Zanichelli for chief witness, gathered there. The partner of his joys and sorrows, Elvira, the mother of his dead Dante, was present, as he chose she should be, and with her the widow "Bice" and her four children, for whose fatherless sake the grandfather could not *give* his one chief possession to the city which he loves. One of these, the second Elvira, will next year go in for the degree with honors at the University. "Laura," too, was there, with her one girl and boy, Giosuè. And in their presence the poet signed the contract ceding to the dowager Queen the whole of his literary possessions (save, of course, the copyright of his works) for 40,000 lire, the sum already deposited insuring 2,000 lire per annum during his lifetime. J. W. M.

Correspondence.

A CHANCE FOR "EQUITY."

To the Editor of The Nation:

Sir: Why is "Equity" silent? Is not the time opportune for another comparison of the barbarous system of the British in warfare with the humane methods of Americans?

He might well contrast the savage ferocity of Lord Kitchener, as shown by his inhuman instructions to demolish the tomb of the Mahdi, with the beneficent order issued by Gen. Smith to mercifully dispose of all the inhabitants of Samar who are too old to learn American principles of justice and humanity. Or he might compare the "horrors" of the South African refugee camps, as disclosed by Miss Hobhouse, where, by the guilty negligence of English officers, female donkeys destined to afford sustenance to Boer babies were allowed to stray away and the unfortunate infants compelled to drag out a miserable existence on common cow's milk, with the Batangas method, by which one-third of the population are provided for so effectually as no longer to need milk of any kind, and the rest plentifully provided with *water.*

He should by no means neglect the opportunity.—Respectfully,

Arthur Johnston.

Santa Ana, Cal., May 3, 1902.

A FRIENDLY MONITOR.

To the Editor of The Nation:

Sir: I should be greatly obliged if any of your readers could tell me where I might gain access to a pamphlet entitled 'A Friendly Monitor,' published in Philadelphia in December, 1819, and republished in September, 1822. It was written presumably by William Jones, President of the Second Bank of the United States. I am trying to write a history of that institution, and should like to use this pamphlet in that connection, but have been unable to find it.—Yours truly,

Ralph C. H. Catterall.

University of Chicago, May 3, 1902.

BREWSTER AUTOGRAPH IN WISCONSIN.

To the Editor of The Nation:

Sir: Interest in autographs is of decidedly modern growth. The word "autograph" in the sense of signature has been detected in English by the multitudinous readers for the Oxford Dictionary in no author earlier than the elder Disraeli. Thus the specific use of the vocable began less than a decade before the year 1800. When regard for the Pilgrims took an autographic turn, the signature of William Brewster was at once brought to light on a deed in the Record Office at Plymouth. There was, however, unexpected difficulty in unearthing a duplicate, so that, after much search and research, the writing in the Old Colony archives came to be considered the unique autograph of Elder William Brewster, whose house was the first cradle of the first church of the Pilgrims (Bradford, p. 490).

Notwithstanding, about 1857 some one in Yale College Library, opening Cartwright's 'Harmonia Evangelica,' which had long slept soundly there in its own sheets, read on the title-page *Will'm Brewster*, and on the left of the name the phrase, *Hebel est omnis Adam*, which, though the late Mr. Justin Winsor did not know it, is found word for word in the fifth verse of the Thirty-ninth Psalm. The phrase is considered by Gesenius an independent clause, and translated "A breath is every man." More literally, "All man all breath."

A third autograph with the same motto was soon afterward exhumed at the Boston Athenæum in a Greek folio of Chrysostom (Basle, 1522). This book is further inscribed "Ex bibliotheca avi mei, July 1644. Thomas Prince [a son of Brewster's daughter]." A fourth autograph next rewarded the Rev. Dr. Dexter, who ferreted out *Will'm Brewster*, but not the Latinized motto, in a 'Treatise on the Ministery [*sic*] of the Church of England, 1595 [no mention of place], by Francis Johnson, Pastor of the English Church in Amsterdam.' This book seems to have been bought before the Elder had adopted his book motto.

This quartet was supposed by Winsor, in his 'Narrative and Critical History' (vol. iii, p. 287), published in the middle of the eighties, to include all autographs extant. Yet two more Brewster signs manual were in reserve for him. One autograph with motto had been long lurking close by him in a neighbor's house at

Cambridge. The name and motto gave him a glad surprise in 1887. They were written in the commentary of 'Paraeus in Genesin Mosis, Frankfurt, 1615.' The other it was his fortune to read, both name and motto, on a folio translation of 'Seneca's Morals' by Thomas Lodge (London, 1614), owned by Mr. McClellan in Woodstock, Conn.

These six were the only Brewster autographs described by Mr. Winsor in his monograph of 1887 in the Massachusetts Historical Society's Proceedings. So far as can be ascertained, they formed the total of discovery after a century of search, until a seventh appeared in April, 1902, some fifteen years after the last windfall.

Miss Elizabeth Goffe Ticknor, now a student in the University of Wisconsin, then brought to her professor of history, Frederick J. Turner, an old book, which had long been an heirloom in her home, which is with her mother and grandmother in Madison. Her volume is a relic of the self-same Francis Johnson who wrote the work, the delight of Dr. Dexter's old age, discovered by himself, as before stated, with the fourth-found Brewster autograph—and the first one that had not been entombed in a public institution. This Wisconsin treasure-trove shows on its title-page *Will'm Brewster* and *Hebel est omnis Adam* with not one letter in either of them obscured. The book itself, however, with no covers, the last four leaves in tatters, and all pages after 320 wanting altogether, recalls Shakspere's unregarded age in corners thrown. The gist of the title-page, where the words are 220, is as follows: 'A Christian Plea,' in capitals. By way of subtitle, its three treatises are: (1) "Touching Anabaptists," etc., pp. 1-210; (2) "Touching Arminians," etc., pp. 210-244; (3) "Touching the Reformed church with whom myself agree," etc., pp. 244-320+. "Made by Francis Johnson, Pastour of the ancient English church now sojourning at Amsterdam in the Low Countries." The next line shows six golden words which glorify the whole volume, "Hebel est omnis Adam, Will'm Brewster. Printed In the yeere of our Lord 1617 [no indication of place]."

Here was the first discovery of the desiderated name in a second book by the same author. A copy of this work stands in the British Museum, marked in the catalogue *Brownist*, 696, b23, 1. His earliest publication is dated as 1600 in Allibone, but his book in Dr. Dexter's library bears the date 1595. He was in Middleburg 1593-99.

The chain of title to several of the Brewster volumes with his autograph is quite complete. No such evidence of either genuineness or authenticity is needed in respect to the present seventh autograph—nor can it be furnished. Still, the antecedents of the new-found rarity, so far as known, deserve record. Mrs. Olive Ticknor, residing in Madison, was the legal owner of the volume containing the seventh autograph until April 15, 1902, when she allowed it to be stamped "State Historical Society of Wisconsin, No. 117, 590." Born in 1819, her maiden name was Olive Kendall. Her father, Thomas Kendall (born 1786, died 1831), was the son of the Rev. Thomas Kendall, who was born in 1745, in Hopkinton, Mass., died 1836 (Daniells's 'Oxford,' p. 564). Mrs. Ticknor, who was seventeen years old at her grandfather's death and living in the same house with him, believes the volume to have been then long in his possession. Further genealogical research may shed light on the steps of its transmission, after many a halt and hazard, to a permanent home, where dangers of loss or perishing are reduced to a minimum. Three of the six autographs before known—those at Yale, Plymouth, and the Boston Athenæum—may be equally secure, but the other three, so long as they remain in private hands, cannot be. Four of the six were found in Massachusetts, two in Connecticut. It will for ever be a joy to Wisconsin that in her capital was found the first Brewster autograph outside of New England.

Madison, Wis., April 21, 1902.

GERMAN ATTENTION TO AMERICAN UNIVERSITY WORK.

To the Editor of The Nation:

Sir: The managers of the *Deutsche Litteraturzeitung*, recognizing the ever-increasing value of the work of American universities, are desirous of keeping their German readers informed as to this work. With that object in view, they now make a request that news of the universities and notices of important publications be sent to them. In order to spare trouble to those thus favoring them, they have arranged with the undersigned to attend to the forwarding of all such notes and reviews. Any one wishing to publish a review of a book in the *Litteraturzeitung* will kindly communicate with the undersigned. Any one desiring a book reviewed by the management of the journal will please mail it directly to the editor-in-chief, Prof. Dr. T. Hinneberg, Berlin W. 64, Behrenstrasse 5.

It is hoped that this new departure, in addition to proving of unquestioned interest to Germans, may serve to introduce the work of Americans to a wider and more appreciative circle of readers than, perhaps, has been enjoyed heretofore.

Albert Haas.

Bryn Mawr College, Bryn Mawr, Pa.

Notes.

The widow of the late E. J. W. Gibb, author, as our readers are aware, of a notable 'History of Ottoman Poetry,' has gathered together a number of his pieces under the title of 'Verses and Translations,' and they will be published for private circulation by Frederick W. Wilson & Co., No. 57 Hope Street, Glasgow, Scotland. The translations are from the French, German, and Turkish.

From Doubleday, Page & Co. are forthcoming a posthumous work of Sidney Lanier's, 'Shakspere and his Forerunners: Studies in Elizabethan Poetry and its Development from Early English'; 'Spiritual Heroes,' by David Saville Muzzey; 'The Rebuilding of Old Commonwealths,' by Walter H. Page; 'Among the Water-Fowl,' by Herbert K. Job; and 'American Food and Game Fishes,' by David Starr Jordan and Barton W. Evermann.

'The Roll-Call of Westminster Abbey,' by Mrs. A. Murray Smith, daughter of the Dean of Westminster, which Macmillan is to bring out, is complementary to Dean Stanley's well-known monograph on that building.

Henry Holt & Co. will issue at once 'General Principles of Physical Science,' by Prof. Arthur A. Noyes of the Massachusetts Institute of Technology.

The Nassau Press, New York, announces for speedy publication '"Selling the Bear's Hide," and Other Tales,' by Charles Stewart Davison, and 'Gamelands of Maine,' by George N. Van Dyke.

John Lane will publish immediately 'Persian Children of the Royal Family: Being the Narrative of an English Tutor at the Court of H. I. H. Zillú's-Sultán,' by Wilfrid Sparroy.

A veteran among reprints is Siborne's 'Waterloo Campaign,' which dates from 1844 and is now brought out anew in a fifth edition (E. P. Dutton & Co.). The fourth edition was considerably abridged by Mr. Edward Arber in respect to the appendix and the notes, and apparently the present is a simple reissue of the fourth. The omissions will not detract from the interest of the narrative for the general reader, and Captain Siborne's old-fashioned rhetoric will perhaps heighten the enjoyment. All his prefaces are preserved. The maps are brought within the compass of a page. There are portraits of the chief actors in the campaign; but alas, there is no index.

The appearance of a new and enlarged edition of the third volume of Maclay's 'History of the United States Navy' (Appletons) synchronizes with the last hours of Admiral Sampson. The relation of this volume to the Schley court of inquiry prepares us for a review of that court's proceeding in the new part (appendix vii.), which closes with President Roosevelt's reply to Admiral Schley's appeal. Secretary Long's letter to President McKinley on the Navy Department's "persecution" of Schley will be found in appendix iii.

Dr. Francis H. Williams's authoritative work on 'The Roentgen Rays in Medicine and Surgery,' recently reviewed by us, has had a success surprising to himself and gratifying to his publishers (Macmillan). In three months the first edition was exhausted, and public demand had to be satisfied almost improvisedly, yet nearly fifty pages have been added, and give further details of apparatus and treatment.

For the second time in fifteen years, Prof. J. Laurence Laughlin revises his 'Elements of Political Economy' (American Book Co.), a text-book whose continued use is certainly matter of congratulation.

Under the editorship of Gen. J. G. Wilson, a volume has been issued by D. Appleton & Co., 'The Presidents of the United States, 1789-1902,' which will be found convenient for reference, and in several instances more than that. It consists in the main of the respective biographies prepared for 'Appletons' Cyclopædia of American Biography,' and when these are written by such authorities as John Fiske (the two Adamses, Jackson, and Tyler), James Parton (Jefferson), James C. Welling (Van Buren), John Hay (Lincoln), and Carl Schurz (Hayes), to mention no others, they evidently possess an intrinsic and literary value. Owen Wister writes especially the sketch of President Roosevelt. Gen. Wilson, in overhauling and completing the sketch of President McKinley, by the late

Joseph P. Smith, had better have omitted the apology for the famous extrusion of the Ten Thousand from the classified service. And had the task been undertaken at this date, instead of last autumn or last winter, we conceive that he might have altered into conformity with the truth as now revealed the passage concerning McKinley's burking of the Queen of Spain's promise of an armistice, and would also have dropped out of sight the President's prediction at Cliff Haven in August, 1899, "Rebellion may delay, but it can never defeat, the American flag's blessed mission of liberty and humanity."

In volumes xiii. and xiv. of Professor de Sumichrast's translation of Gautier (George D. Sproul), we find the "Travels in Russia and the Low Countries" rendered with the accuracy and picturesqueness already noted in connection with prior issues of this set. Little excision has been practised; but we cannot see any reason for the omission from "The Sea-Passage" of Gautier's graphic description of nausea—a *tour de force* of dramatic and vivid condensation. The beautiful illustrations that accompany the volumes are all marked with a modern stamp.

An additional volume in the "Versailles Historical Series" (Hardy, Pratt & Co.) contains the life and letters of the unfortunate sister of Louis XVI., known as Madame Elisabeth. In its extreme simplicity and naturalness the style offered no serious obstacles to literal translation. The above matter is accompanied by an equally faithful version of the Duchess of Angoulême's narrative, and a more stilted rendering of Sainte-Beuve's well-known essay.

The history of political theory is necessarily vague until the period is reached when the political consciousness is manifest in communities. Prof. W. A. Dunning, in his 'History of Political Theories' (Macmillan), wisely limits his field, and, ignoring primitive communities, devotes his first chapter to Hellenic institutions, dealing first with the Hellenic peoples in general, and passing on to the political philosophy of Plato and the 'Politics' of Aristotle. While there can be nothing new in such an exposition, Professor Dunning succeeds in giving an admirably clear summary. The range from the characteristics of the Hellenic city to the political philosophy of Machiavelli, with which the book ends, is wide enough. In his 350 pages the author presents a series of interesting studies. The history of political theory has hitherto been strangely neglected, and the present volume is at any rate an excellent introduction to the subject. Not the least valuable feature of the book is the bibliography; every chapter is strengthened by a list of select references, and the whole is furnished with a good index.

The convivial frontispiece to Cuyler Reynolds's 'Banquet-Book' (Putnams) prepares one for a very different sort of "classified collection of quotations designed for general reference, and also as an aid in the preparation of the toast list," etc., from that actually got together here. These country squires, with their long pipes and clinking glasses, are not likely to be in need of toasts like this—"Economy, the daughter of Prudence, the sister of Temperance, and the parent of Independence," or of gentle sentiments like this from Dr. Holland—"God gives to every bird its food, but does not throw it into the nest." Mr. Reynolds supplies a glossary of popular terms, from absinthe to wineglasses, and another of popular beverages, and a sufficiency of indexes, though that of authors has no page references.

On the whole, we should prefer to take our chances with 'Mrs. Seely's Cook-Book' (Macmillan), a manual of French and American cookery, well illustrated with photographs, clearly printed, and provided with chapters on the rights and duties of domestic servants, on dinners and dinner-giving. There is a table of weights and measures, but the author's French receipts take no cognizance of the metric system.

The volume of tributes of friends to the late Prof. Herbert B. Adams just issued from the Johns Hopkins University Press contains a portrait of Dr. Adams, with a sketch of his life by Professor Ely, etc. To this is appended a bibliography, 160 pages in extent, of the university department of History, Politics, and Economics, arranged by authors.

Mr. Alexis Everett Frye, our first apostle of education to Cuba, has prepared for Ginn & Co. a 'Grammar School Geography' of the customary atlas form. We select it (among the throng) for remark because of the wholesome revolt against half-tone cuts here exhibited, and the return to woodcuts, of course using the photographic base wherever possible. These cuts are surely a pleasant relief to the eye, and they permit the reëmployment of paper not having the sight-destroying gloss needful for half-tone printing. This reaction is very significant and encouraging.

A very modern interest attaches to a solid work of erudition by Prof. Pietro Toldo of the University of Turin, 'Études sur le Théâtre Comique Français du Moyen-Age et sur le Rôle de la Nouvelle dans les Farces et dans les Comédies' (Turin: Loescher). This study is concerned with the relations between the drama and the novel in French literature from the Middle Ages to the present day. "The farce of the fifteenth and sixteenth centuries is, in most cases, scarcely more than a *fabliau* which has been given the form of dramatic action; the procedure of those who in our own day take the subjects of their dramas from popular novels, while a more complicated process, is, after all, identical in method." This, however, is merely a suggestion of the preface, and the main body of the work is devoted to a minute comparison of the two genres as they influence each other in successive centuries. Signor Toldo's chosen field in his previous researches has been the French Renaissance, and he has done much pioneer work in establishing its relations to the Renaissance movement in Italy. The present study, which is reprinted from the 'Studj di Filologia Romanza,' was originally intended for publication in France, and this, besides the nature of its subject, accounts for the fact that it is written in French.

The State of New Hampshire is still promoting the conversion of "abandoned farms" into "summer homes," and any one concerned in this process should address himself to Mr. N. J. Bachelder, Secretary of the State Board of Agriculture, at Concord, not as a negotiator, but as the distributor (gratis) of a pamphlet list of such farms. That for the current year fills 52 pages, each farm being minutely described by its owner, and having its fixed price. A State map accompanies the list.

Prof. W. H. Pickering, in his article, "Is the Moon a Dead Planet?" in the May *Century*, presents in popular fashion some of the very striking results of years of observation of our satellite through the clear skies of Peru and Jamaica, where the atmosphere is so steady as to enable the use of very high magnifying powers with the telescope. The few examples of actual apparent change which he describes are the outcome of many hours of study and many nights of consecutive watching. They illustrate what may be termed the new selenography—that is, the selenography which consists, not merely in mapping cold, dead rocks and isolated craters, but in a study of the daily alterations that seem to take place in small selected regions. Herein Professor Pickering thinks he finds real, living changes that cannot be fully explained by shifting shadows or varying librations of the lunar surface. Organic life resembling vegetation he finds, though not necessarily identical with it—coming up, flourishing, and dying, just as vegetation springs and withers on the earth. Snow, too, or hoar-frost he finds much evidence of; as well as a fair degree of volcanic activity.

Polar expeditions are the predominant feature of the *Geographical Journal* for April. There are three articles on the British ship *Discovery*, descriptive of her scientific equipment and the noteworthy incidents of her voyage to the Antarctic. The means for carrying on the scientific work of the expedition are very complete, and include kites, balloons, and a xanthometer, an instrument for measuring the ever-varying color of the sea. The ship touched at Trinidad Island, and a partial exploration resulted in the finding of a new species of petrel. Baron E. von Toll tells of the Russian Polar expedition under his lead, and Capt. Amundsen, a Norwegian, gives his plans for an expedition next year to the north magnetic pole, near which he proposes to pass two winters in a snow-hut. Somewhat akin to these, so far as ice and snow are concerned, is Mr. Douglas Freshfield's narrative of his explorations of the glaciers of Kangchenjunga in the eastern Himalaya, which is illustrated by some striking reproductions of photographs by V. Sella. One of these, showing the whole range, was taken from a height of 17,000 feet. A sketch of Professor Agassiz's recent cruise among the Maldives, during which he studied their physical geography and made some biological researches, contains the result of his observations upon the atolls. They "point to the uselessness of our present definition of atolls, as every possible gradation can be seen between an open, crescent-shaped bank and an absolutely closed ring of land."

—Mr. Lewis Einstein's 'The Italian Renaissance in England' (Columbia University Press; The Macmillan Co.) is a good specimen of full-bodied research. The Renaissance has been so long a name to conjure with in history, in literary scholarship, in art criticism, and in the pleasing parlor lecture, that one enters upon the reading of a new book about it with some misgivings. But whatever doubt one may feel in the present instance will speedily

be dispelled. Mr. Einstein's work justifies its existence by drawing on many manuscript sources which have hitherto been inaccessible to most scholars, and by embodying the results of much careful investigation in an admirably comprehensive study. Scholars have too often thought of the Italian influence on Elizabethan England as chiefly exerted by and in books. They have tabulated long lists of English versions of Italian authors, and they have traced the copious borrowings from the Tuscan muse which gave form and color to Elizabethan dramatic and lyric poetry. It is the merit of the present work that it presents a conspectus of the social, commercial, and literary relations of Italy and England in the fifteenth and sixteenth centuries, which should prove informing even to specialists in the history and literature of the Renaissance. Italian humanism was brought to England by scholars, courtiers, and travellers. To each type Mr. Einstein devotes a chapter, filling in his record with a wealth of suggestive detail. This first period of Italian influence Mr. Einstein rightly conceives to culminate early in the sixteenth century. Then began the "Italian danger," with the emergence of the Italianate Englishman, the influx of Italian merchants, and the spread of Italian political ideas. The account of this period in the Italian movement is skilfully managed, and the reaction which appeared in popular feeling and in such works as 'The Subtlety of Italians' is analyzed with a good deal of insight. The final chapter, upon the "Italian Influence in English Poetry," is not notable for original contributions to our knowledge of the subject, but it is adequate and readable. Excellent reproductions of rare portraits of some of the worthies mentioned lend an appropriate touch of human interest. There is perhaps a certain lack of conclusiveness in the book as a whole which may prevent it from serving the need of the less informed reader, but one who, already knowing something of the field, wishes at once to extend his view and to particularize his knowledge, will read it with pleasure and profit.

—Mr. Edward Clodd's 'Thomas Henry Huxley' in the "Modern English Writers" series (Dodd, Mead & Co.) is a superfluous book, and it is made so less by the Huxley 'Life and Letters' than by the admirable sketch of Huxley's life and work by Mr. P. Chalmers Mitchell, which was published simultaneously with the 'Life and Letters' two years ago. It is true that Mr. Clodd, writing after the 'Life and Letters,' has been enabled to enrich his pages with many references to that and quotations from it, but his approach to Huxley on his most serious side falls short of Mr. Chalmers's, and, while it seems hardly possible to exaggerate Huxley's controversial activity, Mr. Clodd does this in expressing his own sense of its relative importance. There is no such perversion of Huxley's temper as there was of Darwin's in Grant Allen's very disagreeable 'Charles Darwin' (1885), but there is something of the same intrusion here and there of the writer into his subject's place. This is most distinctly so in the fourth chapter, "The Controversialist," where, as nowhere else, Mr. Clodd's foot is on his native heath, and he almost forgets that he is writing of Huxley in the joy of his own battle with the clericals and supernaturalists. It is significant that while this chapter covers sixty-six pages, the next following, "The Constructor," covers only twenty-two. The arrangement of the book is topical, and, preceding the subjects named, we have "The Man," "The Discoverer," and "The Interpreter." Such a division of topics without confounding the substance is too difficult to be a complete success. Especially were the interpreter and controversialist one and the same to a considerable extent. But by "The Controversialist" Mr. Clodd means preëminently and almost exclusively the hero of the big fight with Gladstone. This is overworked, while the "Romanes Lecture" incident is slurred, notwithstanding its much greater importance. When we read of the "tribulation" through which Huxley entered the kingdom of intellectual freedom, and remember how Bishop Wilberforce fared in the Oxford encounter, and some others in their turn, it appears to have been Huxley who swung the thresher's flail, his enemies whose chaff was separated from their grain.

—The Marquis d'Argenson and Richard II., whom Mr. Reginald Rankin associates in the title to a volume of essays (Longmans), have obviously little to do with each other. Both, however, are fair subjects for the historian, and we need demand no further unity of motive. Each study is complete in itself, and, taken together, the two fill out a good-sized, handsomely printed book. It is not one which will sell so fast as Mr. Rankin's story of his South African experiences, 'A Subaltern's Letters to his Wife,' but the workmanship is of good quality and will do the reputation of its author no discredit. Of the two essays, "D'Argenson," though the shorter, is in our judgment the better. While Mr. Rankin's sketch of Richard II. is more notable for its agreeable style than for depth of research, his criticism of D'Argenson is both well written and scholarly. The subject is also an attractive one at the present day, for the ideas and aspirations of this French statesman appeal more to our own age than they did to the eighteenth century. Honesty and broad-mindedness were virtues which French politicians lacked in the reign of Louis XV., and which have not always been cultivated with conspicuous success by prime ministers of recent generations. These things D'Argenson had, and of late his career has recalled to many the saying of Plato that kings should have philosophers for their advisers. Alas, as Ralph Hythlodaye pointed out to Sir Thomas More, the King, though he have the philosopher at his elbow, may not listen to him. In an age of bribes and jobs, D'Argenson was incorruptible, and he foresaw one-half of the political developments of the nineteenth century; but he did not succeed in practical politics. The present tendency is to ascribe the fault more to the surroundings and less to the idealist. Nevertheless, D'Argenson had palpable limitations, to which we must not be blind. For instance, he lacked indomitable purpose, and he showed a fatuous disregard of those who might easily thwart him. His most amiable trait was the sincere humanity which can be seen in all his words and acts. Mr. Rankin hits the mark when he says: "The Marquis d'Argenson had few of the heroic virtues; his actions often contradicted his professions, his words were often but a gross and disordered reflection of his true mind. But he sympathized with the sufferers of his own generation, he loved all that was great in the past, and his sympathy and his love begot in his heart the image of Freedom."

—The second edition of the German collection of copyright statutes and treaties, 'Gesetze über das Urheberrecht in allen Ländern nebst den darauf bezüglichen Internationalen Verträgen' (Leipzig: G. Hedeler), has had the advantage of the editorial revision of Prof. Ernst Röthlisberger, one of the secretaries of the International Copyright Bureau at Berne. The volume has been doubled in size (from 263 to 418 pages), chiefly by reason of the extended area of inclusion. With the exception of the United States, the first issue contained legislation by European countries only; whereas this new edition, besides the addition of four minor European principalities—Luxembourg, Monaco, Montenegro, and San Marino—includes seventeen Central and South American States, Hayti, Canada, Egypt, Tunis, the South African Republic, New South Wales, and Japan. The latest statute included in the former (undated) publication was the United States act of March 3, 1891, while the present work contains special copyright enactments subsequent to that year by Austria (1895), Brazil (1898), Costa Rica (1896), Germany (1901), Japan (1899), Luxembourg (1898), New Zealand (1896), Norway (1893), Salvador (1900), Sweden (1897), and Venezuela (1894). Forty-eight countries are reported on altogether, of which thirty-six have special copyright legislation now in force, dating from 1735 (Great Britain) to 1902, on the first day of January of which year the important new German law relating to copyright in literary productions and music (enacted June 11, 1901) and the complementary "Verlagsrecht" (enacted June 19, 1901) went into effect. The printing of the volume was just completed, probably, before the enactment, on March 11 last, of the important amendment to the French law of July, 1793, which extends its protection to works of sculpture and ornamental art.

—The book is divided into two parts, each arranged alphabetically by countries. The first contains the Constitutional provisions and sections of the civil and criminal codes relating to literary and artistic property, together with the decrees, ordinances, and legislative enactments now in effect regarding copyright; while the second part contains the texts of the Berne Convention (1887 and 1896), the treaty of Montevideo (1889), and such copyright treaties as are now in force between individual states. No attempt has been made at elaborate annotation, but brief, useful notations occur, and in a few cases the texts of amendatory acts are interpolated in italics. The bulletins of the United States Copyright Office have been translated entire in the case both of this country and of Canada, not only for the laws in force, but also for the official information relative to copyright registration in both countries. In lieu of the texts of the numerous copyright acts of Great Britain, a translation has been supplied, slightly compressed and with the "illustrations" omitted, of the valuable Digest of the English law of Copyright

made for the British Copyright Commission of 1878. In view of the intricacy of the legislation treated and the consequent desirability of an authoritative exponent, it was a pity to omit the name of the eminent jurist, Sir James Stephen, who was responsible for this useful work. The subsequent British acts of August 10, 1882, June 25, 1886, and July 5, 1888, have been added. The British colonies are represented only by Canada and the act of September 24, 1896, of New Zealand, no mention being made of the legislation on copyright of India, New South Wales (1879), Queensland (1887), South Australia (1878), Tasmania (1891), Victoria (1890), and West Australia (1895). This excellent work cannot supplant the admirable compilation by MM. Ch. Lyon-Caen and Paul Delalain ('Lois Françaises et Étrangères sur la Propriété Littéraire et Artistique'), which is brought down to 1896, with scholarly introductions and extended annotations in two octavo volumes and a supplement; but for the reader of German it is a handy compilation, lacking only a subject-index.

—The statement which appeared recently in the Berlin papers, that the last remnant of the city's mediæval wall not already torn down or incorporated in other structures was removed only a few weeks ago, seemed to imply an incredible antiquity, so modern is Berlin in every aspect. And yet this mediæval wall is said to have been built about 1230. A trifle less than a century later, its straight line was broken to permit the enlargement of the choir of the cloister church. Just back of this choir an obtuse angle was made in the wall, and here, sheltered from view behind the church, stood that fragment which has just been removed. And still the testimony of history may practically be disregarded, for that portion of Berlin which can lay claim to considerable age is so small, and has been so thoroughly changed by later building operations, that the city may be justly called modern. For example, its population amounted in round numbers to only 20,000 at the beginning of the last decade of the seventeenth century. At the end of the reign of Frederick the Great it was but slightly over 140,000, and in 1860 had merely reached its first half-million. Since then, and especially since the close of the war with France, its growth has been enormous, so that the city with those suburbs which really form a part of it, although under different municipal government, now contains more than 2,000,000 inhabitants. Berlin is therefore as young as Chicago. In fact, in rapidity of growth and in many phases of their vigorous life and public spirit, these two cities form an interesting parallel.

MACAULAY AND HIS CRITICS.

Macaulay: A Lecture delivered at Cambridge on August 10, 1900, in connexion with the Summer Meeting of University Extension Students. By Sir Richard C. Jebb, M. P. Cambridge (Eng.): University Press; New York: Macmillan.

Lord Macaulay. By H. D. Macgregor. Cambridge: University Press; New York: Macmillan.

How does it happen that Macaulay, who, to judge from the extent to which his works are read, has been and is the idol of the English people on both sides the Atlantic, has, for the last thirty or forty years, aroused the censure, not to say the aversion, of critics who claim to represent education and culture? The time has come for attempting a reply to a question of considerable curiosity, and, to persons interested in the flow and ebb of opinion, of a certain importance. The period of indiscriminating admiration and the period (certain to follow it) of exaggerated censure have passed away. Sir Richard Jebb's exquisite and impartial apology is a sign that a master of style and a scholar of the highest culture can, while admitting the limits, also recognize the rareness and the brilliancy of Macaulay's genius. Mr. Macgregor's painstaking study of Macaulay's writings is a proof that, at Cambridge at any rate, young men just entering into life have no wish to detract from the reputation of the most popular among English historians, but desire to understand what is the permanent rank to be assigned him in the world of English letters. Under the guidance of a critic so skilful, so fair, and so subtle as the Regius Professor of Greek in the University of Cambridge, it is possible to answer with some confidence the question which we have propounded, and to show that the quarrel between Macaulay and his critics is due in the main to two causes.

First, Macaulay's tone and the very texture of his genius were antipathetic to the men who, in the main, guided the educated opinion of England during the latter part of the nineteenth century. Nor need this fact excite surprise. Macaulay, born in 1800, belonged in character to the eighteenth century. There is profound truth in the paradox to be found somewhere in the writings of Mr. Leslie Stephen, that in England the eighteenth century lasted on till 1830; and Macaulay was heart and soul the man of 1830. In this he resembled the Whigs and the Edinburgh Reviewers. In virtue, indeed, of his genius, of his youth, and of his historical enthusiasm, he saw truths and sympathized with feelings unrevealed to and unshared by Jeffrey or Sydney Smith. His onslaught on the *à priori* and unhistorical method of political reasoning characteristic of the Benthamites not only exhibits a dialectical power to which even Sir George Trevelyan hardly does justice, but also breaks with the intellectual tradition of the eighteenth century, and anticipates the historical view of political science; his keen appreciation of the revival of civic and even democratic life due to the rise of Christianity is foreign to the ideas of Hume and of Gibbon, and generally Macaulay's youthful article on the study of history teems with notions usually placed to the credit of later writers, such, for example, as the suggestion made with much less moderation and force by Merivale and by Mommsen, that Cicero's or Sallust's account of the Catilinian conspiracy deserved no more trust than other official proclamations or party pamphlets that tell the story of a revolutionary movement which has been condemned by failure. And though Macaulay's strength did not lie in the criticism of art or of poetry, his fervent admiration for Lessing's 'Laocoon' and for Goethe's analysis of Hamlet's character shows that Macaulay as a critic had progressed far beyond the ideas of Jeffrey and his school. But though Macaulay shared to some extent the ideas of the coming age, he was at bottom a man of the eighteenth century; his optimism, his manly vigor, his decisive outspokenness, his admiration for material progress—which, however, as Sir Richard Jebb well points out, was to Macaulay and to Macaulay's contemporaries chiefly valuable as the sign of moral and intellectual improvement—the very tone of satisfaction and triumph which runs through his resounding sentences, all express the very spirit of 1832, and all jar upon the taste of the writers and critics who, in one form or another, represent the reaction of the nineteenth century against the rationalism of the eighteenth.

With the reaction, in any case, Macaulay had throughout his life nothing to do. One can hardly imagine thinkers with whose tone he had less in common than Carlyle, Froude, Newman, or Matthew Arnold. These men, who are mere samples of a whole body of writers, were in many points—and these points of vital importance—as opposed to one another as it was possible for one writer to be opposed to a writer of a different school. Yet, if you look at the sentiment of the nineteenth century as a whole, you may easily perceive that they all and each of them represent a reaction, if not of opinion, yet of feeling, and a reaction in which Macaulay had no share; and the same thing is true of thinkers of a different class from those already mentioned. John Mill and Mr. John Morley no doubt have carried on from some points of view the ideas of the eighteenth century. Yet it is palpable to any one who has studied their writings that Mill and Mr. John Morley (who would not, we imagine, repudiate the name of Mr. Mill's disciple) keenly sympathize with the feeling, if not with the creeds, of the nineteenth century. The attacks, then, made upon Macaulay by later critics are from one point of view simply part of the conflict between the intellectual revolution of the eighteenth and the reactionary movement of the nineteenth century.

Secondly, Macaulay maintained a conception of the proper function of an historian which is opposed to the ideals formed by a later generation of historical writers. To Macaulay, as to the greatest historians whom the world has seen, history was primarily narration; the perfect historian was in his eyes the writer who, having obtained knowledge of past events, placed them in due order and proportion before the eyes of his readers. The object of history is, on this view, to give a true picture of the past, or, in other words, to make the men of one generation see past events as they were seen by their contemporaries. To historical inquirers, on the other hand, of to-day, the function of the historian seems to be primarily either what is called scientific—that is, the classification of details under principles and the reference of effects to causes—or else discovery: that is, the revealing of facts, whether small or great, hitherto unknown. On the one view, history is a branch, and, as Macaulay certainly deemed it, the noblest branch, of literature. On the other view, history, or rather historical inquiry, is, as far as may be, assimilated to, if not made a branch of, physical science. The two conceptions, be it noted, are not in reality antagonistic. The ideal historian—

if such a person should ever exist—would be at once a narrator, an analyzer, and a discoverer of the past. No one, again, will dispute—Macaulay certainly did not forget—that the basis of historical narrative must be knowledge of the past, and that the foundation of knowledge is study and investigation. Nor, may it be supposed, does the most scientific of historical investigators in reality doubt, though their practice does not always show full appreciation of this truth, that to narrate—that is, to set forth in due order and proportion the results of discovery and investigation—is no small achievement and no mean contribution to the knowledge and to the instruction of mankind. But, though this be true, it is none the less true that there is, as things now stand, practically a marked contrast or even opposition between the author who regards history as primarily narrative, and the author who regards history as primarily a branch either of science or of discovery. This difference deserves attention in itself, and certainly goes far to account for the feud between Macaulay and his critics.

Macaulay was the most effective of narrators. This, be it remarked, is a merit independent of his "style," if that word be used in a narrow sense, as meaning merely his language and mode of expression. His narrative power consisted not in a command of words, but in the capacity for grasping a large body of complicated events as a whole, and then so narrating them that every part of a complex transaction should become perfectly clear, because every fact is put in its right place. The power to do this is not given to some historians whose work is otherwise above praise. That Mr. Gardiner, for instance, might have cultivated this gift may be safely inferred from his short but admirable sketch of the Thirty Years' War; but it would be untrue to assert that he exhibits any remarkable capacity for narration in his otherwise admirable history of the Stuarts, which, especially in his later volumes, becomes more and more of an Annual Register. That Macaulay's achievement as a narrator was extraordinarily successful no one would dream of denying; the essential matter is to recognize the importance of his success. This may to a certain extent be measured by one consideration: the few volumes of his English History have made one bit of the annals of England better known to the English people than the events of their own day. True of course it is that the labor bestowed by Macaulay on narration is not balanced, as in the case of an absolutely perfect historian it would be, by the assiduous attempt to connect results with general causes. Yet to make this a serious charge against our author savors of that futile criticism which belittles one man of genius simply because he has not the special qualities of another man of equal though different genius. To complain of Macaulay because he had not the analytical subtlety of Tocqueville is hardly wiser than to attack Tocqueville's 'L'Ancien Régime' because it does not give such a picture of pre-Revolutionary France as Macaulay's History of England affords of the age of Charles II.

It may further be urged that the attempt to establish a science of history is premature. The grandiloquent generalizations of Buckle, the laws of Comte, and even the theories of Tocqueville, to many critics will seem of dubious truth. In this matter Thucydides affords us a warning. Thucydides came as near as any man could to the perfect historian; in him the capacity for historical narration is blended with and balanced by a genius for scientific analysis. He narrates, he inquires, he refers effects to causes; but though the man appeared, the hour for creating scientific history had not arrived—the attempt to do so was premature. The science of Thucydides is of less importance than his narrative. It is at least arguable that the miscellaneous information collected by the restless and unscientific curiosity of Herodotus has been of more value to the world than the historical or political theories of Thucydides.

But Macaulay, it will be said, has not discovered new facts, and the very essence of historical inquiry is discovery. It is at this point that the defenders and critics of Macaulay must in reality join issue. No doubt if it once be granted that the main function of an historian is to discover, then it will follow that Macaulay, while making every effort to ascertain the truth of the facts which he narrated, did not devote himself to what Carlyle has somewhere called "navvy-work"; but then, this admission is exactly what Macaulay and those who try to do him justice will deny. Every kind of praise is due to men whose turn of mind leads them to ascertain new facts concerning the past, even though the facts may be in themselves of no great importance; the writer, for example, who finally determines the question whether Dr. Johnson was three years or six months at Oxford; or ascertains, if it be ascertainable, who was the man who wore the iron mask; or proves conclusively that the Girondins did not, the night before their execution, partake of a good supper, has done something for the promotion of truth that is worth doing, and no sensible man ought to grudge the credit due to even the minor laborers in the field of research. But, so high is the value placed by modern critics on research which may or may not be the result of great intellectual powers, that the time has come to remind the world that the laborers who collect the materials for history are not, of necessity, themselves historians; an honest brickmaker deserves credit for the goodness of his bricks, but he has no right to claim the admiration due to an architect of genius. On the recognition of this principle is based the verdict of popular admiration which gives to Macaulay his deservedly high place among England's men of letters. To the neglect of this principle is due at least one-half of the attacks on Macaulay by men of culture and refinement who fail to perceive that, deep as is the respect due to research, the capacity for historical exposition will always be held the mark of a great historian.

OCCULT EVOLUTION.

Principles of Western Civilization. By Benjamin Kidd. The Macmillan Co. 1902.

As the Roman Republic gave place to the Empire, the vacuum caused by the disappearance of the old religion and the old habits of thought was filled with many strange and barbarous superstitions. Juvenal paints in gloomy colors the outlandish cults and mysteries which captivated the populace and startled the serious and conservative. The gravity and decorum which characterized the old republic were succeeded by wild orgies and insane excesses, and the earlier forms of worship, which, if hollow, were stately and dignified, were abandoned for bewildering rituals devoid of all rational content. Possibly some future historian will draw a parallel between that age and our own. We have seen the Salvation Army rally to its banners large masses of the English people, and successfully invade America. It has been followed by the cult known as Christian Science, which, if it have any relation to Christianity, has certainly nothing to do with science, but which numbers its churches by hundreds and its devotees by millions. Hardly less extensive, perhaps, is the modern cult of Evolution, a word which fascinates the vast horde of the half-educated, and deludes them with the notion that they can understand the past and future development of the world with as little mental effort as they need to read the daily newspaper or the latest novel.

There seems to be no iniquity which is not now condoned or defended by some sciolist as a "phase of Evolution." It makes little difference whether it be the original enslaving of the negroes or their lynching to-day; whether it be the extermination of Indians, the slaughter of Filipinos, the subjugation of Boers, the massacre of Chinese in their own land, or their exclusion from other countries—Evolution excuses everything. The categories of right and wrong have no place in this interpretation of history. Force is virtue, and success is righteousness. Men are graded as superiors and inferiors, and Evolution means that superiors may deal with inferiors as they will.

In the world of science, Evolution, of course, has an altogether different meaning; but the book before us, which is typical of its class, is not a scientific treatise. It is scientific neither in style, nor in method, nor in substance. The author has misinterpreted Quintilian's advice that the orator should create a favorable disposition towards himself among his hearers, He supposes that this result may be obtained by belittling others who have dealt with his subject, and by frequently intimating to his hearers that they are ignorant of its true meaning. No doubt the class addressed is secretly conscious of its delinquencies, and will submit to just contumely; but disparagement of rivals seldom helps those who resort to it. Nor do the showman 's arts of exaggerated laudation of the wonders of his exhibition, their unparalleled novelty, and infinite superiority to anything to be seen elsewhere, carry more conviction when the subject is the futurity of the world than when it is a mermaid or a sea-serpent.

Incredible as it seems, the author of this treatise has actually fallen back into the slough from which Darwin, with infinite labor, extricated biology. We are almost ashamed to repeat that Darwin's service consisted in exploding the hoary superstition that ideas, or types, or species were entities of the same nature as tangible and visible objects. By patient accumulation of facts, he established the profound truth that living beings have their present form, not in fulfilment of specific purposes, not in

correspondence with archetypes, but because of variations which were so related to surrounding conditions as to favor the survival of the individuals possessing them. "Natural Selection, it should never be forgotten," said Darwin, "can act solely through and for the advantage of each being." It only "takes advantage of such variations as arise and are beneficial to each creature under its complex relations of life." In testing this theory Darwin spent his life. His labors were almost superhuman, his observations wonderfully extended, his inferences careful and conscientious; and it has been supposed that he had demonstrated the truth of his conclusions.

According to Mr. Kidd, such a supposition is mistaken. Darwin was altogether wrong in maintaining that natural selection acts for the advantage of existing beings; it is future beings which it favors. There is "a principle in the evolutionary process compelling ever towards the sacrifice on a vast scale of the present and the individual in the interests of the future and the universal." Final causes dominate nature; types must be realized and perfected, evolution proceed in accordance with the speculations of Plato. For propounding doctrine of this kind in the name of science Owen was savagely punished by Huxley; but Owen at least reasoned from facts. This author is more prudent; he deals with conclusions rather than premises. His method is of that extra-logical kind known as the assertatory. The theory which he propounds "must" be true.

"The winning qualities in the evolutionary process must of necessity be those qualities by which the interests of the existing individuals have been most effectively subordinated to those of the generations yet to be born. . . . In the strenuous æons of time, during which progress followed its upward path, it must have been, on the whole, in the evolution of the qualities contributing to the interests of the vast majority in the future that the controlling meaning of the deeper life-processes always centred. It must have been in the interests of this majority that Natural Selection, in the long run, continuously discriminated. . . . Nay, we may go so far as to say that, under the law of Natural Selection, as we come to understand it in this light, the interests of the individual in those adjustments 'profitable to itself,' which filled so large a place in the minds of the early Darwinians, have actually no place, except in so far as they are included in, and have contributed to, this larger end in the future."

What Darwin proved was that a species becomes permanent when the individuals belonging to it are more vigorous or more favored by natural conditions than others. What this author asserts is that these more vigorous individuals must succumb before feebler ones in order to carry out his theory of "an inherent necessity in the evolutionary process." In the endeavor to impress his readers with the wisdom of this view, the author employs language of most oracular obscurity. Never before, he gravely tells us, has a principle of such reach as this of his emerged into view. It has brought on a "cosmic struggle"; "one of the most remarkable situations in history." It has a deep, a profound significance; it involves a gigantic problem; it is "the ultimate principle to which the history of philosophy is related"; all the phenomena of our social development must stand in subordinate relationship to it. Every few pages the reader is invited to be overcome with amazement at the stupendous discovery, and to inspect with admiring awe the revelation of the hitherto inscrutable purposes of the Creator. It must be admitted that these verbose vaticinations have not been without effect, as at least one critic falls prostrate before their author, reverentially exclaiming: "For this is the enthralling interest of his theory—that it accounts for the very moment at which we stand to-day in the process of the world's development."

Having disposed of Darwin with a few Delphic utterances, our author makes short work of Huxley. That narrow-minded and unenlightened person belongs, like Herbert Spencer, to "the pre-Darwinian period of knowledge." Spencer's conceptions are marked by "extraordinary triviality and superficiality," and Sidgwick was little more profound. As to John Mill, his theories belong "simply to the literature of a pre-scientific epoch when men possessed as yet no real insight into the character of the natural forces at work in the evolution of society." His principle implied that all sense of responsibility was divorced from the incidents and results of competition, or the struggle for gain. The ascendency of the interests of the present, with total disregard of the future of mankind, characterized Mill's philosophy. He was absolutely unconscious of the profound difference between the State and Society considered as a living organism, "undergoing, under the influence of Natural Selection, a vast process of slow development in which all the interests of the existing individuals are lost sight of in wider issues." "As the evolutionist . . . rises from the study of Mill's writings, the superficiality of the whole system of ideas represented profoundly impresses his mind."

To students of Mill's writings who are not evolutionists of this school, these statements will seem slanders too ridiculous to deserve refutation. If there ever was a philosopher profoundly interested in the future welfare of mankind, in the uplifting of those classes on whom present conditions bear hardest, it was Mill; and in his chapter on the "Stationary State," which causes our author to become quite inarticulate with superior wisdom, he points out that in that state society would contain a well-paid and affluent body of laborers, and few enormously rich men; that there would be "a much larger body of persons than at present, not only exempt from the coarser toils, but with sufficient leisure, both physical and mental, from mechanical details, to cultivate freely the graces of life."

After all, has "Western civilization" anything better than this to promise? It has, indeed, to judge from this book, extremely little to promise that is intelligible. The author is really compelled at last to offer some definite explanation of what he has called a movement of stupendous significance. But it is a parturition of ridiculous outcome. He mumbles something to the effect that Henry George's theories about confiscating the "unearned increment" must be applied, and that the industries of the people must be carried on by the officers of Government; and this is what we get from all these pages of oracular declamation. It has been cleverly said of Henry George's theory of land tenure that he defended it on the ground that every people had some time tried it and given it up; and certainly collectivism has hitherto made but a dismal showing for itself. As we contemplate this result we feel like exclaiming, in the author's words: "There rises in the mind an overmastering conviction of the extraordinary incompleteness and insufficiency of all the conceptions of the science of society we have been here considering."

As to that "majestic process of cosmic ethics" which consists in "the projection of the controlling meaning of the world process beyond the present," we are satisfied, after much study, that it amounts to that regard for the future which we call prudence and parental devotion, and that respect for the rights of our fellow-creatures which gives its name to justice. We need hardly say that many previous writers have observed the existence of these virtuous tendencies, nor contend that they have not been peculiar to Western civilization in the past and will not be in the future. It is not improbable that the class of readers to which this writer appeals perceive that they possess these virtues in some degree, and experience a pleasurable elation at being assured that they are thereby participating "in the evolutionary process which must, sooner or later, subordinate the present and all its interests to the interests of a future which is infinite." Whether they are wiser than they were before they learned this, is another question.

Roman Africa: An Outline of the Roman Occupation of North Africa. Based chiefly upon inscriptions and monumental remains in that country. By Alexander Graham, F.S.A., F.R.I.B.A. With thirty reproductions of original drawings by the author, and two maps. Longmans, Green & Co. 1902.

No country in the world, not even the interior of Asia Minor, presents so striking a contrast between past prosperity and present desolation as does that part of the North African coastland which we now call Tunisia and Eastern Algeria. Under the Carthaginians and again under the Roman Emperors, it was studded with thriving cities, and was so rich and so well cultivated as not only to support a large population, but to export vast quantities of grain to Italy. No province produced a greater number of men of letters in heathen times, of theologians and energetic ecclesiastics in Christian times. None was covered with a larger number of costly and splendid public works. Eighty years ago no region in the Mediterranean basin was so barbarous, so thinly peopled, so waste and miserable as this ancient home of culture. And even now, when France has held Algeria for some seventy years, and Tunisia for twenty, the country, although beginning to be opened up by railways and rendered perfectly safe for travellers, remains backward and in most districts very scantily inhabited. It is recovering very slowly from the results of twelve centuries of Muslim rule.

This is the region whose Roman remains Mr. Graham describes in the volume that lies before us. He entitles it a 'History of Roman Africa,' but it is really rather a series of archæological studies than a narrative history. The author seems to be an architect by profession, and has journeyed a good deal through Tunisia (his book entitled 'Travels in Tunisia' was pub-

lished in 1887). He is a good observer and an agreeable writer. But he is not strong as a Latin scholar, and not stronger as an historian. There are many small historical errors scattered through the book, and expressions are used which betray an insufficient knowledge of Roman history. No one, for instance, who had mastered that history would write such a sentence as this (p. 25): "The establishment of the principles of monarchy, dating from the time when Cæsar and Pompey acted in unison to overthrow the aristocratic constitution of Rome, became permanent after Cæsar's decisive victory at Thapsus." No trained historian would, in speaking of Carthage, fail to refer to Aristotle's remarks on its Constitution, would omit an account of the Donatist schism (the Donatist quarrels are barely referred to), would say scarcely a word about the Vandal conquest of Africa, and give only a few lines to its reconquest by Belisarius. The book is, in fact—and this is why it is necessary to make these criticisms—not a history of Roman Africa, but an account of the inscriptions and monuments which commemorate the Roman Emperors who reigned over North Africa from Augustus to Honorius. As such it has its value. The inscriptions have been well selected from the very large number discovered and transcribed in recent years, especially by the diligence of French scholars. The drawings not only are carefully executed, but show the skill and knowledge of the trained architect.

The arrangement of the book is chronological, not topographical. Each city in which Roman remains have been found is taken in the order of the succession of the Emperors to which its inscriptions relate, or in whose time its chief surviving monuments were erected. Thus, Theveste (now Tebessa), an inland city to the west of Kêrwan, is taken in connection with the Emperor Vespasian, because its earliest inscriptions date from his time, although it became far more prosperous and important at the end of the second century A. D. Its neighbor Thamugas (now Timegad) is noticed under the reign of Trajan, because that Emperor caused a city to be erected there, where previously only a fortified frontier post had existed. Thysdrus (now El Djem), famous for its magnificent amphitheatre, is described under the reign of Gordian III., as Lambæsis, the great frontier camp city, had been under that of Marcus Aurelius. Though there are some conveniences in this plan, we think that, on the whole, a topographical arrangement would have answered just as well, for the inscriptions and ruins do not come sufficiently into the general annals of the time to make it necessary to place a description of them at the point where they first emerge into the broad daylight of history.

The accounts given of the ruins which our author deals with are full of interest, and throw a great deal of light on the conditions of what was doubtless one of the most populous and prosperous of all the western provinces of the empire. The four cities we have named above, Theveste, Thamugas, Lambæsis, and Thysdrus, besides other once flourishing towns, such as Sufes and Sufetula, all lie in a strip of country about 250 miles long, from Thysdrus on the east to Lambæsis on the west. They are far in the interior to the south and southwest of Tunis. All this region is now almost desolate; that is to say, though poor villages are scattered here and there through it, it is nearly all uncultivated, and inhabited chiefly by nomadic or semi-nomadic tribes little removed from barbarism. It must have been, however, as the existing remains show, both well cultivated and well peopled; much of its wealth, at least in the eastern part, consisting in the wide-stretching plantations of olives, from which vast quantities of oil were exported to Europe. The best witness to its wealth is to be found in the amphitheatre of Thysdrus, a structure about as large as the amphitheatres of Verona, and somewhat larger than those of Pola and Arles. It is inferior only to the great Flavian amphitheatre at Rome, which we call the Coliseum. It is one of the most superb Roman works in existence. It covers four and a half acres of ground, and could seat more than thirty thousand persons. Mr. Graham thinks that it was built by Gordian the Third, in honor of his grandfather Gordian I., who was a native of the place, and doubts whether it was ever completed. But, completed or not, it must have been meant to serve a very large population. To-day, Thysdrus is represented by a wretched group of hovels called El Djem, and there are not 10,000 people within a radius of twenty miles from this majestic ruin, which was used as a fortress against the Arab invaders under Sidi Okba in the seventh century A. D., and had one-fourth its circumference destroyed by cannon used against rebel tribes, who had taken shelter in it in 1697.

Mr. Graham's account of the ruined cities does not purport to be exhaustive. He says little about the mosaic pavements, a species of decoration in which North Africa is peculiarly rich. He tells us less than we should expect about Carthage, where, to be sure, the ruins are scanty, and barely mentions the interesting Roman remains at Uthena (now Oudena), fifteen miles south of Tunis. He confines himself almost entirely to Tunisia and eastern Algeria. But of the principal ruins in that very interesting region, the most civilized part of Roman Africa, he gives an account sufficient to enable his readers to realize the part it played in the ancient world. And he dwells with proper fulness and emphasis upon the reigns of Trajan, Hadrian, Marcus Aurelius, and Septimius Severus (this last Emperor himself an African) as brilliant epochs in North African history. Perusing his pages, one wonders when and by what race prosperity will be restored to these naturally rich regions. At present there is hardly any colonization, for the French, though they have secured order, made railroads, and done much in the way of archæological research, have not yet tempted settlers from any of the industrious races of southern Europe, nor induced the half-civilized natives to reclaim the long-abandoned fields, or to restore to any considerable extent the ruined irrigation works on which cultivation so largely depended in Carthaginian and Roman days.

Old Diaries: 1881-1901. By Lord Ronald Gower. Charles Scribner's Sons. 1902.

Horace Walpole's letters, especially those addressed to Mann, were really diaries, and one is sometimes reminded of Walpole in reading these diaries of Lord Gower. Lest we mislead the reader, it should be said at once that the resemblance is due to certain qualities which are usually classed as defects, and that Lord Gower's diaries are vastly inferior in every respect to those of Walpole. The frontispiece shows him to be possessed of an aristocratic but effeminate face, and there is a lack of virility in his views of life which is even more striking than in those of his celebrated predecessor. He shares Walpole's fondness for the nobility, and takes too obvious a pride in his connection with ducal families and in his possession of thirty-two quarterings. But here the resemblance ends. It is true that both writers deal with persons rather than things, but Walpole took a keen interest in political matters, and constantly referred to the events of the day and their effects on men's minds. Lord Gower, on the other hand, confines himself to records of travel, of the hotels he lived in, and of the people he met. He has nothing to say of politics, nothing about questions of finance or sport, nothing about social problems or many other things that interest most men. It is true, he takes a dilettante interest in art, and his skill in sculpture may be seen in the Shakspere monument at Stratford; but an invitation to dinner with the Queen at Windsor or with the Dowager Empress of Germany at Homburg was the source of his greatest happiness and his most genuine inspiration. His style is exceedingly slipshod. He writes of "Count Stolberg *whom* Herbert Bismarck told me is the owner," etc., and of "John Symonds *whom* I had heard was ill," etc. He constantly refers to houses as *livable*, and confuses *exceptionable* and *exceptional*. He has lived much in France and Italy, yet his quotations in French and Italian are generally incorrect. It may be that a gentleman with thirty-two quarterings is apt to become reckless in matters of style, but to the ordinary reader such blunders are annoying.

Having pointed out the inherent weaknesses of the book, it is only fair to show by a few extracts that it is not devoid of interest. Many readers will agree with Gray's words, "I love the people that leave some traces of their journey behind them"; and, though it does not fall to the lot of every diarist to provide material for the historian as Walpole and Arthur Young did, nevertheless such chronicles can scarcely fail to be of some value.

In 1884 Lord Gower was in Boston and called on Oliver Wendell Holmes, who told him that "Americans had not cared for Carlyle's denunciation of the North in the civil war more than one does for a dog that yelps after a carriage." In 1885 he met Dr. Schliemann, who said that he had not had time these last eighteen years to keep himself *au courant* of anything but Homer and Troy. Here is a description of Nile scenery:

"I was up early, and saw the moon, still brilliant, giving way majestically to the rising sun. In front of my cabin rose a noble row of palms, the river flowing by in front; these trees stood out red against the rising sun, which paled the moonlit sky. On the right a lantern on our dahabeah threw out a bright track of light across the water; thus there were three lights all combined—a difficult subject for a painter to attempt."

And here is an account of Renan:

"He is one of the uncouthest and uncanniest-looking of mortals—all head and

belly, no legs to speak of—a general look of a half-frog, half-human being. He is most amiable and courteous in manner, but he has a tiresome way of apparently agreeing with whatever is said."

Lord Gower once asked Millais whether he should call him "Sir John" or, as Lady Millais did, "Sir Everett." He answered: "Well, you see, my dear fellow, my wife married John Ruskin before she did me, and that makes her dislike the name of John." Gladstone, in speaking to Lord Gower about different royalties, said that all the Georges except George III. were scoundrels, and that no royalty he had ever met had such charm and tact as the then Prince of Wales. On another occasion Gladstone referred to meeting Macaulay in Rome in 1837. Macaulay spoke of taking a daily walk in St. Peter's, and on Gladstone asking him what most attracted him in that place, he replied, "The temperature." Lord Gower wrote to the Duke of Norfolk for some information about the Tower of London, and the Duke replied: "It is a subject in connection with which our family have often lost their heads so completely that you can hardly expect me to give any very clear information."

In his preface, Lord Gower claims that nothing in his book will be found to be "set down in malice," and this claim seems to be justified.

Mary Boyle, Her Book. Edited by Sir Courtenay Boyle. E. P. Dutton & Co. 1902.

The death, in 1890, of Mary Boyle, one of the famous Boyles of the family of the Earls of Cork and Orrery, threw half of London society into slight mourning, and caused a faint ripple on the surface of London literary life. "Few have paid more visits to the country houses of the upper classes," said a writer in the *Academy*, with more accuracy than good taste. Mr. Theodore Watts-Dunton, on the other hand, who wrote her obituary notice in the *Athenæum*, dwelt on Miss Boyle's friendships with literary men, and assumed that these intimacies, rather than her own achievements in literature, or her social position, had made her "almost prominent." It is the fate of certain persons who possess great social charm and sympathetic manners to be appreciated solely for themselves during life, and after death to shine, if they shine at all, by a reflected light. If Mary Boyle had not written a spasmodic journal in a naïve and entertaining style, she would now be buried fathoms deep in the indices of the biographies of her brilliant friends. She was the familiar friend of Dickens; but who would gather the fact from the two slight references to "Miss B." in the index of Forster's 'Life'? Landor admired her, and said of her, with more enthusiasm than judgment, "Mary is more than clever; she is profound"; but one does not think of Mary Boyle as one of Landor's set. Tennyson, whose son married her niece, addressed a poem to her in 1888, which is printed in the introduction to the present volume. The last stanza contained a prophecy soon to be fulfilled for both:

"The silver year should cease to mourn and sigh—
Not long to wait—
So close are we, dear Mary, you and I,
To that dim gate."

We do not remember that this poem, entitled "Spring Flowers," is mentioned in Lord Tennyson's 'Life,' where but slight notice is taken of Mary Boyle. She was a frequent and welcome visitor at Casa Guidi, and was intimate with the Carlyles. In fact, there were few English literary men of distinction with whom, in the course of her long life of eighty years, she was not on more or less friendly terms. Charles Lever knew her in Italy, and of him she tells a story that should have pleased Mr. Bret Harte:

"On the table lay a volume of Bret Harte's parodies of popular novelists, and I, volunteering to read a passage aloud, asked if he could recognize the authorship. It was the narrative of a cavalry officer who, in the heat of an engagement, took a flying but unwilling leap over a horseman in a dark cloak, cocked hat, and white feathers. As far as I can remember the words —'My horse cleared the obstacle well; I lifted my eyes, and found myself for the first time in the presence of Field-Marshal the Duke of Wellington!' Never shall I forget Lever's burst of laughter, which seemed to flood the whole room with sunshine. 'Upon me soul, I believe it's meself; it's uncommonly like me.'" (P. 214.)

Mr. Watts-Dunton speaks of Miss Boyle's charm as indescribable and perhaps unique. Witty all allowed her to be; we quote from the introduction an instance of a ready repartee:

"It was at Ashbridge that, some years before the present Bishop of Ely [Lord Alwynne Compton] put on lawn, there flashed forth one of those keen answers with which she often delighted her hearers. They were discussing some important point of High Church—Low Church—Moderate Church. As luncheon was announced, a prudent critic of the discussion said: 'Well, after all, it is very true that *via media securum iter*.' 'You don't know what that means, Mary?' 'Oh, yes, I do! That is what Lord Alwynne says: "Caution is the way to secure a mitre."'"

Mary Boyle's fame was not strong enough for exportation; so delicate a vintage was for home consumption, and probably few people in America are familiar with her name. Her journal is worth reading for the pleasant if superficial impression of many interesting people, men of affairs, actors, poets, and novelists. The Boyle family is connected with the best blood in England, and in the country houses which she calls her "extra homes" Mary Boyle spent much of her time. Thus we get glimpses of life at "Burghley House by Stamford Town," Bowood, and Longleat. Her poetical drama, "The Bridal of Melcha"; her poem, "My Father's at the Helm" (once greatly in vogue); her novels, written under the influence of Scott and G. P. R. James; her art criticism, have not survived to the present day. She lays little stress on that side of her activities, and is singularly free from the vanity of minor writers.

The volume is attractively got up, and has some pleasing illustrations.

Nathan Hale, 1776: Biography and Memorials. By Henry Phelps Johnston. New York: Privately printed. 1902.

Nathan Hale was hung as a self-confessed spy, when in his twenty-second year. In his short life few incidents above the ordinary are to be found, and the materials bearing upon his early years are naturally slight and much disjointed. He was of good New England stock, and his training was of the usual quality of his time. His entrance into Yale College, his service as a teacher until the Revolution called him into the field, and his ready response to the call of patriotism—such are the known incidents of his life. A shadowy romance is traced, and his friendships aid us to form some idea of his thoughts and ambitions. Yet a youth who had passed his life in a quiet Connecticut town in colonial times must have been immature, and whatever expansion of character came to him was due to a sound training and his experience in camp. In the latter place he met men from other colonies, and notably from the southward, whose habits were very different from his own. The school-teacher, with half-formed ideals, developed rapidly until he was ripe for martyrdom; and when the final test came, he is found fully equipped for meeting it with a simple dignity that proved his worth.

Professor Johnston has made the most of his material, and has carefully garnered every reference to Hale or the regiment in which he served. Step by step his movements are traced from the camp near Boston to New York, in the spring of 1776, and the most trivial facts have been skilfully used to round out the story. Naturally, where so little of Hale's own writing remains, great dependence is had on the scattered chance references to him and on the general conditions of army and people at this time. The background of the picture is so carefully filled in as sometimes to detract from the prominence intended for the young hero. With the military operations of the campaign of 1776 Mr. Johnston is familiar, having made a special study of them. He will not admit that Washington made a tactical blunder in placing so large a force on Long Island, where escape was difficult and the chances of defeat almost certain. He believes, however, that the result was a "disaster," and that is only the truth, as the day cost Washington upwards of eleven hundred men. In the battle Hale had no part, but it was because of the defeat and uncertainties following it that Hale found his mission and death. What connection Washington had with his journey into the British camp is uncertain, and it is hardly possible that it was immediate. The details of the "secret service" were held by others, and not even to the members of Washington's own military family were the names of the agents known. Further, the machinery of this intelligence system could hardly have been perfected at the time of Hale's venture. The position of Tory and Whig in New York was not determined, and the subsequent long years of internecine strife in Westchester County and New Jersey proved how evenly balanced the two factions remained. A suggestion from headquarters and a performance by Knowlton would be sufficient, and we cannot but think that Mr. Johnston errs in seeking to give Washington a prominent share in the undertaking of Hale's journey. Heath and Clinton seem to have been in charge of the spies.

The known facts of Hale's life are so few that the imagination is drawn upon for material. Exploits, such as the capture of a provision sloop under the *Asia's* guns, are assigned to him, with just sufficient probability to make it difficult to disprove them. Calmness and judgment in time of danger are assumed to belong to him, and, in the light of the final tragedy, rare qualities of temper and operations of mind are

conferred upon him. He is made to look upon what is passing around him not in a natural and even casual way, but with the intensity of an impending disaster. The story is told sympathetically, and with a detail that proves the industry of the writer. The entries from the British orderly-books and from the logs of the British vessels near New York enable Mr. Johnston to correct the current story of Hale's capture, and this may be considered the most important contribution made to history by the present volume. Hale's diary while in service is given in full, and the many admirable illustrations and the beauty of print make the volume a worthy tribute to the memory of the man.

Robespierre: A Study. By Hilaire Belloc, B.A. Charles Scribner's Sons. 1901.

Beside Mr. Belloc's volume on Danton may now be placed a study of Robespierre which is conceived in much the same spirit and executed in much the same style. The spirit is that of reverence for the Revolution; the style is that of one who is endeavoring to reconcile poetry with prose, and the demands of historical accuracy with an aspiration to interpret the hidden truths of character and motive. Here are deep problems, or rather they would seem such did not Mr. Belloc attack them so lightheartedly. Whatever the shortcomings of this book may be deemed to be by those who admire the National Convention less than Mr. Belloc does, it is instinct with energy. However closely it may seem to identify original power with the love of strange words and unusual phrases, we cannot truly say that the author, in his search for picturesqueness, has merely discovered mannerisms. Striking language will be found in every chapter and on every page. Whether or not it gives pleasure must depend largely upon individual taste. Those who like a copious and fervid diction may be greatly impressed—those who do not may be inclined to close the book at the end of the preface. For ourselves, we have found that Mr. Belloc's strain, as it rushes on from paragraph to paragraph at a sustained pitch of declamation, is somewhat exhausting, but we would not deny him for a moment the merits of good scholarship, ingenuity, and rhetorical skill. Though good taste may be at times overshadowed by assertiveness, this volume pays homage to an idea which now if ever we need to emphasize—the idea, namely, that if historical research is a science, historical composition is an art.

For the average man the name of Robespierre connotes the Terror, and particularly the Great Terror. But here Mr. Belloc intervenes to distinguish between creating and using. "It is a grave historical error to confuse Robespierre with the Terror—indeed, it is an error no longer committed save by historians whose ignorance of the French language and of recent research preserves them in a traditional net." In our opinion the test point is Robespierre's responsibility for the law of 22 Prairial, An II., which "deprived the accused of defenders, dispensed with witnesses, and substituted moral for material proofs [Aulard]." Concerning the fact of his connection with this measure there can be no dispute. He drafted it himself, although Couthon was the agent who presented it. What happened during those ghastly forty-nine days, when 1,376 victims were hurried to the guillotine, is, in one sense, but too well known; yet as to Robespierre's direct part in the carnage some misapprehension still exists. During the last weeks of his life he seldom attended the meetings of the Committee, and no list save that of 2 Thermidor bears his name. Mr. Belloc's hypothesis is, that in the early summer of 1794 he wished to stop the Terror and come forward as the saviour of France. In support of this view, which he admits is not capable of definite proof, the author appeals to some words of Barère: "Robespierre perished because he would have stopped the great career of the Revolution." It seems a risk to lay much stress upon one of Barère's phrases, but Mr. Belloc's point is that the Committee, before waiting to be destroyed, anticipated Robespierre and used the power which was given it in a way he did not approve. Where he had thought himself the master, he found Carnot, Barère, and Prieur, with different aims and considerable determination, in control of the machine. He quarrelled with them and he fell.

Mr. Belloc bases his book chiefly upon the material which was collected by Ernest Hamel, but he does not go nearly so far as Hamel did in vindication of Robespierre. We quote one passage which shows this, and which also shows Mr. Belloc's style when it is not quite at its best:

"The hopeless oneness of structure that is for living things a negation of life, the single outlook and exiguous homogeneity of his mind, made him in the first troubling hopes of the Revolution a shaft or guide, in its dangers and betrayals, an anchor, in its high last and vain attempt to outstrip our human boundaries, a symbol, and in its ebb of return to common living a tedium and a menace. For when men of human complexity reposed at last in victory, and had leisure to balance things again, he was seen to have neither instructive human foreknowledge nor the sad human laughter, and there was no exile in his eyes."

It would be a capital omission in giving an account of this book to neglect Mr. Belloc's personality. Where the writer keeps himself in the background, the reviewer has no excuse for dragging him upon the stage, but where, as in the present case, a large number of confidences are frankly offered, there can be no reason why one should not take notice of the fact. In a word, Mr. Belloc shows signs of possessing a certain quality which he shares with Cicero, Rousseau, and Charles Sumner. He is neither reticent about expressing his own sentiments nor weakened by any distrust in the value of his own judgments. Thus, a good deal of his eloquence suggests the college debating society, while the marks of youthfulness may be seen from the first sentence, in which he sits "alone at evening before a fire of logs in a room near the Rue St. Honoré," to the last in which he refers to himself as one who hopes for better things. Were Mr. Belloc devoid of talent, it would not be worth while to notice a fault of manner which threatens to become serious. We only criticise this aspect of the book because we have a sincere belief that, if the author is willing to use a little more repression, he can write considerably better than he has done as yet. Of course, every man must develop his own style, and no one should demand that individuality be unduly checked; but, in this instance, the danger does not lie on the side of self-effacement.

This is not an ordinary biography, but an interpretation of character, which, as respects the treatment of literature and history, follows canons of its own. If in some ways it is marred by affectation, it cannot be termed commonplace, and from time to time it reaches the pitch of eloquence which it so constantly strives to attain.

The Georgian Period: Being Measured Drawings of Colonial Work. By Frank E. Wallis, C. Bertram French, E. P. Morrill, E. Eldon Deane, Theo. H. Skinner, C. M. Bill, and others. Part IX. American Architect & Building News Co. 1902.

In repeated notices in these columns the great excellence of this collection has been pointed out. Sometimes the number is devoted to large plates, mainly copies of line drawings; sometimes it is rather to photographs of the existing house or church that its space is given up; sometimes there is a sheet or two of text with inserted illustrations. The number before us partakes of all of these characteristics. Mr. Paul Waterhouse, an English architect, contributes an article, which is illustrated with photographs by W. Galsworthy Davie—a well-known compiler of important architectural books. The title of it is "The Relation of Georgian Architecture to Carpentry"; and the half-tone prints, nineteen in number, of European origin, though some of the American examples invade the English writer's text, is followed by what appears to be an editorial note on Seventeenth Century Houses, and that by an article on Dutch and German eighteenth-century work, all apparently in America. There is also an article by Theodore H. Skinner on the University of Virginia, and one by James Eastus Price on the Cape Fear district of North Carolina. The illustrations in these papers are partly half-tone prints and partly reproductions of drawings. After we have turned over the five sheets of printed matter (folio size, let it be remembered), we come to the plates, these again partly pictorial views taken by the camera from nature, but in this instance much more frequently reproductions of line drawings made with the T-square and triangle in the orthodox architectural way. Those rigidly drawn details are pretty sure to be accurate—at least it is a point of honor among persons who make *relevés* of this kind to give the exact curve and the right number of flutes or of billets, and so these drawings at least do not belie the character of the original. So much is not to be said of the drawing of the very interesting front door and steps of the Cowles house at Farmington, for here that which is in reality a smooth and smug piece of neoclassic work, with well-levelled and well-pointed brickwork and glossy, white-painted wooden door, columns, entablature, festoons, and fanlight—all as neat as the tool could make it—is turned by the draughtsman's art into something very picturesque indeed, like a fourteenth-century front door in Normandy. Nothing but praise, however, can be given to the drawing of the church tower in Plate 19. There, in despite of the temptations to a false picturesqueness, the hard, square-edged, boxy look of the original tower is preserved, and there can be no higher praise than that when we

are considering, not landscape art, but the facts of existing architecture.

A small prospectus laid within the cover states that there will be only three parts more of the work. The price of publication is not clearly given in this prospectus; but that is indifferent, as information can be obtained by writing to the American Architect & Building News Co.

What Is Christianity? Lectures delivered in the University of Berlin during the Winter Term, 1899-1900, by Adolf Harnack. Translated into English by Thomas Bailey Saunders. G. P. Putnam's Sons. 1901.

In his preface to the English edition of this important work, Professor Harnack says that theologians "only half discharge their duties if they think it enough to treat of the gospel in the recondite language of learning, and bury it in scholarly folios." But not all who can use the recondite language can, at the same time, express themselves in such a simple and straightforward manner as does Professor Harnack in these lectures. Many who have followed him through the laborious dulness of his 'History of Dogma,' will wonder at the ease and freshness of his present form. They will wonder more when they read in Mr. Saunders's preface that these lectures were delivered extemporaneously. An enthusiastic hearer took them down in shorthand and presented Professor Harnack with a complete report of what he had said. A few corrections were sufficient to bring the lectures into their present shape. Harnack is not a prophet without honor in his own country. It gives some idea of his vogue that these lectures were attended by 600 students from all departments of the Berlin University.

Perhaps their most interesting aspect is the comment they afford on the pious flurry which, not long ago, was occasioned by Professor Harnack's critical estimate of the chronology of the New Testament books. The more conservative hailed that estimate as reactionary to a remarkable degree, and those who knew least of the details of the criticism were most vociferous in their delight that the learned professor had become as one of them. In fact, the criticism was reactionary only as related to such an extreme throwing forward of New Testament dates as that of F. C. Baur; it remained farther from the traditional standpoints than the radical criticism of Renan, notably with reference to the Fourth Gospel, which Professor Harnack cannot assign to the Apostle John. But what was most significant in the jubilation over Professor Harnack's "reaction" was the inference from his earlier dates that everything in the New Testament must be taken at its face value, with the effect of a complete endorsement of the traditional theology. To read these lectures is to become aware how far any one entertaining such ideas reckoned without his host. For Professor Harnack the New Testament literature is a distorted shadow of things actually said and done—not an exact report of them—while his construction of the nature and character of Jesus is far less conservative than the older Unitarianism in America, or than the English type even.

While Prof. Harnack is commonly regarded as an eminent representative of the Ritschlian school, there is little here to identify him with it beyond his frank distaste for an elaborate Christology. To the doctrine of Christ's double nature he has a particular aversion. After a preliminary chapter, the next following discusses the sources of information and certain prominent aspects of the history. We read of the Fourth Gospel that it "does not emanate or profess to emanate from the Apostle John," and, though "not altogether devoid of a real, if scarcely recognizable traditional element, it can hardly make any claim to be an authority for Jesus's history." Strauss's mythical theory is rejected in set terms, while at the same time immense concessions are made to it. All the birth-stories are frankly brushed aside, and the accounts of miracles are reduced to "the sifted sediment of a residuum." Cures may have been effected by the spiritual force of Jesus, but nearly all the miracle stories arose from misconceptions of one kind or another. Of the traditional evidential miracle—a violation of natural law—no shred is suffered to remain. At the same time, it is contended that the Synoptic Gospels give us a clear account of Jesus's teachings, of "his life's issue in his vocation," and of the impression which he made on his disciples and which they transmitted. Good reasons are given for denying to Jesus any sympathetic relations with the Essenes. Those for the absence of any Greek influence are less satisfactory, and seem to suffer something like contravention from Professor Harnack himself.

The message of Jesus is declared to be one of great simplicity—that the kingdom of God was coming; the infinite value of the human soul; the higher righteousness. and the commandment of love. It is conceded that, over against the kingdom of God, Jesus saw a kingdom of the devil, sharing this idea with his contemporaries. There is something very naïve and pathetic in Professor Harnack's plea for a kindly judgment of this mistaken view. He is quite sure that our modern opinions have their husk as well as kernel, and that we too shall require kindly judgment of our posterity. Surely this is about as far from the identification of Jesus with the infinite God as a genial scholarship can go.

In a succession of interesting chapters we have the teachings of Jesus considered in their relations to asceticism; to the social question, especially as affecting the poor; to questions of law and order; to civilization in general; to Christology; and to matters of doctrine and creed. In several of these chapters, were Tolstoy never mentioned, we should know that Professor Harnack had him vividly in mind. But he refers to him frequently, and it is mainly against him that he endeavors to free Jesus from the implications of asceticism, a drastic view of property, and opposition to all legal requirements and the use of force. Clearly upon this ground Professor Harnack does not fight as one who beats the air. Among his six hundred students, doubtless there were many Tolstoïans, socialists, anarchists. One cannot but admire the deftness of his exegesis, while unable to agree with him that the teachings of Jesus are perfectly evident. Where it requires so delicate an instrument as Professor Harnack's exegesis to separate Christ's apparent teachings from the real, it is not strange that so many have gone quite astray. The general contention is that Christ's concern was entirely with the individual, and that we have no right to go to him for answers to specific social questions or for particular political programmes.

Coming to Christological matters, the simple humanity of Jesus is set forth in terms of unmistakable lucidity: "This feeling, praying, working, struggling, and suffering individual is a man who, in the face of his God, associates himself with other men." "The gospel as Jesus proclaimed it has to do with the Father only, and not with the Son." There is a lack of clearness at one point: we are told that Jesus did not claim to be the Son of God, and elsewhere we are told in what sense he made this claim (pp. 138, 156). The view of his Messiahship is opposed to Wellhausen's, which Martineau adopted, viz., that Jesus did not think of himself as the Messiah. Professor Harnack's view appears to us much more credible than the view to which it is opposed. Of the teaching that to appropriate the gospel a man "must learn to think rightly about Christ," he says, "That is putting the cart before the horse."

The most central interest of a chapter on the Apostolic Age pertains to the resurrection of Jesus. We are assured that faith in immortality is independent of "a foundation unstable and always exposed to fresh doubts." We cannot be so much as certain that Paul knew the story of the empty grave. Paul has a chapter to himself. It denies with equal confidence that Paul founded Christianity and that he corrupted it. He continued it in the spirit of its founder; but his metaphysical treatment of Jesus was the source of many ills. Of these we hear much in the chapters on Greek and Roman Christianity. Especially in the former, Professor Harnack's foot is on his native heath, he has so carefully, in his 'History of Dogma,' elaborated the development of the Catholic Church through its struggle with Gnosticism. The part played by theological fictions in this development is not concealed, nor does Professor Harnack refrain from the damnable heresy that the chief of these was the identification of the Logos with Jesus with which the Fourth Gospel sets out. The indictment of Greek and Roman Christianity is very stern. Both are pronounced foreign to the gospel, which they only accidentally preserve. It is conceivable that a Greek or Roman Christian would have written these chapters differently; the one on Protestantism, also—though Professor Harnack puts his finger, there, on many ailing spots.

Chine Ancienne et Nouvelle. Par G. Weulersse. Paris: Armand Colin.

The author of this lively work, who has a good French style, enjoys a travelling fellowship of the University of Paris. He gives here his reflections and impressions of the oldest nation, that may yet be the youngest in the list of the world's surprises. At Hong Kong he was struck with the extreme originality of a modern city which includes two great civilizations, Oriental and Occidental, and was mightily impressed with the grandeur of England in the East—her unnumbered ships and the wonders

which she has accomplished in sixty years. At Kowlun he noted the enormous number of "go-downs"—those stone storehouses so characteristic in countries where fire makes such ravages. He gives a long description of Canton, takes us to Shanghai and Wu-sung; and with his own keen eyes we seem to see everything, new and old. In the Yangtse valley at Hankow and Nanking he is deeply impressed with the immense commercial future for this river region, which excels all others in China. He was unable to get to Tientsin or Peking, on account of the Boxer uprising and the Boxer-like attack of the "Christian nations" on the Taku forts.

All his descriptions are bright and informing. By far the most interesting to readers of the present day are the studies (in Part ii.) which he has made of the economic situation. He faces the supposed Chinese peril by acknowledging the great natural resources and the industry of the people, but points out the defects as well as the qualities of the Chinese workman. The inferiority of the production in China as compared to the richness of the natural resources seems to him almost incredible, despite the evidence immediately before him. While the political administration remains hopelessly corrupt, there is little danger to the West from the menace of an economical invasion. The phantom of the yellow peril will be nothing but a phantom so long as the Chinese people are in the grip of the mandarins. Nevertheless, the steady invasion of Western ideas in China is destroying the power of the literati, and none know it better than these devotees of a hoary system. Discussing education and the teaching of the missionaries, especially of the Jesuits, whose colleges he visited, M. Weulersse notes also the modern official Chinese curriculum, especially at the College of Nan-yang, which was established in 1898, during the hundred days' reform. In the English or American schools the English language is taught from infancy, so that correct pronunciation and idioms are mastered. There is a French school at Shanghai, and it remains for the French to develop it for the profit of France and China.

With unsparing frankness the author, in examining the commercial situation, shows why the exports from France are so much less than from other countries. The articles are too dear, the exporter too timid, and the means of transportation inferior. At home the Frenchmen imagine that because what they get from China is luxuries, the Chinese must therefore be rich; whereas, taken altogether, they are very poor. The Americans and Germans know the reality, and understand the Chinese and their customs better. The only line of French steamers is the Messageries Maritimes, and these are in a state of decay. On the Yangtse River alone, while the English have several great lines, the Japanese one, and the Germans two, the French have none. Our author pleads for more energy and intelligence in his countrymen, if commercial success is to be won. Amid the preponderance of English, Japanese, and Russians, French influence is wofully lacking because of a certain want of cohesion among the French themselves. They are not vividly interested. They do not seek to penetrate the problem of country or people, but exercise a sort of "moral absenteeism." France in China is deprived of the organs necessary to action and resistance. A college for French youth, a business college for commercial apprentices, and a strong French newspaper are crying needs. In the chapter on diplomacy, it is shown that the diplomatic servants of France are badly paid. In the eyes of the Chinese the French have "lost face," and count no more as a naval power. In spite of all criticism, France need not despair of commercial expansion in this, one of the finest fields. M. Weulersse would have the unproductive north of China left alone. Concentration of influence and commerce should be made in the region of the Yangtse valley. With a French colony in Indo-China, and a base of operations, there should be for the French permanent interest and rights in China.

Treating of the moral interests of the Chinese Empire, M. Weulersse pays a high tribute to the Jesuits, who have organized the meteorological service of China, while the most recent studies of the hydrology of the Yangtse are by them. Yet he doubts their success spiritually. His analysis of the causes of the Boxer uprising shows subtle discrimination of the strength and weakness, both of the Catholics and the Protestants; the former with their immovable doctrines, and the latter with their more supple teachings. Yet he declares that the onset was against foreigners rather than Christians. The deepest cause of chronic disturbance is the interpenetration of Western civilization in every form with Orientalism; in a word, the eternal conflict between the Orient and the Occident. Incidentally, he shows how the preoccupation of a great Power like England with a handful of farmers in South Africa gave the Boxers their immediate encouragement to strike.

Altogether this is a bright and timely book.

The Memoirs of François René, Vicomte de Chateaubriand. Translated by Alexander Texeira de Mattos. G. P. Putnam's Sons. 1902.

This translation of the famous 'Mémoires d'Outre-Tombe' could hardly have found a more favorable moment for its appearance. During the last few years, French critics of royalist or ultramontane leanings (notably M. Brunetière, among the latter) have attempted, with some success, a sort of Chateaubriand revival. To the majority of English readers his name suggests rather tales of the last of Moorish chivalry or the idealized redskin than the series of early nineteenth-century scenes and portraits of which, in French literature, the only rivals are to be found in the pages of Saint-Simon. It is possibly the sense of the difficulties involved in the rendering of a highly individual style that has hitherto kept off the incompetent, thus leaving to Mr. Texeira de Mattos the opportunity for an English version which, in spite of the translator's uncompromisingly foreign name, is almost entirely free from blemish. We have not for many years come across a translation of any important work from French into English showing an equally delicate grasp of word-equivalences joined with the comprehension of the idiomatic demands of the language into which the work is to be rendered.

In proof of this, the reader may safely turn to such memorable passages as the account of Chateaubriand's boyish reveries (i., 85), the author's wanderings among the North American Indians (i., 217), the love episode at Beccles (ii., 86), or the execution of the Duc d'Enghien (ii., 256). Gallicized sentences, such as the following, are rare: "Whether it be that the language has made progress, or that it has gone backward, or that we have advanced in civilization or retreated towards barbarism, it is certain that I find something threadbare, antiquated, grizzled, cold, and lifeless in the authors who were the delight of my youth" (i., 133). We have consequently no hesitation in pointing out a few manifest slips. Madame de Caud (ii., 314) writes to her friend: "Les Blossac m'ont confié dans le plus grand secret une *romance* de toi." The italicized word is not commonly translated as novels (ii., 314). Again, we cannot recognize *precipitously* (iv., 161) as a suitable equivalent for "Les portes des loges s'ouvrirent *précipitamment*."

The four handsome volumes already issued are sufficient to stimulate our looking forward to the forthcoming two which are to complete the series. It is the fascinating record of a life varied beyond the lot of most men, and, in spite of its many errors and its all-devouring egotism, animated by a loftiness of ideal principle which remains associated with the memory of the best of the old *noblesse*.

The Sectional Struggle: An Account of the Troubles between the North and the South, from the earliest times to the close of the Civil War. First Period, ending with the Compromise of 1833. Part concerning the early Tariffs and Nullification. By Cicero W. Harris. Philadelphia: Lippincott. 1902. Pp. 343.

Mr. Harris's volume seems to be a fragment of a considerably larger work whose publication in full is, for reasons somewhat obscurely hinted at in the preface, temporarily delayed. The plan apparently contemplates an elaborate history of the United States in all the relations in which the sectional issue between the North and the South has been in any way raised. The present instalment, whose scope is in part indicated by its title, is a minutely detailed study of the debates in Congress on the subject of the early tariffs and nullification; indeed, the matter consists almost wholly of virtual abstracts of the "Annals of Congress" and "Register of Debates" for the period covered. As such, the book has value, but it offers the material for history rather than history itself, and is hardly interesting reading. Even as historical material, too, Mr. Harris's work is incomplete. The important subject of the course of public opinion in the States regarding the tariff is hardly more than referred to, while the effects of tariff legislation on the opinions of members of Congress is inadequately pointed out. As to the growth of nullification sentiment in South Carolina, Mr. Harris adds little, save in the field of Congressional discussion, to what was known before, or which Professor Houston has not more clearly set forth in his 'Critical Study.'

In other words, 'The Sectional Struggle,'

though showing great industry and evincing a good temper, is, so far as the present instalment goes, uncritical and of limited usefulness. It lacks a discriminating summing up of results and an explanation of the bearing of debate on political action. It is to be hoped that Mr. Harris's later volumes may supply this lack.

BOOKS OF THE WEEK.

Aikins, H. A. The Principles of Logic. H. Holt & Co. $1.50.
Ballagh, J. C. A History of Slavery in Virginia. Baltimore: The Johns Hopkins Press. $1.50.
Ballin, Mrs. Ada S. From Cradle to School. E. P. Dutton & Co. $1.25.
Barton, G. A. The Roots of Christian Teaching as Found in the Old Testament. Philadelphia: The John C. Winston Co.
Bridgman, Clare. The Bairn's Coronation Book. London: J. M. Dent & Co.; New York: E. P. Dutton & Co. 60c.

JUST PUBLISHED:

THE POEMS OF SCHILLER

Translated into English by E. P. ARNOLD-FORSTER. 360 pp. 12mo. $1.60 *net*. (Postage 12c.)

A new and comprehensive edition of Schiller's poems, exclusive of his dramas, containing twelve more poems and eighty more brief epigrams. "votive tablets," etc., than the most popular previous translation. One of the highest authorities on German literature in America has advised the publishers that this translation is much better than any heretofore made, and as good as Taylor's Faust, and that it imitates the original metre very successfully.

THE NEW POPULAR NOVELS

Each Cloth, 12mo, and, except where price is stated, $1.50

Ready This Week:

BRINTON ELIOT

FROM YALE TO YORKTOWN

JAMES EUGENE FARMER'S new novel portrays in the opening chapters old Yale from 1770-1773, when the faculty consisted of the President and six tutors—a Yale as new in fiction as the following treatment of the Revolutionary period.

THE LATE RETURNING

Price, $1.25.

MARGERY WILLIAMS, a new English writer, depicts with great skill the sharp, intense scenes of a South American revolution. An American reporter, the American Consul and his wife, the keen, cruel Presidente, with the leader of the insurgents, and the girl who stands between them, work out a story of unusual vividness.

THE CONQUEROR

BEING THE TRUE AND ROMANTIC STORY OF ALEXANDER HAMILTON.

GERTRUDE ATHERTON'S finest work, on which from Atlantic to Pacific the comments run: "Absorbingly interesting" (Boston Herald); "it shows audacity and originality" (New York Herald); "a powerful piece of writing" (Philadelphia Press); "created with remarkable power" (Record-Herald, Chicago); "fascinating and absorbing" (News Letter, San Francisco).

Ready Next Week:

THE VIRGINIAN

A HORSEMAN OF THE PLAINS

OWEN WISTER'S first novel as distinct from the short stories through which he is well known. His hero is a young Virginian transplanted to the Far West; at the wildest stage of a cowboy career he meets a young Vermont schoolteacher, who, though attracted by his virility, is repelled by his roughness. The story is illustrated by ARTHUR I. KELLER.

OLDFIELD

A KENTUCKY TALE OF THE LAST CENTURY

NANCY HUSTON BANKS describes in a charmingly refreshing story the quaintness and simplicity of life in the forties far down in the Pennyroyal region away from the world's highway; there are delightfully humorous touches, yet with a gradual deepening of its trend it touches the saddest and most insoluble phase of all Kentucky life.

DOROTHY VERNON OF HADDON HALL

CHARLES MAJOR'S new love story, "more intense and more fascinating than 'When Knighthood was in Flower,'" "a winsome, charming picture," "as animated and full of picturesque incident as ever pen created." Illustrated by HOWARD CHANDLER CHRISTY.

The Most Important New Books

JUST READY

THE PHILOSOPHY OF THE CHRISTIAN RELIGION.

By ANDREW MARTIN FAIRBAIRN, M.A., D.D. *Principal of Mansfield College, Oxford, Author of "Studies in the Philosophy of Religion," "Christ in Modern Theology," etc.*

Cloth, 8vo, 583 pp., gilt tops, $3.50 *net*. (Postage 25 cts.)

Dr. FAIRBAIRN may fairly be said to be the leading theologian in England outside the Established Church.

THE LOWER SOUTH IN AMERICAN HISTORY

By WILLIAM GARROTT BROWN, *Lecturer in History, Harvard University, author of "Andrew Jackson," etc.*

The treatment of the entire subject—of Yancey the fire-eater, of the Resources of the Confederacy, of the Ku-Klux movement—offers a point of view which is as rare as it is necessary. Cloth, 12mo, 271 pp., $1.50 *net*. (Postage 12 cts.)

PRINCIPLES OF SANITARY SCIENCE AND THE PUBLIC HEALTH

WITH SPECIAL REFERENCE TO THE CAUSATION AND PREVENTION OF INFECTIOUS DISEASES

By WILLIAM T. SEDGWICK, Ph.D. *Published May 7*

Professor of Biology and Lecturer on Sanitary Science and the Public Health in the Mass. Inst. of Technology, Boston; sometime Biologist to the State Board of Health of Mass.

"An elementary and timely statement intended for the use of students and amateurs as well as professional sanitarians and engineers, students of municipal affairs, teachers of household sanitation, general readers, workers in college settlements, tenement-house reformers, etc." 368 pp., cloth, 8vo, $3.00 *net*. (Postage 18 cts.)

THE RISE OF RELIGIOUS LIBERTY IN AMERICA

By SANDFORD H. COBB *Author of "The Story of the Palatines."*

A systematic narrative—never hitherto written—of that historical development through which the civil law came to decree entire liberty of conscience and worship. 541 pp., cloth, 8vo, $4.00 *net* (Postage extra.)

THE PHYSICAL GEOGRAPHY OF NEW YORK STATE

By RALPH S. TARR, *Professor of Dynamic Geology and Physical Geography at Cornell University, author of "Elementary Physical Geography," etc.* *To be Published May 28*

A regrouping of twelve articles published at the request of the American Geographical Society in the Bulletins of the Society between 1896 and 1900. A chapter on Climate is supplied by E. T. TURNER.

Cloth 8vo, 383 pages, over 200 illustrations, $3.50 *net*. (Postage 23 cts.)

The American Sportsman's Library. Edited by CASPAR WHITNEY

UPLAND GAME BIRDS

By EDWYN SANDYS and T. S. VAN DYKE. Illustrated by Louis Agassiz Fuertes, A. B. Frost, J. O. Nugent, and C. L. Bull.

Each in cloth, crown 8vo, gilt tops, **$2.00** *net. (Postage 15 cts.) Send for a descriptive circular.*

THE DEER FAMILY

By the Hon. THEODORE ROOSEVELT, T. S. VAN DYKE, D. G. ELLIOT, and A. J. STONE. Illustrated by Carl Rungius. Maps by Dr. C. Hart Merriam.

Limited edition, half levant, 8vo, Van Gelder handmade paper, **$7.50** *net per vol. (sets only).*

Ready Next Week in THE ENGLISH MEN OF LETTERS SERIES. Edited by John Morley

GEORGE ELIOT. By LESLIE STEPHEN, Editor of "The Letters of John Richard Green," etc. Cloth 12mo, 75 cts. *net*.

Books published at NET *prices are sold by booksellers everywhere at the advertised* NET *prices. When delivered from the publishers, carriage, either postage or expressage, is an extra charge.*

The Nation.

NEW YORK, THURSDAY, MAY 22, 1902.

The Week.

If May 20, 1902, was a great day for Cuba, it was also a day memorable and honorable in the annals of the United States. Four years ago, in a solemn appeal to the God of battles, this country renounced any intention of exercising jurisdiction over Cuba. It was, we vowed, to secure to the people of that island the blessings of self-government that we went to war, and on Tuesday we had the official notification of the President of the United States that the Government of Cuba was turned over to the people of Cuba. The vow is performed. We have changed not, even if we swore to our own hurt. The spectacle is one for general gratulation. We will not allow any of our fellow-countrymen to surpass us in rejoicing over the glory of our furled flag in Cuba. At the same time, we do not forget what is lacking to make the occasion one of unalloyed satisfaction as patriots. In spite of ourselves, and in the teeth of the good intentions of our people, we cannot be without a certain national shame that we are launching the Cuban republic on so unnecessarily troubled a sea. We have kept our main promise, but the subordinate pledges, the incidental duty, we have left unfulfilled. Only to our own President's message do we need to turn to find what command of "honor" in our relations to Cuba we have failed to obey. We have not been generous. We have not done our best to give the new Cuban nation a fair chance to live and grow. We have wished it prosperity, but we have withheld the means of prosperity. We have cast the bantling republic on the rocks. Everybody knows how this has happened. It is not that we have been ungenerous as a people. Americans, as a whole, would undoubtedly have been more than willing to match deed with word, and give the Cubans a livelihood as well as life. But a selfish commercial policy, which we adopted in the days of our provincialism, has remained to plague us now that our trade and our influence are touching the ends of the earth. Protection has, in the matter of commercial concessions to Cuba, given the crowning proof that it is, in essence, hostile to our true national power and dignity, and is smitten with that selfish blindness which made Spanish policy seem "decrepit and grotesque."

Some will see a pathetic significance in the chance which brought the coronation of the young King of Spain within three days of the date for setting up a Cuban republic. Yet there can be little doubt, and there are many in Spain to-day to assert it, that the loss of Cuba —especially of the Philippines—leaves the Spanish kingdom better off than it was with those colonial millstones hanging about its neck. The outlook for the boy King may not be particularly flattering, but it is far brighter than it would have been if he had come of age, say, in 1897. It is, by the way, interesting to read in that influential Spanish newspaper, *La Epoca*, a plea for the prompt recognition of the Cuban republic by Spain. It urges the Government not to make again the mistake which the Spanish authorities persisted in for so long—that of refusing to recognize the independence of Mexico and the various South American republics. Such a greeting of the new nationality would be very handsome on the part of Spain, and would doubtless arouse enthusiasm in Cuba; but we fear that the Spanish Government will not soon follow England's example in sending a minister to Havana. The reason is that the United States has so tied up the Cuban Government by means of the Platt amendment that the ordinary motives for establishing diplomatic relations with Cuba are destroyed. Foreigners will expect to transact their more important Cuban business in Washington.

The action taken in the Rathbone case does not imply that this offender is to have a new trial. It bestows upon the Supreme Court of Cuba the right to review the evidence taken, and to order a new trial should it find reasons for doing so, or should there be new evidence on behalf of Rathbone. This power of review and right of appeal did not exist, and had to be given at once by the President, as the Cuban republic was on the eve of establishment. The grant is in accord with legal procedure in this country. It will have one unpleasant result, in that the case will now drag its weary length along for many months more. When we think of the earnestness with which the Imperialistic press assured us, two years ago, of the speed with which the postal frauds would be punished, we cannot, in the light of the present freedom on bail of the most prominent offender, doubt that most of the moral effect of the punishment will be lost by the time that Rathbone's case is finally decided.

Far from disposing of the Danish West Indies in a hurry, the Landthing has put the whole matter over to September. This shows a gratifying independence of commercial considerations, for, in view of the precarious conditions of all the Lesser Antilles, any one having islands to sell would naturally sell them while it was possible to deliver the goods. It is said that St. Kitts and St. Thomas are beyond danger of volcanic disturbance, but this is a fairly hazardous assertion. In case of a calamity similar to that which has taken place at Martinique, might not the very interesting question arise, Who is to bear the loss—Denmark or ourselves? International law has, we feel sure, no precedent for the case of an island injured in transit. The offer of the United States is good until withdrawn, and probably the Government of Denmark might, following the example of conveyancers and express companies, disclaim responsibility for a depreciation in value fairly attributable to an "act of God." If this view of the case be just, the Danish Opposition can afford to delay proceedings for political purposes. Whether this is good business is very doubtful. If they were our islands, we should close with Mr. Hay's offer, and take the plébiscite to-morrow.

In connection with the blotting out of human life in Martinique and St. Vincent, we have seen much geological but very little theological speculation. Yet a hundred years ago the latter would have been the more prominent. The difficulty of accounting for such natural evils (as theologians call them in distinction from moral evil) was one which sorely tried the reasoning powers of the eighteenth-century divines who attempted to vindicate the ways of God to man. The cheerful optimism of the English Deists dealt with the matter in a different spirit. Pope enunciated their doctrine, which John Morley says was "only a particular way of repudiating Christianity." The "Essay on Man" takes the comfortable view that "plagues or earthquakes break not heaven's design." A common theory of the older theodicies was that natural evil did indirect good by promoting virtue. Such reasoning would maintain, we suppose, that the Creator destroyed 30,000 human beings in Martinique in order to cultivate the grace of generosity in the United States.

The Boston *Herald* calls attention to the fact that, of all the 350 cases of officers and men tried in the Philippines which were recently sent to Congress by Secretary Root, only one is that of a trial for torture. For hanging certain natives by the neck for ten seconds, a captain and lieutenant were found guilty and given the terrible punishment of receiving a reprimand. This was quite in keeping with the sentence of Lieut. Preston Brown for murdering a native. His pro-

motion to captain was delayed about three months. In the case of Capt. James A. Ryan, Fifteenth Cavalry, a special investigator sent by Gen. Chaffee reported of Ryan's victims that

"each individual, before being examined, had his arms tied to his body in such a manner that he could not protect his head when falling. Then he was stood up erect upon a wooden floor and had his legs knocked from under him; then his body was lifted and his head jolted against the floor once more, whereupon he was stood upon his head in a bucket of water for a certain length of time and then was examined. This process was employed three times in succession before Waldo Abing made his statement. About a dozen of the natives are said to have been tortured in this way."

Capt. Ryan was not put on trial by Gen. Chaffee until the latter was ordered to do so from Washington. Nothing quite so discreditable as this has yet been said about Gen. Chaffee, but there are plenty of less flagrant cases in which he has also failed to do his duty, and shown himself the poorest kind of disciplinarian. Not until Major Waller, an officer of another service, offended, did he find it his duty to ask Washington for a court-martial. Whatever the outcome of this whole question of misconduct in the Philippines, there can be no question that, if Secretary Root and Gen. Chaffee had taken vigorous measures to stop it, the thing would have been checked in its inception. There was plenty of evidence in the Brown case to show how far the demoralization had gone, for officers hitherto favorably known testified then that it was their practice to kill Filipinos without even hailing them. What was the use? they asked. We don't understand Tagalog, and the Filipinos do not know what "stop" or "halt" means.

That much-abused, high-minded, and benevolent assimilator, Gen. Jacob H. Smith, familiarly known as "Hell-Roaring Jake," would seem to be in trouble again. This time it is a miserable Civil Governor, in Leyte, a Capt. J. H. Grant, who accuses him; not one of those absurd humanitarians or weak-kneed Anti-Imperialists who protest against the killing of women and children. The Governor complains, it seems, because the military authorities sustained a severe fright after the massacre at Balangiga, and did many things to hinder the progress of civil government. One of "Jake" Smith's little jokes was the arrest of 150 refugees from Samar who had fled to Tacloban, and this without warrant or process of law. Owing to the nervousness of an officer in charge of a detachment, a number of innocent laborers were killed or wounded in broad daylight, and one citizen was killed as far back as September 30 last by a sentry. About all this Gov. Grant plaintively remarks, "Of course, the people do not understand why these things should take place under civil government." Worst of all, Gov. Grant hints that our noble "Jake" belongs to the Funston class of "newspaper generals," and accuses him of carrying with him his own reporters to blow his horn wherever he goes. These reporters naturally overlooked the fact that Gen. Smith had brought about no captures or surrenders in Leyte. Plainly there is something wrong with Gov. Grant. Like other offenders, he is perhaps "demented," and we expect that Senator Lodge or the *Army and Navy Journal* or other defenders of military crime will demand his scalp at once. They should have it. Any one who would attack our greatest hero, Jacob H. Smith, whose likeness to Sherman and Sheridan is now patent to all our people, should hold no office under "Old Glory."

Though Mr. Carnegie's offer to take the temporary assignment of the Philippines in the interest of peace was of an unusual nature, we think the New York *Times*, with its customary instinct for picturesque and sweeping condemnation, is unduly severe with him. His offer to reimburse the Government for the $20,000,000 stipulated in the Treaty of Paris, and his solicitude to assure the Filipinos that their desire for independence would be gratified, show certainly great generosity and insight into the larger moral issues involved Mr. McKinley could not well accept such an offer; he may well have been surprised at receiving it, but we may be sure that he never said or thought that the proposal was "reckless and wicked." If the *Times* would once rise above its joy in denunciatory rhetoric, it would see that Mr. Carnegie's offer, although impracticable to-day, may be the prophecy of a new era of insular government. How many islands now challenge the beneficence of our latter-day millionaires! Mr. Carnegie wished to buy in order to prevent an insurrection. Other great operators might prefer to purchase an active revolution and a field for diplomacy.

If any lingering doubt remains as to the abstract morality of Mr. Carnegie's insular ambitions, none whatever attaches to his friend Mr. Schwab's purchase of a portion of the south shore of Staten Island as a pleasure ground for the poorer children of the city. Richmond Beach is admirably adapted to that use, and Mr. Schwab will undoubtedly work out sagaciously the practical details of his unique charity. The plan, so far as it has been announced, contemplates the free carrying to the beach of from one thousand to two thousand children a day through the whole summer season, and provision for their comfort and amusement while they stay there. The project will have the cordial approval of all who are interested in work for children, but undoubtedly Mr. Schwab will value more highly the gratitude of thousands of youngsters relieved from the killing heat of the city, and transferred from bricks and asphalt to clean white sand and the refreshment of the sea.

The position of Grand Sachem of Tammany Hall is not an important one in the organization. It is not the rudder of the ship, but the figure-head. In choosing Justice O'Gorman, however, instead of ex-Mayor Van Wyck, Tammany did well. Mr. O'Gorman is a jurist of distinction and a citizen of good repute. So far as a figure-head can serve to give respectability to a thoroughly bad organization, Mr. O'Gorman's name may be of some advantage to the party to which he belongs. If there is a real reformation going on in that quarter, its results will be shown next fall when Congressional nominations are made. It is for the public interest that the representation of New York in the House of Representatives, both Republican and Democratic, should correspond in some measure to its importance in population and commerce, and not fall below the average of the rural districts of our own and other States. If Justice O'Gorman's election prefigures an improvement in that quarter, we shall welcome it when it comes.

Politicians, of course, always consider any new development with reference to its effect on the next election. Consequently the talk among them now is about the bearing of the upheaval in Tammany upon the contest over the Governorship next fall. There is general agreement among them that, as things look at this time, the Nixon incident and the party demoralization which it inevitably involves have destroyed whatever chances the Democrats had before of beating Odell for a second term, if the Governor shall accept a renomination, as everybody now expects that he will. But the results of the present disclosures about Tammany will extend far beyond next fall, and will have a great influence upon the municipal election of 1903. Mr. Nixon's ignominious failure in the attempt to serve as a respectable figure-head for Tammany has shown the city how helpless Mr. Shepard would have been in the mayoralty if he had been elected as the one good man, with his hands tied, in a Tammany Administration. This lesson will sink more and more deeply into the public mind as time passes and the election of next year approaches. It is already clear that no Shepard will then be willing to try the rôle of decoy for a gang of corruptionists, or that, if anybody can be found foolish enough to sacrifice his reputation, he will get only the vote which a typical Tammany man would poll. The question, a year from next fall, will be simply whether the city wants a continuance of

the good government it is getting under Mayor Low, or whether it prefers to wallow again in the Tammany mire. It is an immense gain to the reform cause that the issue is being made so plain.

The ratification on Monday, by the Steel Corporation's shareholders, of the proposal to convert $200,000,000 preferred shares into bonds was, we suppose, expected by everybody. The plan was endorsed by a larger vote of shareholders than the two-thirds required by the New Jersey law; this, too, was in accord with expectations. The Finance Committee did not formally propose the measure, we understand, until it had satisfied itself that such a majority vote of shareholders could be depended on. It is in order, therefore, to advance the argument that, the shareholders having formally approved, the directors have been justified in proposing the bond conversion, and that criticism ought to be stopped. We are unable to accept this argument; first, because if a financial proposal is wrong, it would not be made right even by a unanimous vote of shareholders, and, second, because the shareholders' vote was not unanimous, a minority of some 12,000 shares not only voting against the plan, but protesting in the meeting against it. The strong point of these dissenting speakers lay in their charge that no one had yet informed them why this action, entailing possibilities of great significance, had to be taken at all. You ask us, so said the opposition speakers at Monday's meeting, to run the company in debt to a large amount when we get no new assets whatever in return for it. You offer a commission of something like ten million dollars to a syndicate for the service of guaranteeing the operation, when the conversion could almost certainly be carried out without any intervention. Why were you forced to make so hazardous a move, and why must you pay so great a price for it? Judge Gary, Chairman of the Board, replied to the critics at the meeting in these words: "I am not going to argue the merits of this question now, though personally, and at another time, I shall be glad to explain to you the reasons why these steps were proposed."

Probably the fact that our excess of exports for the ten months of the fiscal year, up to April 30, has fallen off $148,000,000 from the year before, will startle some readers. It is startling, however, only because so much was made, in the three or four years preceding, of what the paragraphers used to call our "gigantic European credit fund." Analysis of the figures of the trade report shows $70,000,000 decrease in ten months' exports. But, of this decrease, fully $63,000,000 is accounted for by the corn and oat-crop failures of last season. Imports for the same period have increased $78,000,000; but recent detailed reports have clearly shown that much the larger part of that increase was in foreign raw material needed by our manufacturers. In the main, both movements are entirely normal. That they are looked on, in Wall Street, with some misgiving, is explained by the well-known fact that our "foreign credit fund" is being rather rapidly replaced by a "foreign debit." Calculations of economic experts, regarding Europe's indebtedness to us or ours to Europe, count for little in the face of a situation where our bankers and stockbrokers are borrowing in London by the million, day after day, to keep their various "deals" in motion.

A system of legislative representation which assigns one member to any town having less than 2,000 of population, two to a town of between 2,000 and 50,000 people, three to a town of 100,000, and four to a town in excess of 100,000, would be hooted at in any State except Connecticut. But the adoption of this system in the Constitutional Convention of that State is a measurable improvement on the existing plan, which ranks the town of 500 with the city of 100,000. What little of triumph there is in this result rests with the reformers in the Convention, who forced this small recognition of population in representation. Fears of the verdict of the voters contributed as much as argument to this end, but the belated recognition of public opinion shows that the Bourbons of Connecticut are learning. At the outset nothing would satisfy them but a recognition of the flat equality of the towns, and the concession now made is born of the political necessity of saving the State to the Republicans. Control of the Legislature is retained in the hands of the little towns, although the representation of many of them is cut one-half. How the Connecticut voters will receive the mongrel representation system adopted remains to be seen. Probably the Republican managers in the State will welcome the outcome as a relief from a threatening political situation, while the voters generally may accept the little reform offered, with the abandonment of the town-equality idea, as a vantage-ground from which to contest for more.

The opening in Berlin on April 15 of a bureau of information for Germans intending to emigrate has given rise to considerable comment on the part of those who see in this undertaking an effort to direct the stream of German emigration into South America or the Imperial colonies. This impression has been heightened by the appointment, as head of the bureau, of a gentleman who has lived many years in South America. The cost of the office is paid partly by the Government and partly by the German Colonial Society. The Berlin *Tageblatt* emphatically denies that there is the slightest desire to discriminate against the United States, and says that the bureau will advise all asking for information to go where the economic conditions are most suitable. Most of the applicants will, it believes, be largely influenced by reports from relatives or friends who have preceded them. At present the *Tageblatt* thinks that the opportunities in Brazil are somewhat better than those in the United States. It believes, however, that the average German is far more attracted by the prospect of living in an Anglo-Saxon community than in a Latin one. In Brazil and elsewhere the immigrants find themselves so little drawn to the people of the country that they are forced to build up communities for the companionship and society of their fellows. It is by no means certain that such communities are of as much service to the Fatherland as is the body of intelligent German-Americans in this country, While acquitting the German Government of the slightest desire to work against the United States, the *Tageblatt* thinks that, instead of striving to make emigration easier, it should find out the causes which drive Germans away, and seek to remedy them by proper industrial and agricultural programmes and laws.

An article in *Blackwood's Magazine* upon the British irregulars enlisted in Cape Colony at the close of 1900 reveals one reason why the Boer opposition to the English has been so bitter and unyielding. Believing that the war was over, hundreds of men, all of them belonging to the much-abused Outlander class, about which Mr. Chamberlain and his party felt so keenly, emerged from their places of refuge in the hope of free transportation to the gold fields. "A mass of degraded manhood," "Greek, Armenian, Russian, Scandinavian, Levantine, Pole, and Jew"; "jail-bird, pickpocket, thief, drunkard, and loafer"—these were the men, it seems, who formed the irregular corps which swept through the Orange Free State and the Transvaal, burning farms, destroying supplies, and carrying out the policy of reconcentration, while "sullying beyond recognition," by associating with them, "old, honored, and existing regiments." Even so pro-British a military paper as *Broad Arrow* admits that "this scum of humanity under British enlistment gave new life to our enemy," who saw in these English recruits men to whom "surrender brought no qualm or disgrace, being possessed of no faculty sensible to shame." These were the men whom England went to war for, and asked to aid her in taking their country away from the Boers.

CAPTAIN MAHAN ON IMPERIAL FEDERATION.

In the current *International Review* Captain Mahan calls attention to the fact, full of interest, as he says, for all Americans, that Great Britain has passed, within the last twenty years, through two crises—that of Home Rule and that of the South African war; both of which he regards as mile-stones on the road to Imperial Federation. It might, perhaps, be questioned whether either crisis is at an end. The Irish question seems as angry as ever: the hundred and first coercion act is just going into operation; and the King, while he crushes the two commonwealths in South Africa, is afraid to set foot in a portion of his own realm. If South Africa is conquered, it is not settled or reconciled, or likely to be settled or reconciled, for many a day. But, waiving this, what have the two crises in common? Great Britain and Ireland are by nature linked together. Great Britain and South Africa are by nature placed wide apart. The same men have upheld the union with Ireland and opposed the South African war. Cecil Rhodes subscribed to Home Rule. The war was sure to rekindle Irish feeling against England; but any other quarrel into which England had got would have done the same.

Captain Mahan sees an analogy between the formation of the American Union and that of the British Empire, both being, as he thinks, brought about by constraining circumstances. The American colonies, he says, began their attempt under the difficulty of mutual alienation. The American colonies, however, were homogeneous in every respect except slavery, which at that time was of secondary importance. Territorially, they were in a ring fence; they were drawn to each other by the most imperative interest, and prepared for political union by confederation in a war for independence. What is there answering to this in the case of the heterogeneous and scattered members of the British Empire? Of what is this empire, the union and future confederation of which are supposed to be the manifest dictate of nature and destiny, composed? It is composed of the thirty-seven millions of people of Great Britain, whose union is complete, saving the semi-nationality of Wales and the strong provincialism of Scotland; the Canadian confederation, partly French, on one side of the globe, and the Australian confederation and New Zealand on the other; South Africa, now wrecked and disaffected; a group of extinct slave plantations in the West Indies, inhabited by two races utterly alien and sometimes bitterly hostile to each other; a provisional protectorate in Egypt; dominion over savage tribes in South Africa; some scattered fortresses; and three hundred millions of Hindu bondsmen, unassimilable aliens, who constitute about five-sixths of the whole population of the Empire. What common law, aspiration, or destiny, what common mission, divine, mystical, or diabolical, can be supposed to pervade, animate, and move such a miscellany as this? Australia is actually passing exclusion laws against the three hundred and odd millions of the black and brown subjects of the Crown. Apparently she intends to exclude them even from her mercantile marine. Dubbing the King an "emperor," which there is just now a passion for doing, will not produce unity where there is none; though it may have a sinister influence on the constitutional character of the British Crown.

Has there, in the thirty years during which Imperial Federation has been preached, been any visible advance towards its realization? The movement has been rather the other way. The jurisdiction of the imperial court of appeal, the Privy Council, which was about the only real vestige of the once imperial authority, has been curtailed by Canada and still more by the Australian confederacy. Australian federation, instead of being a step towards the union of the Empire, is a step towards more complete independence, and is avowedly regarded in that light. The South African war has called forth in the British population in the colonies a gush of British sentiment, largely mingled, however, with bellicose excitement and the love of military adventure. But when the Colonial Secretary invites the Canadian and Australian Premiers to a conference on military and commercial relations, the Canadian Premier answers that he is at liberty to confer on commercial relations alone, while the Australian Premier flatly declines military amalgamation, saying that Australia will provide for her own defence. Lord Salisbury is accordingly awakened to recommend caution and delay.

Captain Mahan admits that Imperial Federation cannot be worked without an organization of some kind. But what the organization is to be he deems it over-curious to inquire. Yet the inquiry is surely needful if the scheme is to get beyond vaporing and a practical effort for its realization is to be made. Where is the supreme power to reside? How are its decrees and requisitions to be enforced? Who is to have the direction of the foreign policy? What is to be done with the three hundred millions of Hindus? How are communities at opposite sides of the globe, knowing hardly anything of each other, to be brought to think and act in common? The fact is, that if you mean to have an empire, you must have an emperor.

"Imperialism," says Captain Mahan, "the extension of national authority over alien communities, is a dominant note in the world-politics of the day." In certain quarters it unquestionably is. There are people who, having discarded the morality of the past, and taken to obeying the indications of "the stars in their courses," are bent upon "imposing peace" upon the whole world, and, if they are Britons, upon "painting the world red." But this is a different thing from a spontaneous confederation, and its first practical applications have aroused very serious resistance.

> "Upon us has devolved, by an inevitable sequence of causes, responsibility to our conscience for an assemblage of peoples in moral and political childhood; and responsibility, further, to the world at large, and to history—the supreme earthly judge of men's actions—for our course in the emergency thrust upon us. As such, the United States has accepted the burden. Its duties are not to be discharged by throwing them overboard, or by wrapping our political talent in a napkin for our own national security and ease."

So the pious McKinley was always telling us, and, were he alive, would be telling us now, probably with increased unction, in face of the "water-cure" and the edict of extermination. But think of an honest tar like Captain Mahan talking such flummery! The other day the Boers were told that they must not call it war to the bitter end, but war to the sweet end; such luscious blessings were in store for such of them as might be left alive. Is not this enough to sicken Tartuffe?

The crisis in South Africa, by the way, can hardly be said to have strongly confirmed Captain Mahan's famous theory about the ascendancy of sea-power. A pair of parochial commonwealths, without a cock-boat on the sea, have for two years and a half withstood the entire force of the greatest sea-power that the world has ever seen. We do not venture to criticise Captain Mahan's theory from a professional point of view; but when it is viewed historically, its foundation appears narrow. Which of the great empires in ancient or modern history has been especially a sea-power? Can this be said of the great Eastern empires, Assyrian, Median, or Persian, of the Empire of Alexander, of the Roman Empire, of the Empire of Charlemagne, of the Saracenic Empire, of the Turkish Empire, of the Spanish Empire, of the Austrian Empire, of the Russian Empire, of the Empire of Napoleon? The great sea-power of antiquity was the Carthaginian, which succumbed to the land-power of Rome. The power of Venice was confined to the sea or to commercial factories, and was killed by a change in the line of trade. Great Britain is an island realm singularly happy in commercial position. Naturally she became a great naval power. But her dominion has been limited to the sea. When, in the great French war, she had destroyed the other navies (which, it must be remembered, had been disorganized by the Revolution), she was herself secure from invasion, and was enabled to pick off the outlying depen-

dencies of the enemy; but in the great struggle on the Continent she was powerless, or could do nothing but subsidize, till a footing on land was given her by the insurrection in Spain. In the struggle with Louis XIV. the fleet, though it gained a victory at La Hogue, played a very secondary part. The chief part was played by land armaments, to which Great Britain sent contingents under William III. and Marlborough. The naval preëminence of Great Britain, with its sources and effects, was already a pretty familiar fact. Is not this the principal basis of Captain Mahan's famous revelation?

LIGHT ON THE COAL STRIKE.

In the general confusion and ignorance about the causes and the merits of the coal strike, an article in the *Yale Review* for May comes as a real illumination. It is a survey of "The Anthracite Coal Situation" as it stood on May 1, and is from the pen of the Rev. Dr. Roberts of Scranton, Pa. We find in it, what we have seen nowhere else, a quiet and impartial account of the status of the whole controversy between miners and operators, with an intelligible statement of what the grievances of the miners really are, together with much light on the nature of employment in the mines, as on the peculiar constitution and the motives and ambitions of the United Mine Workers. All told, this short article is a light in a dark place.

To begin with the complaints of the miners, Dr. Roberts makes it clear why there was such a diversity of view in the convention that voted the strike, and why the sentiment of the northern coal-miners was so much more violent than that of the southern and middle fields. In the latter region, where the Reading Coal and Iron Company is supreme, there are practically no grievances, except against a few individual operators, and the men did not want to strike. The delegates from the Schuylkill districts were the conservative and moderating element in the April convention at Shamokin, as well as in the recent one at Hazleton. Yet at both they declared that if the grievances of the workers in the Wyoming and Lackawanna valleys were not redressed, they would join them in a strike, so as to present a united front for the whole Miners' Union. What, then, are the complaints of the miners in the northern coal fields? In a word, breach of faith on the part of the operators. They have not, so the miners assert, lived up to the terms of settlement of 1900. "The managers then promised that contract prices and allowances which had been reduced should be restored, that excessive dockage should no longer prevail, and that all reasonable grievances should be locally adjusted. This," the miners declare, "has not been done."

These local grounds for strike in the First District do not, of course, tell the whole story. They account for the greater intensity of feeling among the northern delegates, but do not cover the case. There are demands for new privileges as well as for redress of old grievances. The weighing of coal is insisted upon, with the ton reckoned at 2,240 pounds, instead of 2,700. A return to the old custom of loading coal even with the top of the car is also demanded, with the abolition of the eighteen inches of "topping" now required by the foremen. There are also details about uniform wages for working the same veins, uniform rates for contract work throughout each district, and uniform allowances for timber and water —that is, where a miner has to timber his own chamber or bail water. Finally, there is the demand for an eight-hour day, at present wages.

This last relates only to mine laborers, and thereby hangs a curious tale of the organization of the Union. It is really composed of conflicting elements—the boss miners and the laborers. The former pay the latter, so that when the laborers strike for higher wages, they are really striking against brothers in their own Union. The miners, for their part, dexterously shift the strike over to the operators. What they say is, in effect, "Grant us higher wages, and we will increase the pay of the laborers." Dr. Roberts reports other grievances of the laborers which are valid, not against the companies, but against the miners. Most of the laborers are foreigners, principally Slavs; the miners are Anglo-Saxon. Under the mining laws, after a laborer has worked two years he is entitled to a miner's certificate, and to be assigned a chamber of his own. But a vacancy must exist, and the boss miners see to it that one seldom occurs. The laborers discover that most of them will be kept laborers for ever. This makes them bitter against the miners, and they have often threatened an independent organization. Another grievance of theirs is the violation of the State mining law, which forbids miners to leave the laborers alone in charge of the chamber. This is habitually done in the northern field, where "the major part of the miners are home at noon," with their $3 earned, while the laborers work on for ten hours for $1.75. Thus it is clear that a large part of the trouble is what may be called internal to the Union. This is made up of two classes whose interests clash, and to adjust these the operators are called upon to pay higher wages.

Dr. Roberts also makes it evident that a strike now and then is almost the vital breath of the Union, as now constituted and led. We quote a significant passage:

> "The leaders of the miners' organization are kept busy devising means whereby the interest of the members in the Union may be maintained. Indifference, jealousy, and dissension are constantly invading its ranks. During the last year, when the industry was to a great extent peacefully conducted, the interest flagged. About 20 per cent. of the men neglected to pay their dues, and another 20 per cent. perfunctorily paid their money, and took no interest in the organization. When the last convention was called, and the rumors of conflict filled the air, the delinquents soon fell into line. The Union is only interesting to a large number of its members when a conflict is impending."

Evidence is adduced also of the inability of the Union to control its members, even when it is "recognized." They are a restless set. To keep them in line, 140,000 strong, and with all their diversity of race and of interest, seems impossible to any leader. Mr. Mitchell was asked by the president of one of the coal roads, "Are you able to hold your men in hand?" "Yes," he replied confidently. "But," said the other, "they had 123 strikes last year." This was true, says Dr. Roberts. In spite of the agreement of 1900, accepted by the Union, there were in 1901 no less than 123 strikes in the 450 mines operated—that is, one in every fourth colliery. And in nearly every case these local strikes were the result of utterly unreasonable demands made upon the employers. No wonder that the companies are shy of putting themselves in the hands of such a slippery labor organization.

Any one who will read attentively this informing article in the *Yale Review* cannot fail, we think, to conclude that this half-hearted strike was founded on about one part of real grievance to nine parts of an emergency within the Miners' Union. It was a case of strike or disruption. The discontent was more within the labor organization, and on the part of one of its classes against the other, than in the conditions of the mining industry as a whole. President Mitchell apparently did not want a strike, but was the victim of the unruly Union behind him, and of his own promises, made in undue reliance upon political pressure and the intervention of the Civic Federation. The inference is unavoidable that the strike should never have been declared, and should now be promptly settled on the best terms attainable, or "called off" in confession of mistake and failure.

THE REAL TAMMANY.

Mr. Lewis Nixon's selection as leader of Tammany Hall always seemed to us as absurd as the appointment of a New England deacon to the command of a pirate ship. Yet, with his ideas of naval discipline, he seemed to think that a good man on the quarterdeck would speedily reform the cutthroats in the forecastle. He ostentatiously hauled down the black flag. He made the crew throw away their cutlasses, and piped them regularly aft to prayers. They entered heartily for a time into the spirit of the joke—one of the best of their late captain's, Deadeye Dick, they thought it

—spruced themselves up, left off their grog, plotted their piracies and murders only between-decks, and undertook to be in public as sweet and submissive as a Pirate of Penzance. But this could not last. The free life of the buccaneer on the bounding wave, watching for his prey, soon reasserted its power over them, and they promptly notified their reforming commander that the little farce of his nominal leadership was over.

This is the real significance of Mr. Nixon's indignant retirement from the headship of Tammany. He has at last discovered, what he should have known from the first, that light hath no fellowship with darkness, and that an honest man, bent on good municipal government, is as much out of place among existing Tammany sachems and district leaders as a Sunday-school superintendent would be in the councils of Beelzebub. The whole thing was a fraud and imposture from the beginning. We do not say that Mr. Nixon was a party to the attempt to deceive the public. His character he has saved at the expense of his intelligence. He vowed from the first that he would not be a mere figurehead, though every one knew he was just that; and when even he found out that both Croker and the other Tammany magnates had been playing false with him all along, he did the only thing left for an honest man to do—openly said that an effort had been made to cheat and trick him, and that he would have no more to do with an obvious imposition.

The result is of the highest public utility. It leaves Tammany once more unmasked. We see it as it is. All the hypocritical pretences of change of heart and change of method are swept away. Mr. Nixon has, in fact, been of signal service to the city. It took just his peculiar combination of qualities to make the demonstration which he has now afforded us—namely, the complete demolition of the one-good-man theory. The wayfaring man can now perceive that a den of thieves remains a den of thieves even if presided over by a saint. Mr. Nixon seemed as if designed by a kind fate for the very work he has now performed. Even Croker's sagacity would have had to search long before finding another tool so perfectly fitted to his hand. Mr. Nixon was solemnly in earnest. He really seems to have thought that Tammany could be reformed, as the Duke of Wellington imagined England could be governed, by word of command. He had honesty and ability enough to admit that reform was necessary, but his perceptions were so dull, or his experience so slight, that he did not see how impossible it was for Tammany to commit suicide—for a self-reformed Tammany is necessarily a self-killed Tammany. His public utterances about his plans and purposes were, in truth, so exquisitely grotesque that his good character was established by his bad reasoning. As Curran said of an opponent, he could not argue so foolishly if his intentions had not been excellent, and the more he showed that his head was disconcerted, the more he convinced you that his heart was sincere.

Well, it is all over now, and a great moral lesson has once more been set the city. No one, we beg leave to say, ought to take it more to heart than Mr. Edward M. Shepard. In Mr. Nixon's fate he may see, in little, what his own great catastrophe would have been had he succeeded as Tammany candidate for Mayor. It is transparently clear now that, in choosing Mr. Shepard as a nominee, Croker was trying to hoodwink the voters of this city just as he tried to delude them later by the preposterous choice of Mr. Nixon as his own successor in an office which he had never really abdicated. He intended, and he almost openly plotted, to retain the real control of the mayoralty, if Mr. Shepard should be elected to it, as truly as it is now confessed even by Mr. Nixon that he meant to keep his powerful hand on Tammany Hall though another man was nominally in his seat. We never doubted Mr. Shepard's pure purpose. But what does he think now of those suspicions of the "sincerity" of the Tammany professions of reform, which he said in his canvass, and afterwards in his *Atlantic* review of the election, did so much discredit to those who entertained them? We maintain that the Nixon episode is a complete vindication for those personal friends of Mr. Shepard who would not accept even him at the hands of Tammany. There was no real thought of reform within the Wigwam. It put forward a splendid decoy, but what it meant to do with power, once got under false pretences, all can now see. With a Board of Estimate packed against Mr. Shepard, in the event of his success, his best exertions would have been in vain, and he would have been as openly shorn of real power, and as publicly humiliated, as Mr. Nixon has been, without that gentleman's resource of a wrathful flinging back in Tammany's face of a fraudulent commission.

The whole incident is most enlightening. We shall not again easily give credence to those who would persuade us that Tammany may rise above its source. Based on a theory of cohesion in plunder, it can know no community of interest except that of despoiling the community. Politics is only applied human nature. Given the character of the men who constitute a political organization, and you can tell what the character of the organization will be. A ruffian is a ruffian still, even if he has enriched himself through Tammany and poses as a political leader. Mr. Nixon has bitten this truth into the public mind most usefully. The immediate future of Tammany Hall does not deeply concern us. Whether Croker will be compelled to return to fight for his life; whether the anti-Croker revolt will prevail, we do not know, and we do not greatly care. The important thing is to have the mask of decency fall from the sleepless enemy of the city, at this stage of a reform Administration. One effect must be to multiply the number of those who will hold up Mayor Low's hands. Another will be to increase the tribe of those who are convinced that Tammany Hall, as it exists to-day, is past praying for politically, and that the only part of the liturgy applicable to it is "the compendious forms of the Commination Service."

THE STUDY OF ART IN THE UNIVERSITY.

Columbia University makes a significant innovation in detaching the Schools of Architecture and Music, respectively, from the faculties of Applied Science and of Philosophy. This change, apparently dictated by mere convenience of administration, is really the first stage in the formation of a School of Fine Arts. The scheme appropriately originated in the School of Music, by whose director, Professor MacDowell, it was presented to the governing body. It is probably the first time in the history of American education that the study of art has had full recognition from a university; and while Columbia has at present, aside from the Schools of Architecture and Music, chiefly good intentions and high ambitions to offer, those who believe that art is a proper subject of university study will at once welcome this hopeful beginning, and watch with keenest interest the further development of the scheme.

The statement that Columbia occupies the position of pioneer in this matter will doubtless provoke dissent. Many will say that Yale has a special Art School; that Harvard and Princeton, among others, have long offered excellent courses in the history of the fine arts; that the women's colleges particularly have always given art a prominent place in their curricula. But the aim of nearly all these courses has been collegiate or practical. A college may have especial facilities for teaching painters and sculptors—Yale has—just as it may have in its gymnasium especial provision for producing swordsmen; but either is quite aside from collegiate study, properly so called. A college may have general informatory courses to stimulate an interest in the fine arts, as it has similar courses in science and literature, but this again is something quite different from a university department of art. If the report of the Columbia Committee on Education and the recent action of the trustees meant nothing more than this, it would deserve only passing comment, but we assume

that the University intends, as soon as may be, to give to its School of the Fine Arts the general relation to its scheme of studies which instruction in the fine arts holds, for example, in the University of Berlin or the schools of Paris.

As the object of all university instruction is research, and as its methods are historical or experimental, it must be assumed that Columbia University wishes to produce primarily, not artists, but competent historians and critics of the arts. Professor MacDowell of the Music School does something more than produce pianists: he trains his students in the theory and history of music. So, too, the School of Architecture, when it takes its place in the new department, must do more than train practising architects; it must provide for those who wish to learn everything that is known about the history and theory of that subject, as well as its relations to general æsthetics.

Of course, study of this kind requires great collections of materials. On the experimental side, indeed, it is best conducted in the museums. When the French Government decided to train students in that concrete knowledge of objects of art which we call connoisseurship, it set up its school in its greatest gallery, the Louvre, from the curators of which it largely drew its teaching force. Unluckily, neither the organization nor the personnel of our American museums permits of that solution; but Columbia University is fortunate in being in intimate relations with the Metropolitan Museum, which must be its great storehouse of examples. For years Columbia has maintained admirable public lectures at that institution—a mutually helpful relation, which is susceptible of further development. A university school of art must have comprehensive collections of photographic and other reproductions illustrating art history. Here Columbia is already the fortunate custodian of the Avery Architectural Library, which may readily be extended to cover the entire field of the arts. The inevitable disadvantage of such a school is its distance from the great originals. This difficulty, however, may be measurably surmounted by a system of fellowships, which will permit the best students to attend the Continental schools, especially the American schools in Athens, Rome, and Paris.

How serious the undertaking is, and how different from the mere talk about the Correggiosity of Correggio, which is often—and properly, perhaps—the staple of the popular lecture, has been already indicated. But in emphasizing the difference between the ideals of university education in art history and theory, and those—quite as legitimate in their way—of collegiate and popular instruction, we have not meant to imply that these ideals are in any way incompatible. The training of connoisseurs and art historians should do much to disseminate information and promote taste throughout the land. Such critics are the very ones who in the intervals of their severer studies should find time to show the relation of art appreciation to culture and the genuine pleasures of life. If the Columbia School of Fine Arts only undertook to produce specialists, it would still require no apology; for this country is now in the position of acquiring art treasures, with few to interpret them, of founding great museums without competent curators to direct them. We need intermediaries between ourselves and the increasing store of masterpieces which we hardly have the time or the knowledge to enjoy.

Columbia has ever exalted her civic office, and there need be no fear that the new school will turn out unserviceable pedants. Its students should supply us with better professors for the colleges, better critics for the press, better curators for the museums, better writers and lecturers for the people. It should do much to lend a grace to our too material civilization. It is precisely because the interest of this educational innovation transcends merely academic considerations that we welcome it and bespeak for it the most generous support.

EDWIN LAWRENCE GODKIN.

The brief autobiographic sketch contributed fifteen years ago to the 'Cyclopædia of American Biography' needs little extension to cover the salient incidents in the life of Mr. Godkin, who passed away on May 20 in Brixham, South Devonshire, England.

"He was born in Moyne, County Wicklow, Ireland, October 2, 1831. His father, [Rev.] James, wrote a 'Religious History of Ireland' (1873). The son was educated at a grammar-school near Wakefield, England, and at Queen's College, Belfast, where he was graduated in 1851. He was a correspondent of the London *Daily News* in Turkey and Russia during the Crimean war, 1854-'6. In the autumn of 1856 he came to the United States, and in the ensuing winter made a journey on horseback through the Southern States, a record of which appeared in letters to the *News*. He studied law under David Dudley Field in New York city, was admitted to the bar in 1859, practised for a few years, and then went to Europe, owing to impaired health. He returned to New York at the close of 1862, and was a correspondent of the *News* and an editorial writer for the New York *Times* until July, 1865, when he established and became editor of the *Nation*, which in 1866 passed into the hands of Mr. Godkin and two other gentlemen [James Miller McKim and Frederick Law Olmsted] as proprietors. In 1881, the *Nation* was made the weekly issue of the *Evening Post*, and Mr. Godkin became one of the editors and proprietors of the joint publication. He is the author of a 'History of Hungary, A. D. 300-1850' (London, 1856), and of the work on 'Government' in the 'American Science Series' (New York, 1871)."

In his 'Random Recollections,' published in the *Evening Post* of December 30, 1899, he might have told of the honor of the degree of M.A. conferred by Harvard University in 1871; of D.C.L. by Oxford in 1897. It is necessary to add to his published writings 'Reflections and Comments,' a selection from his articles in the *Nation;* 'Problems of Modern Democracy,' from contributions to the magazines; and 'Unforeseen Tendencies of Democracy,' *Atlantic* papers. Mr. Godkin was twice married. His wife and a son survive him.

A great journalist has departed. His name, absolutely unknown to the American public in 1865, blazed up instantly upon the appearance of the *Nation*, at a moment when Bennett and Bryant, Greeley and Raymond were approaching the end of their careers, leaving no successors. He was not a great editor in the sense of being an organizer or manager. The *Nation* was avowedly patterned after the London *Spectator;* the *Evening Post* was already in its ninth decade when Mr. Godkin joined Messrs. Carl Schurz and Horace White in assuming editorial direction of it. He had, strictly speaking, no business instinct, no faculty for details, nor any liking for the task of coördinating the departments of a daily newspaper. He was *par excellence* a leader-writer, with an astonishing productiveness, and a freshness in handling old themes which won even the hardened proof-reader's admiration. The prospectus of the *Nation* laid stress upon the advantages of a weekly over a daily newspaper in respect of leisure for ascertainment of the facts and deliberation in comment; and the argument was as incontrovertible in 1881, when Mr. Godkin became one of the editors of the *Evening Post*, as it was in 1865. The change might not have come about had the *Nation* prospered so as to warrant an enlargement of its staff. The strain of writing from three to five pages for it weekly was felt at last to be too severe as well as too unremunerative, in view of the scrutiny to which Mr. Godkin was subjected while all but single-handed.

Apart from the resultant greater conspicuity, the merging of the weekly editor in the daily was not a promotion, for the *Nation* had already placed him in the front rank of American journalists even during the lifetime of the veterans we have mentioned. It was a familiar flattery to have his articles made over at a safe interval in a metropolitan daily; and in the country at large the practice was still more common. The *Nation* was eagerly read in every newspaper office of importance, and its ideas filtered down without acknowledgment through a thousand channels. On the other hand, in his new position, Mr. Godkin became inevitably a greater target for censure and abuse; the more because a New York daily must needs come to closer quarters with local corruption and misrule, and its editor be more exposed to pay with his person for incurring the wrath of organized iniquity. This Mr. Godkin did in his memorable campaign against Tammany.

Few journalists have labored less whose writing was of as high a quality as Mr. Godkin's. His pen was fluent and ready, but his diction never careless; rather it bore at all times the marks of training and culture of a high order. While able to develop a subject at any length, he had extraordinary aptitude for paragraph writing; his touch in either case was always light, his matter always pithy. His expression was very direct, vigorous, and trenchant; and he had

an exceptional gift for descriptive narration. His style, indeed, was adequate for every use to which he applied it, and passed without effort from the journalistic to the literary vein, treating nothing that it did not adorn. Such adaptability is seldom encountered, and perhaps the nearest parallel to his is to be found in the writings of Harriet Martineau, long an editorial contributor to the *Daily News*. Mr. Godkin's humor, which

"was ever
Lance and sword to him, and buckler and helmet,"

perplexed the simple-minded, while it enraged his enemies. Its droll visualizing quality lightened every page that he wrote for the *Nation*. On this side he has never been surpassed, if approached, and the effectiveness of his humor as a political weapon consisted in the freedom with which he directed it against the objects of a sham popular and partisan reverence. He owed this freedom, undeniably, to the foreign birth with which he was constantly reproached; but it was his humor which first pierced the glamour and enabled him to see men and policies in a dry light. Biting as it might be, it was never cynical. His conversation was naturally playful and seasoned with a hearty laughter, and his daily companionship most delightful.

As no American could have written Bryce's 'American Commonwealth' or Goldwin Smith's 'History of the United States,' so it may be doubted if any native of this country could have erected the standard of political independence which Mr. Godkin set up in the *Nation* and maintained in the *Evening Post*. He did this, however, not as a foreigner, but as an American to the core. A utilitarian of the school of Bentham, an economist of the school of John Stuart Mill, an English Liberal to whom America, with all its flagrant inconsistency of slaveholding, was still the hope of universal democracy, he cast in his lot with us, became a naturalized citizen, took an American wife—gave every pledge to the land of his adoption except that of being a servile follower of party. He brought to his high calling sound principles of finance, with which he fought the good fight of honest money, specie payments, and currency reform; of political economy, with which he combated protection and its attendant corruption; of popular government, which stood by him in the removal of the Reconstruction scandal; of office as a public trust, which made his journal the most potent medium for the promotion of civil-service reform and the exposure of machine and boss government. Nowhere is there such a body of useful doctrine for serious-minded youth seeking to fit themselves to be "perfect citizens" (as was said of the late John M. Forbes) as the files of the *Nation* contain during Mr. Godkin's thirty-five years' connection with it. Nowhere can the historically-minded man more profitably turn for light upon our latter-day decadence.

Many volumes of speeches are compiled, but few are read long after their publication, and the same oblivion more certainly overtakes the political editor's monument. His contention is for the hour; his triumph is in his shaping of passing events. Those, however, whom curiosity or study leads to examine the writings of Mr. Godkin, will find them distinguished by a philosophic cast not unknown to American oratory before the war, but so ominously wanting in the legislative debates of the past two decades. It may be that Mr. Godkin will be currently quoted hereafter no more than Greeley, but not for the same reason. His text abounds in broad general sentiments and reflections such as find corroboration wherever "history repeats itself," and which in fact have in them the essence of prophecy. The number of fortunate predictions, both generic and specific, was truly notable in Mr. Godkin's case.

His judgment, as was proper in one whose function was criticism, was as rare a faculty as any that he possessed. Applied to public characters, it was almost unerring; and to measures, seldom at fault. To say that it was wholly unaffected by the heat of controversy, or was free from occasional excess or unfairness, would be an unnatural claim. But time itself has already approved the more significant estimates placed by him upon the men of his day; and where the legend is more lenient, it will be found that the popular memory is defective. The application of his judgment to causes was, it is needless to remark, purely ethical, and divorced from considerations of the winning or the losing side. *Sed victa Catoni* was honor enough for him. Yet when one enumerates all the crazes past, all the dangers averted, and all the advances won in the struggle for good government on this continent, Mr. Godkin's mental balance is clearly apparent to those who remember his attitude towards each. And if we extend our consideration to foreign affairs, we can but admire his treatment of them in former years, when he followed them more closely and "saw what he foresaw." In this department his superiority was preëminent. In domestic affairs his judgment reposed on faith in the American character and in the ultimate sanity of democracy. If it was often disappointed, it was often gloriously vindicated.

There was occasion enough for melancholy in retrospect. Specific reforms with a definite aim in view attainable by legislation may reach a happy conclusion. Such was the fate of the anti-slavery agitation, and those who began it lived to see the fruit thereof. Their active labors lasted, including the civil war, but thirty-five years—little more than a generation. For precisely the same term Mr. Godkin strove—above all—to create a spirit of independence of party and to abolish the spoils system of government. The task was more difficult than the destruction of slavery. He witnessed a beginning of civil-service reform in the national domain and in one or two States; yet witnessed a ceaseless attack upon it in all, an evasion of it where possible, a betrayal of it by a President committed to the support of it—amid the general apathy of the people at large. He saw, at the Presidential election of 1896, party ascendency secured by pledges, made to be broken, which for the moment confounded party lines. He saw the Democratic party manifest at one time a miraculous power of self-regeneration, only to sink back into the deepest of its abysses; the Republican party all the while stolidly implacable towards its come-outers for conscience' sake. Worse yet, he saw public men of both parties involved in a repudiation of the fundamental maxims of our republican experiment, and the conversion of a self-contained, peaceful, industrious democracy into an earth-hungry belligerent, seeking points of hostile contact with the most warlike monarchies.

"He grew old in an age he condemned,
Felt the dissolving throes
Of a social order he loved,
And, like the Theban seer,
Died in his enemies' day."

It testifies to the fibre of a moralist whom the infirmity of age was consciously drawing from the scene, that he was neither soured nor dejected by such a prospect. It was in Mr. Godkin's mind to strive to the end. His formal retirement, however, from the *Evening Post* was none too soon for his failing strength of body. Though he recovered, beyond all expectations, from an apoplectic stroke incurred on February 4, 1900, and continued to write at intervals for this journal during another twelvemonth, he could not complete the revision of his Reminiscences, for which many publishers had besought him, and we shall never have his own summing up of his life-work—wherein it satisfied him to remember, where haply it fell short in method, manner, or temper, what title it gave him to good fame and lasting human gratitude. Some who first heard his trumpet-call and have had their spiritual natures determined by his lofty and disinterested teaching—call it preaching, if you will, and his press a religious press—have recently publicly confessed their indebtedness. More will be moved to do so now; and more still, alas!—a multitude—will never know what benefaction they have received from his hand, who moulded for good the generation from which they sprung.

CARMONTELLE'S PORTRAITS.

PARIS, May 7, 1902.

A new volume has been added to the magnificent catalogue of the works of art of the Musée Condé at Chantilly. The two first volumes contained a full description, with many admirable photo-engravings, of the pictures of Chantilly; the third volume was entirely filled with reproductions and descriptions of the famous "Horæ" of the Duke de Berry. M. Gruyer, the curator of the artistic department of the Chantilly collections, now gives a sequel to his great work in a volume entirely dedicated to the portraits of Carmontelle.

Carmontelle's name is not much known out of France, or even in France beyond a small circle of amateurs. M. Gruyer's volume opens with a very interesting biography of this portrait-painter. Carmontelle did not begin life as a painter; he had literary pretensions. He composed, under the name of "Proverbes," society plays which generally ended with a proverb. Grimm says of him in his correspondence: "Our friend Carmontelle furnishes plays as a pastry-cook furnishes cakes; the moral character of a proverb furnishes a theme for theatrical action which is represented at once as an impromptu. It is for the spectator to find the proverb at the end of the play." Madame de Genlis took the trouble to write a notice of the 'Proverbes' on their publication in three volumes.

Carmontelle was the manager of his own little plays, designed the costumes, made the decorations. He was thus led to make rapid portraits of the actors, and nature had given him an extraordinary faculty of obtaining a perfect likeness. He had

not the education of an artist; he rarely paints his actors otherwise than in profile, but his profiles have the undeniable character of life. His color (he painted in water-color) is extremely agreeable, and his portraits are real historical documents. Grimm wrote, on the 1st of May, 1763, in a letter:

"M. de Carmontelle has for several years made a series of portraits in water-color. He has a singular talent for catching the air, the attitude, the character of a face. It happens to me every day to recognize in the world people whom I have seen only in these collections. These portraits he makes in a couple of hours with surprising rapidity. Carmontelle has thus succeeded in taking the portraits of all the ladies in Paris, with their consent. His collections, which he increases every day, give also an idea of the variety of conditions of men and women of all ranks, from the Dauphin to the *frotteur* of Saint-Cloud.

M. de Carmontelle was born on the 15th of August, 1717. His real name was Louis Carrogis. His father was a shoemaker. We know nothing of his education or of his early years. He was thirty-nine years old at the beginning of the Seven Years' War; and M. de Pons-Saint-Maurice, the governor of the Duke de Chartres, who was in command of the regiment of Orléans Dragoons, took him with him to Westphalia. There is in the library at Chantilly a manuscript, written by a certain Chevalier de Lédans, in which we may read: "Carmontelle's whole military merit consisted in drawing plans with the greatest perfection, in carving very dexterously his general's fowl, and in making caricatures of all the *dragonaille* of the army." After the war, thanks to the protection of M. de Pons, he was admitted into the household of the Duke d'Orléans (the grandfather of King Louis-Philippe), as reader to the Duke de Chartres. "This function," says Madame de Genlis, "though honorable, was rather inferior, as it did not give him the right to take his meals with the princes, even in the country; but M. Carmontelle was soon particularly noticed, not only by the Prince, but by all the amiable and clever people who used to go to Villers-Cotterets [countryplace of the Orléans family]. He had much information, much reserve without embarrassment, an amiable gayety." Carmontelle amused the society at Villers-Cotterets with his "Proverbes." He was an excellent actor. He was allowed every evening to join the general circle, and to take ices with the Prince and the members of his court. He made portraits of all the visitors, and often gave them copies, but kept the originals for his own collection.

The Duke d'Orléans, whom he served for twenty-five years, died in 1785, but he remained in the service of the Duke de Chartres, who became Duke d'Orléans in his turn. The history of the new Duke is well known; he threw himself into the Revolutionary movement and became Philippe-Égalité, but could not avoid the guillotine. Carmontelle was ignored during the Revolutionary crisis. He had no enemies; he was allowed to end his life in obscurity, and he died in Paris on the 26th of December, 1806, at the age of eighty-nine. After his death, there was a sale of his pictures. We read in the catalogue of this sale: "There is an interesting item in M. de Carmontelle's productions, namely, his collection of 750 princes and seigneurs, princesses and titled ladies, ministers, soldiers, lawyers, ecclesiastics, scientific men, and illustrious personages of the reign of Louis XV., colored *à la gouache* from nature, on a scale of eight by nine inches." The Government did not buy this collection, and it was bought by the Chevalier Richard de Lédans, a retired officer, who had been a friend of Carmontelle and of many of the personages of the collection. He had to borrow money for his purchase. He hoped to sell the whole collection to Talleyrand, but his offers were refused, and he was obliged to sell the collection piecemeal to various families. After this amputation, there remained in his hands 635 portraits, which he classified in thirteen parts.

The Chevalier de Lédans died in 1816. At his sale, all these portraits were bought by M. de la Mésangère. La Mésangère, born at Baugé on the 23d of June, 1741, was ordained a priest, and became a professor of literature at La Flèche. In 1799 he became the editor of the *Journal des Dames et des Modes*. This journal had many colored illustrations, and is still valued on their account by bibliophilists. La Mésangère took good care of Carmontelle's portraits. He had them mounted in passepartout, their present condition, and, with the aid of the notes left by Lédans, he inscribed under them the names of the various personages. La Mésangère died in Paris on the 25th of February, 1831. Number 304 of the catalogue of his sale bears this mention: "A collection consisting of five hundred and twenty portraits drawn and colored by Carmontelle. They represent all the family of the ancient house of Orléans, the persons attached to that house, the gentlemen of that time, etc." They were bought in by the Duff-Gordon Duffs, and were kept in their family. They left Scotland in 1877 for Chantilly. The Duke d'Aumale bought them from Major Lachlan Duff-Gordon Duff of Drummuir, Keith, for the sum of £4,500, through Colnaghi in London. The Duke d'Aumale was already in possession of a few of Carmontelle's portraits which he had bought on various occasions. He added them to those which had been so long in Scotland. The whole series, 480 in number, is now kept in ten great volumes carefully bound. M. Gruyer justly says that in these volumes the eighteenth century lives again, in its second half, "with all its elegances and with some of its trivialities."

It was not an easy task to describe this collection. M. Gruyer had to make a classification. There is, in his work, a succession of groups, forming as many chapters. First come the princes and princesses of the royal house of France; the Dauphin, son of Louis XV.; the Duke d'Orléans, the Duke and Duchess of Chartres, the Prince de Condé; Mademoiselle, sister of Louise Philippe, the first of that name; Duke d'Orléans, grandfather of King Louis-Philippe; the Duke de Penthièvre, the Princess de Lamballe, etc. Next in order come the princes and princesses of foreign sovereign houses, among whom are to be noticed the princesses of Hesse-Darmstadt, who were particular favorites of Queen Marie Antoinette. As Carmontelle belonged to the household of the Duke d'Orléans, he took most of his models from this household, not only among the gentlemen and ladies, but also among the most humble followers of the little court of the Palais-Royal, of Saint-Cloud, and of Villers-Cotterets. Among the ladies, we may cite the Countess of Polignac, the Marchioness du Crest, the handsome Madame de Séran, who was much admired by Louis XV., but whose reputation almost remained unimpeachable. Carmontelle did not forget the military friends whom he had made in the campaign in Westphalia, and we find them all in his collection, along with some distinguished men whom he knew afterwards. But the most brilliant part of the collection consists of the portraits of the great ladies of the time, some of whom had a great reputation for beauty, such as the Duchess of Chevreuse, the Countess of Egmont, the Countess of Boufflers, etc. Certain others were victims of the Revolution, and won admiration by their heroic death, such as the Duchess de Gramont, the Duchess de Lauzun, the Marchioness du Plessis-Bellièvre.

I cannot cite here the names of all the personages whose physiognomies Carmontelle preserved for us—diplomats, churchmen, philosophers, men of letters, musicians, actors and actresses, financiers. M. Gruyer has added notes to his description of the portraits which are very detailed, and give real historical value to his magnificent work.

Correspondence.

OUTLINE CATALOGUE OF EARLY PAINTINGS.

To the Editor of The Nation:

Sir: Referring to the very interesting article "A Library of Art Reproductions" (*Nation*, April 24, p. 321), I beg leave to state in your columns that I have been engaged for some time in preparing an illustrated index of ancient pictures ('Corpus Picturarum Concilio Tridentino Antiquiorum'). The first quarto volume, containing 2,000 outlines, chiefly from little-known paintings, and costing only 12 francs ($2.40), is to appear in 1903. Although possessing much available material, I should be greatly obliged for the *loan* of good photographs from ancient paintings in American museums and private collections, and would return them, duly registered, to the owners, less than three weeks after reception. Paintings later than 1550 do not fall within the scope of my present work.

Faithfully yours, Salomon Reinach.

Musée de Saint Germain-en-Laye, May 6, 1902.

FOGG MUSEUM ART PHOTOGRAPHS.

To the Editor of The Nation:

Sir: In connection with your article of April 24, entitled "A Reference Library of Art Reproductions," and the communication of your issue of May 8 on the same subject, it seems worth while to call the attention of your readers to the collection of photographs of works of art which forms, perhaps, the most important part of the equipment of the Fogg Museum of Art at Harvard University, inasmuch as this collection offers an opportunity for the systematic comparative study of the history and principles of art, of which the public appears not yet fully aware. It was begun in the year 1895, and was, I believe, the first extended collection brought together for this purpose. It has, moreover, served as a model for others formed since that

time, such as the one in the Boston Public Library. There are embraced in this illustrations of works of art of all periods and of all countries, and it already numbers over 30,000 photographs, which are freely accessible, not only to students of Harvard University, but also to the general public. They are arranged in the cases according to periods and countries, with subdivisions into painting, sculpture, and architecture, and are carefully cross-catalogued according to periods, artists, places, and subjects; so that a complete series of the available photographs illustrating any phase of the development of the fine arts which a student may wish to examine, may be had at a moment's notice.

That such an opportunity exists for practically first-hand (photographs are authentic so far as they go) study of great works of art, ought, I think, to be more widely known.—Very truly yours,

ARTHUR POPE.

CAMBRIDGE, MASS., May 13, 1902.

MILTON'S IAMBIC TRIMETER.

TO THE EDITOR OF THE NATION:

SIR: Your reviewer of Mr. Bridges's book on Prosody seems to think that Milton's use of the iambic trimeter, or alexandrine without the medial cæsura, in place of the ordinary alexandrine, was an innovation or experiment. It was common enough long before Milton's time. In the first canto of the 'Faerie Queene' there are eight alexandrines like this:

"Upon his foe a dragon horrible and stearne,"

or, with the diiambus:

"That soone to loose her wicked bands did her constraine."

There are others where the natural pause and the diæresis disagree, as—

"The fearfulle dwarfe; 'This is no place for living men' '';

which also has the diiambic structure.

In fact, the free handling of the alexandrine goes very far back. In the 'Poema Morale' (about 1200), which consists of mixed alexandrines and fourteeners, we find such lines as

"Werse he doth his gode wines than his fiendes—
And al tho the aniwise deuel iquemde'';

which are ditrochaic.

WM. HAND BROWNE.

[Our review said: "It might be conceivable that Milton wrote this kind of line unconsciously, as a spontaneous variant on the alexandrine, having hit it off by ear and repeating it from unreflecting liking for it."

Any poet writing free alexandrines (Spenser, for instance, as Dr. Browne points out) would naturally be prone so to form such a variant occasionally—likely to do so often. Many before Milton and more since have made such lines. This the reviewer assumed as obvious.

The point about Mr. Bridges's presentation of his scrutiny of Milton's verse is his apparent claim (page 39, as quoted in the review, and the word "always" page 40, line 4) that most of Milton's twelve-syllable verses are of this cast. There is much difference between writing numerous free alexandrines, many of which run into this variant, and creating twelve-syllable lines a noticeable proportion of which are apparent accentual iambic trimeters. Mr. Bridges seems to imply that he has found something like this in Milton.

To settle this matter it would be necessary to scan each of Milton's twelve-syllable lines and ascertain in what proportion of all are those of the iambic-trimeter form; to make a similar study of the alexandrines of a long series of English poets, from early times to the present; and to compare the average proportion with that found for Milton. Without making such an investigation, and accepting Mr. Bridges's statements as they stand, it seems to us not unlikely that Milton may have been more influenced by his classical studies than by English tradition.—ED. NATION.]

A BRITISH ACADEMY.

TO THE EDITOR OF THE NATION:

SIR: A reference to an early "British Academy" is to be found in a letter from John Evelyn to Sir Peter Wyche, written in 1665. In that year, Wyche, whose diversified talents had won him a reputation as diplomat, geographical writer, and linguist, was appointed, by the Royal Society, chairman of a committee to consider the improvement of the English tongue, and on this occasion Evelyn addressed him, at some length and, we infer, by request, upon the subject; prefacing his remarks with the regret that, to his "owne misfortune" and "greate infelicity," he should be prevented, by public duties, from attending the meetings of the Society on Tuesday afternoons.

Evelyn, in his letter, finds the changes in the English tongue to have been brought about through the following causes: "Victories, Plantations, Frontieres, Staples of Com'erce, Pedantry of Schooles, Affectation of Travellers, Translations, Fancy and style of Court, Vernility & mincing of Citizens, Pupils, Political Remonstrances, Theatres, Shopps, &c."; and he essays the difficult task of reform in the twelve following propositions:

1. I would therefore humbly propose that there might first be compil'd a Gram'ar for the Præcepts; which . . . might onely insist on the Rules, the sole meanes to render it a learned & learnable tongue.

2. That with this a more certaine Orthoggraphy were introduc'd, as by leaving out superfluous letters, &c.: such as *o* in Woomen, People; *u* in Honour . . . &c.

3. That there might be invented some new Periods and Accents, besides such as our Gram'arians & Critics use, to assist, inspirit, and modifie the Pronunciation of Sentences. . . .

4. To this might follow a Lexicon or Collection of all the pure English-Words by themselves; then those which are derivative . . . then, the symbolical; so as no innovation might be us'd or favour'd; at least till there should arise some necessity of providing a new Edition, & of amplifying the old upon mature advice.

5. That in order to this, some one were appointed to collect all the technical Words. . . .

6. That things difficult to be translated or express'd . . . were better interpreted than as yet we find them in Dictionaries. . . .

7. That a full Catalogue of exotic Words, such as are daily minted by our *Logodœdali*, were exhibited. . . .

8. Previous to this it would be enquir'd what particular Dialects, Idiomes, and Proverbs were in use in every several Country of England, for the Words of the present age being properly the *Vernacula*, or Classic rather, special reguard is to be had of them.

9. And happly it were not amiss, that we had a Collection of the most quaint and Courtly expressions, by way of *Florilegium*. . . .

10. And since there is likewise a manifest rotation and circling of Words, which goe in and out like the mode and fashion; Bookes would be consulted for the reduction of some of the old layd-aside words and expressions had formerly *in deliciis*. . . .

11. Something might likewise be well translated out of the best Orators & Poets, Greek and Latin, and even out of the Moderne Languages. . . .

12. Finaly. *There must be a stock of reputation gain'd by some publiq writings and compositions of the Members of this Assembly, so that others may not thinke it dishonor to come under the test, or accept them for judges and approbators; And if the designe were arriv'd thus far, I conceive a very small matter would dispatch the art of Rhetoric, which the French propos'd as one of the first things they reco'mended to their late Academitians.*

Very truly yours,

HENRIETTA R. PALMER.

PROVIDENCE, May 15, 1902.

"AMERICA."

TO THE EDITOR OF THE NATION:

SIR: As somewhat germane to the citations which Mr. Albert Matthews adduces and publishes in your issue of May 1, to show the phases through which the term "The States," as applied to our country, has gone, permit me to mention a curious custom prevailing in Nantucket, at least among the older natives of that island. They speak of the continental portion of the United States as America. When there I was told that on a fair day one could see America; that, consequent upon the decadence of the whale fishery and the loss thereby of population, many vacant houses had been placed on gundalows and towed over to America; and taking the steamer for Hyannis was quite generally spoken of as going to America. Perhaps this custom arose from the prudent neutrality of the islanders during the Revolutionary war. JOHN JAMESON.

WOBURN, MASS., May 14, 1902.

SHAKSPERE'S DESCRIPTION OF THE TORTURE BY WATER.

TO THE EDITOR OF THE NATION:

SIR: Shakspere gives a very adequate description of the sensations which must be experienced by a victim of the water torture, in "King Richard the Third," Act I., Scene III:

Clarence. "As we pac'd along
Upon the giddy footing of the hatches,
Methought that Gloucester stumbled; and, in falling,
Struck me, that thought to stay him, over-board,
Into the tumbling billows of the main.
O Lord! methought what pain it was to drown!
What dreadful noise of water in mine ears!
What sights of ugly death within mine eyes!
. . . . . .
. . . and often did I strive
To yield the ghost; but still the envious flood
Stopt in my soul, and would not let it forth
To find the empty, vast, and wandering air;
But smothered it within my panting bulk,
Which almost burst to belch it to the sea."

Yours truly,

BERTRAND SHADWELL.

CHICAGO, May 18, 1902.

RATLINGS IDENTIFIED.

TO THE EDITOR OF THE NATION:

SIR: Referring to my note in the *Nation*

of March 27, and in *Notes and Queries* of April 12 anent the word *ratlings* (*rattlings*), a writer in *Notes and Queries* for May 3 gives what seems to be the origin of this obscure word; he identifies it with *raddlings*, a term still in common use in Somerset, England (cp. 'West Somerset Word-Book,' p. 609). The verb *raddle* means to interweave rough brushwood; for instance, a hedge made with roughly interwoven untrimmed sticks, he says, is *raddled*, and the material which would otherwise go for kindling and be tied up in bundles is, when so used, called *raddling*. *Raddles* are small wood or sticks split like laths; whence *ratlings* meaning 'kindling.'

CHARLES BUNDY WILSON.

IOWA CITY, IOWA, May 16, 1902.

Notes.

Houghton, Mifflin & Co. are about to publish 'Reminiscences of a Dramatic Critic,' by Henry Austin Clapp; 'Lee at Appomattox, and Other Papers,' by Charles Francis Adams; 'Charles Eliot, Landscape Architect'; 'The Literature of American History,' edited by J. N. Larned (an expert judgment of all books on this subject); 'Poems of Edward Rowland Sill,' in a limited edition; a Life of Longfellow, in the American Men of Letters Series, by T. W. Higginson; 'September Days on Nantucket,' by William Root Bliss; 'The Desert and the Sown,' by Mary Hallock Foote; and Fielding's 'Journal of a Voyage to Lisbon.'

A. C. McClurg & Co., Chicago, are preparing a novel sort of "Familiar Quotations," namely, 'An Index to Recitations, Readings, and Dialogues,' by title, author, and first lines. The volume may prove considerable in bulk—some 800 pages.

"Our Annual Execution," "a forgotten essay by William Makepeace Thackeray," from *Fraser's Magazine*, together with a critical review from the same periodical, "A Word on the Animals," will be published by H. W. Fisher & Co., Philadelphia, who call in the Merrymount Press for a limited edition.

Ferris & Leach, Philadelphia, will bring out directly 'In Quest of the Quaint' (in Canada), by Miss Eliza B. Chase, and a list of 'Quaker Arrivals in Philadelphia, 1682-1750,' compiled from the records of Philadelphia Monthly Meeting of Friends by Albert Cook Myers.

A. S. Barnes & Co. have nearly ready 'Home Thoughts, Second Series.'

Additional announcements from John Lane are 'An English Girl in Paris' and 'In a Tuscan Garden.'

All who have learned anything of the life of St. Francis are in a degree Franciscans, so that Montgomery Carmichael's 'The Lady Poverty, a XIII. Century Allegory,' should not lack readers. The book is a translation of the Franciscan tract the 'Sacrum Commercium,' "an allegory simple in form and charming in conception, telling how St. Francis wooed and won that most difficult of all Brides, my Lady Poverty." The little book is daintily made by John Murray (New York: Tennant & Ward), contains notes on the history and transmission of the text, a chapter on the "Significance of Spiritual Poverty," by Father Cuthbert, and, as frontispiece, an excellent reproduction of Giotto's great allegorical painting at Assisi—"The Espousals of St. Francis to the Lady Poverty."

The De La More Press of London sends us a very handsomely printed small quarto volume entitled, 'Siena: Its Architecture and Art.' The author, Gilbert Hastings, offers no preface to his little work, but begins at once with an introduction of thirteen pages, dealing in a general way with the relations of Siena to the art world of Italy, with a few words of sympathetic description of the city itself and its remarkable, even unparalleled, topographical position on a "series of ridges all radiating from the central Castelvecchio," with "all the buildings of importance . . . situated along the crests of these ridges and round their meeting-point." The division of the book proper is, then, simply enough, into two chapters, one of which has the title "Architecture" and is illustrated by seven photographs of well-known buildings of the Middle Ages and the Renaissance with their details, while the other, chapter iii., has the oddly exclusive title "Art," and is devoted to painting alone, and illustrated by six photographic illustrations. This nomenclature reminds one of the curious old fashion prevalent in our American cities twenty years ago, but which we had supposed was abandoned even there—the odd way of speaking of the artist as if he were always a painter, and of the painter, portraitist or landscapist, as if he alone were the artist. A brief bibliography is added by Mr. Hastings, and there is an index which occupies two pages and may prove to be sufficiently full for this very small but interesting and sympathetic treatise.

That very successful writer of brief astronomical monographs in understandable form, Mr. W. T. Lynn, formerly of the staff of the Royal Observatory at Greenwich, has just issued the tenth edition revised of his 'Remarkable Comets,' being a survey of the most interesting facts in the history of cometary astronomy (London: Sampson Low, Marston & Company). It is simply a handy work of reference to comets that may be considered remarkable either for their brilliant appearance, their periodic returns, or for any other circumstance respecting them. Of comets due the present year, none are expected to be sensational in their advent. One was originally discovered by the late M. Tempel at Marseilles in 1869, and rediscovered at its second subsequent return in 1880 by Swift, then of Rochester, whose name the comet has ever since carried. It is a shy body, having dodged the comet-hunters at half its returns, but there is hope of its being caught again this coming autumn. Another comet due this year, though unfavorably circumstanced for observation, is one long known as Lexell's lost comet, which Mr. Lynn characterizes as "a truly unfortunate body from the way in which its motions were disturbed by the giant planet Jupiter." Messier at Paris first discovered it in 1770. Its orbit was elliptical with a period of about five and a half years, but the powerful attraction of this planet has since completely changed its path into one of seven years' duration.

The Bibliophile Society of Boston has issued two volumes out of nine in an edition of the Odes and Epodes of Horace, edited by its own members, and sumptuously printed at the Riverside Press in Cambridge. Mr. Howard Pyle has furnished the embellishment; Prof. Clement Lawrence Smith has edited and annotated the text. Translations face the original; some from the pens of members. One volume will be occupied with bibliography alone, and will be illustrated by facsimile reproductions from the British Museum MS., the *editio princeps* and other early editions. We might dwell on this undertaking, which is a labor of love, but the limited edition is, with a few exceptions, procurable only by members of the Society. One set is to be auctioned off here and another in Boston.

The 'Selected Essays and Addresses' by Sir James Paget, edited by Stephen Paget (Longmans), form a fitting supplement to the Life of Paget noticed in these columns last month, and sustain the opinion there expressed as to the broad intelligence of the writer; his wholesome sanity of thought and judgment; his simple, lucid, and effective style. It is unnecessary to discuss the various papers at length, inasmuch as they are mainly republications of medical articles, and addresses delivered many years ago. Some of them are quite technical, but all are of lasting value. Those of greatest general interest are the Hunterian Oration of 1877; "The History of the Discovery of Anæsthetics," 1879; "Theology and Science," 1880; "The Contrast of Temperance with Abstinence," 1881; "National Health and National Work," 1884; "Errors in the Chronometry of Life," 1891; and "The Use of the Will for Health," 1891. The appreciative account of John Hunter, with whose aims and methods Paget was bound to be a sympathizer, gives an impressive picture of a wonderful character. The essays on "Animal Experimentation," on "Theology and Science" and "National Health and National Work" are liberal and intelligent in motive and instructive in detail. A short essay on "The Use of the Will for Health" is a lay sermon of wide application, and reflects the energy and fine purpose of its author. Another essay, on "Elemental Pathology," deals with diseases of plants, and while it describes little that is strictly new, the application to clinical pathology is valuable and suggestive.

Recently the firm of Julius Groos of Heidelberg (New York: Brentano's) has added to its well-known series of conversation grammars several dealing with Oriental languages. That especially of the modern book-Arabic by Harder was a real contribution to Semitic linguistics. The last to appear is a modern Persian grammar by W. St. Clair-Tisdall, which, if not so scientific and thorough as Harder, can yet be very fairly commended. It is strictly of modern Persian, colloquial and written, has an adequate collection of exercises, eighty pages of neatly lithographed reading-book, a full English-Persian vocabulary, and over twenty pages of lithographed Persian letters. There is no other book at all like it, and, within its limits, it should prove most useful. Mr. St. Clair-Tisdall's knowledge of Persian is undoubted. Over his Persian book on the sources of Islam, it may be remembered, there was an interesting tilt in the *Nineteenth Century* rather more than a year ago between Sir William Muir and Moulvie Rafiüddin Ahmad.

From Brentano's, also (still by way of Heidelberg), we receive a 'Portuguese Conversation-Grammar' by G. L. Kordgien and

E. Kunow. It is one of a series composed on the Gaspey-Otto-Sauer method, which is not markedly distinguished from many another. Those who must depend upon themselves for instruction in a language easy to read but difficult to speak and to pronounce, will find this manual adequate within the capacity of such helps. Some reading exercises are appended, and an English-Portuguese vocabulary. The inside of the covers has been utilized for maps showing the domain of spoken Portuguese, in Europe, Asia, Africa, and South America—the most considerable remains of former "sea-power," and a by-product of it that must appear relatively contemptible to Capt. Mahan and his disciples.

Alfieri & Lacroix, Milan, are issuing the "Divina Commedia" in a sort of double post-card series (ten to an envelope when not folded), engrossed in monkish fashion, with rubricated initials and illuminated design for each canto. The idea is Attilio Razzolini's, and it has been beautifully carried out; but the close-packed lines in hair-line letter forbid continuous reading.

The historical manuscripts of the May Bulletin of the Boston Public Library refer mainly to the Jackson-Adams campaign of 1828, the most interesting being one from Henry Clay, written after the election. He regards the result as adverse "to the cause of human freedom," and is unable to view it "under any aspect whatever without awful apprehensions. Still, we have yet our liberty. And it should be our aim, by the exertion of all our energies, to preserve it, and to destroy the pernicious influence of the example which a majority of our countrymen have passionately and thoughtlessly established. For myself I desire life no longer than I possess liberty." George M. Dallas, on the other hand, writing in August, 1828, is confident that Jackson will succeed because "our democrats—and with them at least one-fifth of the federalists—are convinced that corruption was at work in the election of Mr. Adams, and nothing would bribe them to endure it." He refers to the perfect organization of the Federal party in Pennsylvania, and asserts that "it is the nature of our's to submit to very little organization, but to accomplish a great deal, apparently, through the exercise of individual and independent effort."

The Quarterly Statement for April of the Palestine Exploration Fund contains a contribution to the controverted question of Golgotha and the Holy Sepulchre by Sir C. W. Wilson. His conclusion is that the name is derived from a "local legend which connected it with a skull, possibly that of Adam, as all the early Christian Fathers who mention the subject assert," and that the theories which identify "the place of a skull" with a public place of execution, or with a spot which resembled a skull, "are of later growth and probably of Western origin." Col. C. R. Conder treats of the Hebrew weights and measures, and there are the usual reports on excavations and inscriptions, and some observations on the seasonal and annual variations in the level of the Dead Sea. Attention is called to the rifling of tombs and ransacking of ancient mounds near Hebron by the fellahin, with such deplorable results that the whole district has been archæologically ruined. There are indications that this evil is spreading.

The Dûsuns, a forest people of North Borneo, as described in the *Spectator* by Mr. Hugh Clifford, the late Governor of that territory, furnish a most perplexing enigma for anthropological science to solve. Downtrodden for ages, they have that "peculiar expression, at once patient, fearful, and utterly despondent, which belongs to the lost races," and in habits and manner are nearly at the lowest level of humanity. At enmity with all men, they kill for the mere love of bloodshed, and the roof-trees of their cubicles "fairly groan under their loads of dried human skulls." "It is curious," remarks Mr. Clifford in this connection, "that Borneo, which, for a tropical country, is singularly free from the more savage of the beasts, should produce more men instinct with this wanton homicidal mania than any other place of its size in the world." Yet, though hopelessly and irredeemably a savage, the Dûsun speaks a language which, in its inflections, declensions, and conjugations, its elaborate system of prefixes and suffixes, bears marks of a refined and fastidious civilization. And he has successfully resisted the persistent efforts of his Malay master to turn him from his own religious belief to the faith of Islam. A single article only of his creed, his theory of the creation, is given, but this shows thought far deeper than that of any barbarian. It is a most interesting contribution to mythology, and agrees with the Bible in attributing the origin of evil to a woman. Moved by jealousy, she created the world and rules it, and hence its grievous imperfections. "Wherefore among the Dûsuns women hold all sacerdotal offices even to this day, and, though the people pray to the great god Kinohringan, they know that all evil has its source in the goddess whose pride and untimely interference alone prevented the creation of the perfect world."

A recent number (Heft 4) of the *Monatsberichte über Kunstwissenschaft* (Munich) is an exceptionally rich one. A second article, in English, by Professor Huddilston, "The Life of Women Illustrated on Greek Pottery," is accompanied by two plates in terracotta and black. Several of the remaining twenty-three full-page illustrations are reproductions of paintings in private collections, among them an "Adoration," by Gerard David, and a very interesting work, until recently unknown, by Lorenzo Lotto, "The Portrait of a Goldsmith."

A recent number of the *Berlingske Tidende* of Copenhagen contains an account of a study, by Prof. Sophus Bugge, of a Norwegian runic inscription, which has a special interest for American readers. The stone containing the inscription was found in 1817, on a farm in Ringerike, Norway. Some years after its discovery, the stone disappeared, and has not since been found. Fortunately, the inscription was copied in 1823, and a copy of this drawing, the original drawing having also disappeared, is now in the Bergen Museum. The absence of the name, both of the person to whom the stone relates and of the cutter, seems to imply that the original inscription consisted of two parts, cut on different stones. Professor Bugge's Danish rendering may be translated as follows: "They came out [on the ocean] and across great stretches, and, needing clothes to dry themselves, and food, away towards Vinland and on the ice in the uninhabited region. Evil can take away joy, so that one dies early." This is clearly an epitaph over a young Norwegian from Ringerike, who had been wrecked with his companions, and, after wandering over the ice, had finally yielded up his life near the coast of Vinland. The character of the runes indicates that the epitaph was cut between 1010 and 1050—that is, within half a century of the discovery of the Western continent by the Norsemen. It is, therefore, the earliest document known to us containing a reference to America. The striking nature of Professor Bugge's conclusions has roused fresh interest in the search for the lost stone, which must be regarded as, from the cultural side, the most important in Scandinavia. Of even greater importance would be the discovery of the companion stone, if the theory with regard to its existence be correct.

The Russification of Finland now going on is believed by many to be only a preparatory step in the extension of the Czar's empire to the North Atlantic, and is to be followed by the subjugation of the northern provinces of the two Scandinavian kingdoms. The inhabitants of this region, Mr. Edmund Gosse says in a letter to the London *Times*, have long been keenly alive to this danger, and have guarded against it in a way characteristic of a brave people who love liberty. By an ancient privilege the men of the Norwegian provinces of Nordland and Finmark "were exempted, in consideration of the precarious nature of their business and the extreme poverty of the soil, from the duty of serving in the army." About eight years ago they requested the removal of this privilege, and now serve as soldiers, exactly as do their comrades in the south, and show remarkable eagerness in the discharge of their military duties. Their organization is already efficient, and they have drilling grounds for recruits, schools for non-commissioned officers, and annual manœuvres. Sweden also has provided an important defence for her threatened province by a fortified railway, by far the most northerly in the world, which runs from Victoriahavn, latitude 68°, on the Atlantic, through the iron ore districts in Sweden, almost to the Russo-Finnish frontier. Mr. Gosse asserts that the accusation that there exists a Russophile party in the public life of Norway is simply laughable, that "there is not a country in the world where the methods of Russian nationalization would be less likely to meet with partisans."

The decline in the popularity of the "stereoscopic view" since the days when Dr. Holmes was high-priest of the cult, would bear discussion by the expert. No doubt the strain of the lenses on the eye had something to do with it, and again the trouble of compact and orderly stowage of the views, with their varying sizes; then, in many kinds of pictures—as of foliage—the want of atmosphere, the exaggerated detachment and "solidity," with the effect of deadness which, in the case of portraiture, tended to become ghastly. But a better explanation is, no doubt, the manifold development of photography itself, enabling every individual in the community from childhood up to work his own camera. Be this as it may, an attempt is making to revive interest in the "stereograph." The

London and New York firm of Underwood & Underwood address themselves to the schools and to stay-at-home tourists in a very systematic manner, furnishing, say, a neat box of views in Switzerland, with a series of maps showing the point of view and scope of each numbered stereograph, and a book which is Cook's "personal conductor."

One such collection which they submit to us is devoted to President McKinley, exhibiting him in his Canton home, at the White House surrounded by his Cabinet, on his Southern tour, his Pacific Coast tour, and a great variety of public occasions down to the lamentable end. Each stereograph is apt to have some sentiment quoted at the foot from the speech illustrated. There is a book, bound in cloth, in which these incidents are described, and which closes with a general biography. It cannot be denied that all this is a "human document" more impressive than the kodak snapshot, more easy to study than the St. Vitus's dance of the kinematograph. The physiognomy of crowds is very instructively recorded; and here to perfection is set down that grab-bag handshaking from the rear platform which dispenses the Presidential car from being fitted with gymnastic apparatus as on the Siberian Railway.

—The authorship of Lord Durham's Report (of which a new edition has just been published by E. P. Dutton & Co.), though not surrounded by the mystery which enshrouds the Letters of Junius, is a difficult and interesting question. The intrinsic value of the document and the importance of its effect upon British colonial policy, give it a place among the classics of modern political literature. Its ideas are bold and positive; in form it is often animated and always forcible. Who, then, wrote this state paper which is of such quality that it would bring honor to any colonial governor or colonial secretary of the last hundred years? The old jest is as follows: "Wakefield thought it, Buller wrote it, Durham signed it." In Canada for a long time past it has been held to be the work of Charles Buller, though Sir Richard Hanson's statement to Greville that he and Wakefield wrote the paragraphs on Clergy Reserves and Crown Lands has not been overlooked. In England there has been a disposition of late to credit Lord Durham himself with a much more considerable share in the work than was accorded him by contemporaries. Then, too, Wakefield, who was by common consent the chief authority of those days on colonial questions, has always received credit for some of the most important ideas that the report contains. Partly by accident, partly by the prominence of colonial questions just now, the discussion of authorship has been renewed within the past few weeks on both sides of the water. It will be remembered that the names of Judge Dunkin, Mr. Turton, and Dr. Thom have recently been suggested by correspondents in our columns as those of probable collaborators, while Mr. Morgan of Ottawa has recalled how Joseph Howe and Sir John Macdonald ascribed this "Magna Charta of Canadian liberty and freedom" to Charles Buller. However, the most important article on the subject which has yet been published appears from the pen of Dr. Richard Garnett in the April number of the *English Historical Review*. The propositions here advanced are that the opening part, with one or two other passages, is by Lord Durham himself, that the entire middle portion is by Buller, and that some twenty-five pages towards the close are by Wakefield.

—With regard to the question of mutual sympathy between the three men, Dr. Garnett quotes with much force some words of J. S. Mill which occur in a letter to Sir William Molesworth. These were first published in 1901 by Mrs. Fawcett. "Buller and Wakefield appear to be acting as one man, speaking to Lord Durham with the utmost plainness, giving him the most courageous and judicious advice, which he receives both generously and wisely." Apart from Dr. Garnett's willingness to credit Lord Durham with the rhetorical parts of the report, the most interesting point in his article relates to the difference in view between Buller and Wakefield regarding one matter of the utmost moment. Here again Mrs. Fawcett's 'Life of Molesworth' is made tributary for a letter written by Wakefield from Quebec on September 29, 1838. "Buller has been true to his avowed principles. He has ever been the advocate of mercy and justice against policy. Not so I, who have had deeply impressed on me the opinion first suggested by you—that the Canadians were a miserable race, and that the country must be made English by one means or another." Buller wished to conciliate the French Canadians, leaving them still French and with the means of perpetuating their language. Wakefield thought that they should be Anglicized, and the part of the report which Dr. Garnett sets down to his share is a long section that may be termed a comment upon this view. We have said little about the Canadians who have been suggested as possible collaborators. In our opinion the element which they collectively represent is a negligible one. Judge Dunkin was a very able and distinguished man, but the report was written in England while he remained in Canada. Dr. Thom may have rendered assistance in some capacity, but we think it unlikely that he contributed anything material to the document as a whole.

—The second issue of the 'Architectural Annual' (Philadelphia, No. 931 Chestnut Street) reaches us in April, 1902, although bearing the date 1901. A letter from the editor, Albert Kelsey, gives the assurance that, although there was indeed some delay, yet there had been no intention of issuing the number dated 1901 until two or three months after the close of that year, it being the editor's purpose to review in each issue the progress of the year last preceding. There is some interest in comparing the frontispieces of volumes one and two, for each is a portrait and a record of an architect who may be taken as typical. It seemed odd when the first volume appeared with the motto on the cover, "Progress before Precedent" as the motto of the Architectural League of America, that the first portrait given should be that of an architect who more than almost any other stands for the opposite doctrine, for the doctrine of the supreme importance and value of tradition, and of the advisability of exact copying of the past rather than of any rash experimenting. The volume for 1901, however, gives as its frontispiece the portrait of the most daring innovator among all the architects of celebrity in the United States, and now it may be thought that the balance is even. The names of the architects in question are Charles Follen McKim and Louis Henry Sullivan. The contents of volume two could be appraised only by a minute examination of many subjects. There are three hundred pages, of which much more than half the aggregate space is occupied by illustration of a very general sort, including much that is very interesting, with no especial favor to designs which embody "progress before precedent." On the other hand, it was a good thought to give the Château d'Eau of Longchamps, Marseilles (even if the name had to be spelled wrong twice), for, although that building is twenty-five years old, its interest does not flag; and so it was a good thought to give a view in Hudson Park, New York, where an attempt at a formal garden was made under unwonted conditions. There is much attention given to gardens and parks, and, on a page not easily identified because none of the pages entirely occupied by illustration is numbered at all, there is given a map of the Boston parkway system—an admirable thing, which every one ought to study. A certain number of the illustrations have critical remarks included in their legends. These are judicious and interesting, but it is perhaps not wholly regrettable that this custom cannot be uniform. The reader who is inclined to be hypercritical may easily set up the theory that it would be far less agreeable and less safe to criticise in this way one design rather than another, and yet this seems to be an argument rather for abandoning the criticisms than for increasing their number; for how could we look for such boldness on the part of any editor as that he should criticise "with equal hand" the twenty-year-old work of a foreigner and the contemporary work of a fellow-citizen?

—The 'Stephen A. Douglas' in the "Riverside Biographies," by W. G. Brown, is one of the best volumes of a series that has some excellent numbers. The distinction of its quality is that it is written with a dramatic sympathy which does not for a moment confuse the writer's moral discrimination. We fear at first that it is going to do so, or that Mr. Brown is not going to take a side, one way or another; but our fears are dispelled when we come to the compromises of 1850, and, four years later, to the Kansas-Nebraska legislation. In the former we have Douglas faithfully represented as the most powerful and efficient advocate of those measures which were the latest fruit of Clay's unprincipled and superficial mind. In the latter we see Douglas taking a leading part in the renewal of the conflict to which the compromises had sung a temporary truce, "calming," as Rufus Choate said very handsomely, "with instantaneous and mighty charm the madness and anxiety of the hour." Douglas's characteristic note was moral indifference to the character of slavery. He did not care, he said, whether slavery was voted up or voted down. But we are invited to admire the splendid force with which he drove home the logic that, from the compromises of 1850, deduced the repeal of the Missouri legislation of 1820. We can admire with less qualification when the Lecompton measure put Douglas to a resort which, relatively to the Buchanan policy, was morally attrac-

tive, and was accepted by Horace Greeley and some others as the best way out. The influence of Douglas in disintegrating the Democratic party, and thus making Lincoln's election possible, is vividly brought out; so, too, his influence upon the Northern Democracy, tending to the creation of a war party from its ranks, but for which Lincoln's task would have been harder than he could perform. At various points the parallel between Douglas and Lincoln is exhibited in a striking manner. The former's rapid advancement is contrasted sharply with the latter's long delays. The closing page will satisfy those who like to have a moral clearly drawn. But why do we not have a full biography of Douglas as good as this, adequate to the brilliancy of his daring and the tragedy of his defeat?

—Mr. C. T. Whitmell of Leeds, England, reports an expected opportunity to make a unique observation, about the 17th of July next, of the visibility of the main body of the planet Saturn through what is known to astronomers as the Cassini division in the ring. According to Professor Barnard's estimates, this division of the ring is 2,270 miles in breadth; and, assuming that the ring is fifty miles in thickness, Mr. Whitmell computes an effective opening of rather more than 800 miles, corresponding to an arc of 0.2″ as seen from the earth. Under these conditions, the earth and the sun being at that time equally elevated above the plane of the rings, a line from the sun to the earth will pass through the rift in the ring to the planet; and an observer here, if suitably placed, should be able to view through this rift a portion (very small, it is true) of the planet's surface lit up by the ray of sunlight which has passed through the rift, and is reflected back by the planet through the rift and to the observer. What is expected to happen, then, is that a small portion of the arc of the Cassini division crossing the planet will appear bright instead of dark. This observation, never before made, will naturally be one of peculiar delicacy and difficulty. On account of the present south declination of Saturn, it may be caught by astronomers in the southern hemisphere, while a view of it may be denied to our northern observatories. There is, of course, for Saturn at the same time a solar transit of the earth, nearly twelve hours in duration; but the Saturnian inhabitant who would see it must be armed with a good telescope, for the earth, although 8,000 miles in diameter, is so remote from Saturn that it will be projected on the sun as a minute black speck about the size of a golf ball two miles away.

—A Tupi-Portuguese dictionary of 1795, which was almost forgotten on account of its scarcity, has just been remodelled and republished by Julius Platzmann. Although the name of the author is not mentioned on the title-page, nor anywhere else in the volume, its intrinsic merits have caused its republication by the celebrated Leipzig firm of B. G. Teubner, and Mr. Platzmann has not failed to enrich the volume with accounts of his Brazilian voyages and South American linguistic bibliography, in which he is as much at home as in the geography and ethnography of that distant continent. The translation of the Portuguese definitions into German was the editor's purpose —a task not only tedious but eminently difficult for a large portion of the work. A great number of botanical, zoölogical, and other physical terms had to be presented in another language, and this implied in many instances a special knowledge of the natural objects to be mentioned. The verbatim or literal German translation of the Tupi term often differs from the one to be used in literary German, as Platzmann is well aware when he confronts the two definitions in the same item. No second or Portuguese-Tupi part ever followed, so far as known, the publication of the first; but from this first one the editor has assiduously compiled a German-Tupi part, which fills about the same number of pages and will prove indispensable for a thorough study of Tupi. This Indian language is now heard only in a few parts of Brazil, and in the corrupted form called *Lingoa geral*; for wherever Tupi was formerly spoken in the older and purer form, it has been mostly displaced by Portuguese. The title which Platzmann has given to the book is 'Das Anonyme Wörterbuch, Tupi-Deutsch und Deutsch-Tupi.' The map is affixed to the volumes mainly to show the sites now occupied by the ancient and modern Tupi tribes.

HELMOLT'S UNIVERSAL HISTORY.

The History of the World: A Survey of Man's Record. Edited by Dr. H. F. Helmolt. With an introductory essay by the Right Hon. James Bryce. [English translation.] Complete in eight volumes. Vol. I. Pre-History—America and the Pacific Ocean. New York: Dodd, Mead & Co. 1902.

The *Weltgeschichte* is a type of history which the German loves to produce; but it must not be thought by those who have yet to make their acquaintance with Helmolt's 'Weltgeschichte' that this encyclopædic work is but another example of a well-known species. In fact, it resembles the *Weltgeschichte* of Ranke or of Weber no more than it does the 'Histoire Générale' of Lavisse and Rambaud. It differs from all predecessors both in conception and in manner of treatment. It starts out from a new idea, and it is executed in a style which corresponds with the novelty of the motive.

By way of contrast we are taken back to Hegel and his 'Philosophy of History.' It will be remembered that this distinguished metaphysician, when lecturing upon history, paid little regard to any other continents save Asia and Europe. Australia, according to his view, was physically imperfect; in Africa, man had been dwarfed by nature; the civilization of America was only a faint reflection of European civilization. Even when he had reduced the range of his vision to Asia and Europe, he found his principal interest in the states of the temperate zone. As it passes from China to Germany the *Geist* proceeds in a straight line through certain elect nations, and the rest of humanity is relegated to the dusky hinterland of oblivion. Hegel lectured more than two generations ago, and a good many things have changed since his day, including our outlook upon the subject-matter of history. We have burst through the trammels of the notion that history is past politics. We have passed beyond Asia, Europe, and America. Not only do the data accumulate, but the intellectual circle is constantly widening, until now, when we think of history, we call up a hundred fields of activity and all mankind.

Helmolt's 'Weltgeschichte' is cosmopolitan in the broadest sense. Unlike the Oncken series, it is more than an *Allgemeine Geschichte in Einzeldarstellungen.* The editor begins by recalling those centuries when historians had no thought of the races which lived just beyond their own national neighborhood.

"Fortunately," he proceeds, "the standard for judging events in the world's history has become far more comprehensive than would have been considered possible a few years ago. Therefore the time has come for us to think of such a work. Universal history is the history of the development of mankind in the aggregate. Previous works bearing this or a similar title have fallen short of their promise; the relation of any one of them to a true universal history is that of the autobiography of a man to the history of his time."

Here, then, is the central idea. "Universal history is the history of the development of mankind in the aggregate." *Weltgeschichte* should be made to mean the history of the whole human race on the earth. Dr. Helmolt is under no illusions regarding the difficulty of his task, and the impossibility of producing any results which are more than tentative:

"The high ideal of writing a complete universal history will never be attained; for the more extensive our investigation, the more often shall we discover unexpected doors which open only to mysterious voids and obscurity. But there are ample materials for a work that only claims to be a preliminary study for a universal history; and the greatest joy of a conscientious worker lies in the thought of that which will be accomplished by his successors."

Having fixed upon a purpose, the execution remains. Out of several possible courses which were open, Dr. Helmolt chose that of arranging his scheme with regard to ethnographical divisions. Here one sees the influence of Professor Ratzel, who is an important contributor to this work, and who forecasts, in the introduction to his 'Völkerkunde,' the preparation of a new history on the present lines. Having accepted the principle of ethnographical division, the question next arises, Where shall the survey begin? Ratzel again furnishes the answer by pointing out, also in his 'Völkerkunde,' that when we look at a map on Mercator's projection, the Americans are seen to occupy a position on the eastern wing. They are "opposite to and most distant from those whose habitation is on the eastern edge of the dividing abyss of the Atlantic Ocean." Accepting this fresh interpretation of *ex Oriente lux*, Dr. Helmolt commences with the inhabitants of America, including races of European origin; then passes by Oceania to Asia, crosses that continent from east to west, enters Africa from western Asia, and ends his course in Europe. Though other continents come first, Europe receives five volumes out of eight, and there is no disposition to accord either primitive man or the backward races which lie upon the fringe of history more space than they really deserve. Dr. Helmolt has been ably supported by the younger historians of Germany and Austria. His staff of collaborators includes more than thirty scholars, some of whom possess an international reputation.

The English translation of Helmolt's 'Weltgeschichte' is now beginning to appear, and we have been led to make the foregoing statement concerning the scope of the work because the original, while known to scholars, has not yet forced its way to public notice on this side of the Atlantic. Not long ago, indeed, we saw it likened in a learned periodical to Ranke's 'Weltgeschichte,' and placed in the same category. The subject involves a good deal of general statement, and general statements in German have not the literary finish and compactness which they wear in French. Accordingly, the task of the translator is no easy one, and we have noticed in the version before us a tendency to follow the German idiom somewhat too closely. However, we are not pointing out a serious blemish. The work possesses great importance from being the first serious and systematic attempt on a large scale to write the history of mankind in the aggregate. It considers geographical and ethnological factors with special care, and lays much stress upon interrelations, collective forces, and international tendencies.

The publishers prefix to the present translation a note from which we shall extract one sentence:

"They [the publishers] have been fortunate to find in Dr. Bryce an enthusiastic admirer of the monumental work which modern research and scholarship have created, and they feel confident that Mr. Bryce's eloquent exposition of the plan of the present work, and the whole philosophy of the world's history, will not merely be read for its own interest, but will win many readers and students for the work itself."

While this sounds like an advertisement, the statement made is not couched in language which is much too strong. Mr. Bryce has written something more than a preface. He has written a general introduction, and if it is not an exposition of "the whole philosophy of the world's history," it is none the less a thoughtful essay of more than forty quarto pages on the history of the world, or, we might better say, of man in his relation to nature. Dr. Helmolt has a long chapter of his own on "The Matter and Aim of a Universal History." Mr. Bryce has discussed the same subject in a different way and with much greater incisiveness. His introduction is remarkable for its command of salient points in historical geography, but it is more remarkable still for the wisdom of its concluding observations on the increase of human resources, the evolution and development of man "from the side of his relations to space," and the course of history as establishing a general law of progress.

Mr. Bryce's paper covers a wide range of interests, and contains material that would amply furnish forth a separate article. It is the utterance of one who has reflected long upon the larger problems of history, and has not suffered his perception of outlines to be blurred by a too close scrutiny of details. The majority of historians live in the concrete, or, more often, in the highly concrete. Theorizing, when it is attempted, does not seem to be their strong point. Mr. Bryce comes forward neither as a philosopher nor as a prophet, but the sagacity with which he is endowed makes him suggestive even where he is least dogmatic.

Into an account of the views that are here expounded we shall not enter, for they cannot be condensed briefly, and every historical student should read the whole essay; but the concluding passage we wish, for several reasons, to quote. Though Mr. Bryce is averse from the mania of prophecy, he brings forward a few negative predictions, after which he concludes as follows:

"It may seem natural to add the further prediction that the great states and the great religions will continue to grow and absorb the small ones. But when we touch topics into which human opinion or emotion enters, we touch a new kind of matter, where the influences now at work may be too much affected by new influences to admit of any forecast. Conditions might conceivably come into action which would split up some or most of the present great states, and bring the world back to an age of small political communities. So, too, though the lower forms of paganism are fast vanishing, and the four or five great religions are extending their sway, it is conceivable that new prophets may arise, founding new faiths, or that the existing religions may be split up into new sects widely diverse from one another. Even the supremacy of the European races, well assured as it now appears, may be reduced by a variety of causes, physical or moral, when some centuries have passed. Whoever observes the predictions made by the most observant and profound thinkers of the past, will see reason to distrust almost all the predictions, especially those of a positive order, which shape themselves in our minds to-day."

SIX NOVELS.

The Master of Caxton. By Hildegard Brooks. Charles Scribner's Sons.

The Fighting Bishop. By Herbert M. Hopkins. Indianapolis: The Bowen-Merrill Company.

The Son of a Fiddler. By Jennette Lee. Houghton, Mifflin & Co.

Mary Garvin. By Fred Lewis Pattee. Thomas Y. Crowell & Co.

Aliens. By Mary Tappan Wright. Charles Scribner's Sons.

Angelot. By Eleanor C. Price. Thomas Y. Crowell & Co.

The libraries of the future will be constrained to set aside whole departments to the Virginia novels that are pouring from the press. Colonial, ante-bellum, post-bellum, inter-bellum, red, black, and white, they come in inky troops. We know them like our pockets, from curled cavalier to braided pickaninny. Yet Hildegard Brooks, in 'The Master of Caxton,' a novel of Virginia (for we take it that Rolfe Courthouse can be in no other State), has contrived to give a new turn to the familiar theme by showing us the best-hated class in a winning aspect. The heroine, born of poor white parents, is brought up at the North; she returns to her home when she is grown, and casts her lot with her family, bringing Northern thrift and method to the civilizing of three brothers, amiable, but congenitally irresponsible. Far from wishing to elevate them socially, she discourages their acquaintance with the neighborhood aristocrats, and shows herself as respectful of caste as any patrician. She succeeds in imparting to her young fauns some degree of business conscience; trying to strangle their love affairs and her own, she fails; in failure or success, she is a strong, likable, and human creature. "Virgie," her high-caste friend, in every way her inferior, is an admirably drawn example of her kind, fascinating, and at heart faithful; of whom it may be said that the laws of logic, responsibility, relevance "look in their faces to forget their errand." "Bud," the chief of the three brothers, is excellently depicted in his illiterate and sweet-natured elegance. The German-Americans are less well done, but very good is the seemingly shiftless, halting hero, Don, with his contradictory masterfulness and hesitancy. He is a puzzle that is comfortably explained at last. If the dénouement is not absolutely exciting, yet it is of a certain originality, and sets the seal of a graceful distinction on a novel that is both unpretending and unhackneyed.

"This story of a family," as Mr. Hopkins calls his book, in dedicating it to his two sisters, is about Cæsar or nobody. That is to say, it is not greatly a story unless it is about Bishop Hopkins, who, like Bishop Ambrose of the book, was essentially a fighting Bishop, particularly when the abolitionists were his opponents. He was a man of varied talents, which included musical composition, and he had a son who, like the Stephen of the novel, devoted a goodly talent and an eccentric nature to the advancement of choir-boys and the calumniation of German music. But though as a novel the narrative rambles, the Bishop's portrait is an impressive one, whether from life or not, in its fierce strength and pugnacity, its unexpected tendernesses, its usually too late repentances, and its wholly unforeseen reasonablenesses. The large family of sons, in their varying relations to this fond but terrible father, are more or less real in effect. The most rebellious of them could never quite attain to independence of the father's authority. In his presence they were always little boys, naughty or good. But the Bishop was too large a man not to submit to the march of events. When, against his convictions, the slaves were freed, the "indomitable old soldier of the Church Militant" recognized that things had happened, and girded on his armor at seventy to work for Church colleges and an educated negro ministry. Here we leave him, not sorry to have made the acquaintance of so rugged a nature. If personal affairs have been disclosed too freely for a "story of a family," it is not for the outsider, the reader of the story, to complain.

A book entitled 'The Son of a Fiddler' claims attention first of all on its musical side. The fiddler, who had run away with an actress, returned to his parents on the farm, bringing his two-and-a-half-year-old child. "He had come home to die, and he wasted no time about it." He had his fiddle, and he played for the farm hands a week before he died. First he played "the story of wandering," then "a clumsy, rhythmic gavotte," which set the village fool to doing "a giant heel-and-toe." Then "the bow stole forward in a low brooding sound," then "deepened and broadened and grew to a pastoral melody full of a rich, sweet assurance." Then it "melted away—and emerged again. It grew more definite." Then "the notes played on." Then Cousin Lois, who had come to the door carrying the child in her arms, with trembling lips and a look of questioning in her eyes, "took the melody in a full, rich voice, 'Home, home, sweet, sweet home!'" Then "the men stirred uneasily for a moment. Then one by one they joined in, singing with free, hearty vigor." Cousin Lois hid the

fiddle when the fiddler died, but later the boy found it, replaced the strings, and repaired the bow—evidently a violin-mender by heredity. At the age of thirteen he is found playing out of doors on a May morning. Though quite untaught, he brings "a wail of protest and courage" from "the long shape." Next he closes his eyes while "the bow groped, and rose and fell," and the notes "crowded fast and faster, in a joyous clatter of sound. The robin in the apple-tree perked an amazed eye through the blossoms." We do not criticise the robin; his conduct was natural. Indeed, we feel like that robin as we read of Alec's later feats. Through heredity, too, he remembers the clumsy, rhythmic gavotte, for when he played it in Boston a few years later for a German musician, Herr Mynter tells him that it was himself who played that tune for the fiddler's father "dwendty years ago, vun day"; adding, "I neffer put dat tune on paber." In Boston, Alec hears music and sees acting—how abundantly, we may infer from finding that, at the first performance he attended, the programme included Don Juan, a new garland dance, and a musical afterpiece.

Once he entered an empty theatre to play "the mood of the streets"; two actors entered, and he flooded the house and bore them "on a sea of light—out through space—beyond space—where the stars grow dim and the soul is freed." At another time, in the theatre, he flooded the house some more till the sound "gripped the heart-strings, . . . the listeners forgot to listen. They forgot where they were. They forgot that it was music"—and perhaps it wasn't. By Herr Mynter's advice, Alec and his bride sail for "Shairmany" in the last chapter, that he may study in Leipzig with the only man who "can teach petter as Mynter." As they are sailing out of the harbor, Alec's little daughter asks him, "What is a fool?" His reply is, "I could play it on my violin. But I can't tell you. Ask your mother." There is a pastoral side to the book, full of eggs and hay, and a city side, full of actresses and ballet, with good nature everywhere. There are two technical fools, with others. And never in one plain, kind American novel have been met together so many illegitimate children. The style is fidgety, the clauses short but thick. As for the adverbs, they are for profusion like the water that comes down at Lodore.

The power of music is further exemplified in 'Mary Garvin,' where the hero is first attracted to the heroine by hearing her "rich alto in minor key," and where his final corralling, after great wanderings, is accomplished (six hours by the clock past the other girl) through the "helpless, hopeless passion and quivering pathos" of "Annie Laurie." For the rest, the story is a thoroughgoing New Hampshire drama, rising in maple sugar and setting in mince pie. There is a good deal that is fresh and interesting in the pictures of farm activities and of the great abandoned farms of New England, and this serves as relief from the comic relief furnished by Joel and others, who, indeed, according to their lights, provide good sayings and stories and wholesome philosophy. Witness Asa on Sunday work: "I've known lots er folks to pitch right in on Saturday 'n' mow down about all the grass they hed, then claim that it wuz absolutely necessary to work on Sunday to save it from spiling."

'Aliens' stands out prominently among novels of the South for breadth, for impartiality, for force. The region is the cotton belt; the time, contemporaneous; the motive, a showing of how little reconstruction has reconstructed, and of how worse than useless are many of the attempts to foist Northern ideas on Southerners of either color. The little colony of Northerners living in the town of Tallawara fall under the witching spell of the South, yet grow daily more and more aware of the unbridgable chasm between them. The conscientious New Englanders cannot understand why the negroes should not hold meetings; the Southerners cannot convince any outsiders that the mere word insurrection suggests to Southern ears enough to account for the ostracizing of Northern mission-school teachers. Mrs. Wright appears capable of understanding both points of view—so capable that her book makes a profound impression. As a story it is absorbing, in spite of some floating threads of diffuseness and disconnectedness. As a political document it is profoundly sad; its very freedom from exaggeration and morbidness only serving to deepen the shadow. Copies of Booker Washington's writings ought to accompany it if it is not to make sorrowing pessimists of its readers. The story is not technically one of unmitigated gloom. There is infinite humor and variety in the types depicted; hardly one which, however familiar its genus and species, is not developed into individuality. The Southern flirt is even more originally flirtatious, unreasonable, and charming than usual. The New England women are human, though pronounced. The Southern politicians grind their axes with a difference. A few of the private problems lack decisive handling, as the relation between Professor Thurston and his wife. A few of the characters are not needed at all. But never has the butterfly man been better delineated than in Trenholm, who—says Zoë—"is a part of our education; sooner or later every one of us falls in love with him. We've got to have it, like the measles or the whooping-cough. . . . I'm a scarlet-fever case myself." In fine, 'Aliens' is emphatically a book to be read. It haunts the thoughts, and it leaves the reader with a patriotic but perhaps wholesome heartache.

In 'Angelot' Miss Price has written an interesting story of the Anjou of 1811, when Napoleon was every one's creed, whether as god or devil; when the imperial peace edicts were no less complicating than conscription; when the behavior of the disaffected, the submissive, the adoring, kept society in a ferment. The field is not new, but always rich, and Miss Price has made it seem new by her happy choice of material, investing the book with interest as a story and as an abstract of the time. Perhaps the narrative is sometimes repetitious; perhaps the type is sometimes insisted on at the expense of characterization; but on the whole the social, political, and historic elements are nicely balanced, with desirable emphasis on the love story and in the refreshing style of a gentlewoman. The little book may be heartily commended.

Mexico as I Saw It. By Mrs. Alec Tweedie (*née* Hurley), Author of 'Through Finland in Carts,' 'George Harley, F.R.S.,' etc. Illustrated from photographs by the author. The Macmillan Co. 1901.

Vivacity and the power of enjoying one's self under all conditions are qualities invaluable to the traveller and not useless even to the writer of a book of travels. They constitute a good part of the merits of Mrs. Tweedie's book. Its title is eminently appropriate, for the authoress does not set out to describe Mexico as it is, but rather to tell her readers what she did and what she saw in Mexico. Her remarks on the country and the people are incidental to the narrative of her own progress—we might almost say her triumphal progress—through the territories of the Mexican republic. She has a quick eye and a facile pen—an eye and a pen well trained by previous travels and by previous essays in authorship; so she is able to convey a fair notion of the more obvious surface aspects of things, and her pages can be read not only without effort, but with some admiration for her energy and her good spirits.

Having evidently had a "real good time" in Mexico, she succeeds in conveying a part of her own enjoyment to the reader, who must not complain if he does not find in her well-printed and copiously illustrated volume either the vivid descriptions or the solid information or the philosophic views which she never undertook to give him. Nevertheless, she does sometimes touch upon economic and commercial topics. She deplores the decline of English trade and sees danger in American competition. She is impressed by the failure of the English free-trade system, and has a simple explanation of the phenomena:

"American [locomotive] engines, bridges, printing-machines, and automobiles are flooding our [*i. e.*, English] markets. This great Steel Trust is going to close many of our doors, and we intend to allow its produce to land upon our shores free!

"Other countries are growing rich by means of protection; and England without it is now struggling to keep her head above water. All countries should be free, or all protected, otherwise our handicap will surely prove more than we can stand.

" 'Why is America so rich?' I asked one of the greatest statesmen in the States.

" 'Because of the duties you pay us and the goods we send you free!'

"And he knows."

Evidently there is no more to be said.

It would be a good exercise for a college student to be set to piece together a connected account of Mexico from the isolated facts and summary judgments which lie scattered here and there through these four hundred and sixty pages of the largest octavo. The effort would resemble that of hunting through Shakspere's plays to find the materials of Bacon's 'Novum Organon.' Nevertheless, the thing may be done. We have gathered from Mrs. Tweedie certain impressions of Mexico. They are somewhat as follows:

The country presents singular contrasts of civilization and barbarism; but the barbarism is not confined to the agricultural Indians. Some essentially primitive superstitions and usages appear among the richer and better educated inhabitants of the cities. The Indians are good workers when

they work, but naturally lazy and addicted to gambling, as indeed everybody is in Mexico. Gambling is the characteristic vice of the country among pure Spaniards, among the half-breeds, among the native tribes. The Indians are now generally quiet, under the stern discipline of the present Government, which, when a crime has been committed, shoots the suspected persons with little or no trial unless they can prove their innocence. But they are vindictive; and a harsh or unjust employer may probably perish by the knife at last. They are extremely superstitious, and in many places scarcely weaned from the worship of their ancient deities. The small Europeanized upper class is exclusive. Their courtesy is wonderful, their society delightful. They never see one another quietly in one another's houses. If a party is given, it becomes a banquet, for their hospitality, though not frequent, is lavish.

"Mexicans are very Latin by temperament. They become wildly enthusiastic over some person or thing which excites their interest for the time, but they soon weary of the new hobby, and the passion dies out almost as quickly as it was kindled. They are excitable in conversation, gesticulate freely to emphasize their words, and one feels the warm blood of a Southern race is tingling in their veins. They say all manner of delightful things, but, of course, they never mean them."

The extreme generality of this last sentence must, we suspect, be due to the modesty of our authoress, who did not wish her readers to suppose that she believed all the delightful things which the Mexicans are here recorded to have said about her.

The country is extraordinarily rich in its agricultural products and in its mines, but there has been so much trickery and fraud practised—not by the native Mexicans, for they don't undertake this kind of enterprise, but by foreigners—in bringing out mining companies, that English investors ought to be very careful to make inquiries before they take shares on faith of a prospectus. The three great wants of the country are labor, fuel, and water; the last being especially deficient in the northern provinces, since even where rain falls during the wet season no proper arrangements are made for storing it.

The drawbacks to travelling are the absence of good inns and the prevalence of dust-storms. Apropos of travelling, a piece of advice is given which Englishmen may need, but Americans do not: "Never refuse the offer of a private car." Thieving is extremely common, but highway robbery has been effectively repressed by the stringency of the Governors and by the efficiency of the *Rurales*, a gendarmerie which the President has formed out of those who were formerly bandits.

The favorite diversions of the people, besides gambling, are bull-fights and cock-fights. Mrs. Tweedie went to see both, in order to determine whether or no they are cruel sports. She pronounces that the bull-fight is not cruel (except so far as the gored horses are concerned) when the matador is skilful and can kill his bull by one well-planted thrust. Neither, in her judgment, is a cock-fight cruel when one of the birds kills its antagonist immediately. If the conflict is prolonged until both are badly wounded, cruelty may be said to come in. This seems a rather indulgent view. There is no better test of the true character of a nation than its sports; and the passion for bull-fighting, cock-fighting, and gambling among the civilized townsfolk throws an unpleasant light on the mind and tastes of the average Mexican. It is, however, to be remembered that a century has not yet elapsed since the Inquisition was abolished. Cruelty needs some time to get out of a people. We are told—and are glad to hear it—that the President of the Republic and his wife do not approve of bull-fights. Mrs. Tweedie dilates more than once on the merits and services of Gen. Diaz. She thinks him "the greatest dictator of modern times," and doubts whether any other man in the nineteenth century has done so much.

"As a soldier he has quelled war and established peace. As a ruler he has made a country—formerly insecure even to its own inhabitants—safe for all. As a diplomat he is at peace with the world. He has paid enormous debts and created solvency—now even developing into wealth—in Mexico." . . . "Has any man of humble origin, practically self-educated, raised himself to such a position, and brought his country from battle and murder to peace and prosperity?"

Porfirio Diaz is no doubt a remarkable man, one of the most remarkable of our time, whose character and career well deserve to be described by a more exact and critical pen than our authoress claims to wield. There does not seem to exist any good history of Mexico, and the subject may be commended to one of those ambitious young students whom our universities are now turning out in such numbers. Gen. Diaz has achieved great things, not for himself only, but for the country, and those who know it seem to think that his work, or at least a great part of it, may survive him, for he has accustomed the people to realize the benefits of order and to desire to advance the material prosperity of the republic.

We must not forget to add that Mrs. Tweedie's volume is embellished by a large number of photographic views, mostly of figure subjects, but to some extent of buildings also. Her interests lie in man rather than in nature, and the only elaborate description she gives is of the extraordinary caverns of Cacahuamilpa.

The Moors: A Comprehensive Description. By Budgett Meakin. The Macmillan Co. 1902. Pp. xxii, 504. 132 illustrations.

A Ride in Morocco among Believers and Traders. By Frances Macnab. New York: Longmans, Green & Co. 1902. Pp. xii, 368. 10 illustrations and map.

Seventy-one Days' Camping in Morocco. By Lady Grove. Longmans, Green & Co. 1902. Pp. xii, 176. Portrait and 32 illustrations.

Mr. Meakin's Moroccan trilogy is now completed, and, in spite of all the criticisms which we have made or may yet make, our thanks and congratulations must be most heartily extended to him. There can be no grain of doubt that his book is a great one, and fills very worthily a felt gap in our means of information as to the East. That it has come exactly in time is also certain; before many years Morocco will be a friction-point of the first importance. Already the eagles are gathering, and the tourist is writing his little books of patriotic protest against the evil machinations of all the nations but his own.

The present volume is easily described. Its aim is to do for Morocco what Lane did for Cairo. It is a description of manners and customs, and differs from Lane's model book only with the difference between Lane and Mr. Meakin, and between a city and a widely extending and broadly varying country. These differences, in truth, are large enough, and the user of this book will need, especially if he is not a professed Orientalist, always to bear in mind that Mr. Meakin's knowledge, indeed, has come with the seeing of the eye and the hearing of the ear, and so far may be trusted, but that he has also been wofully handicapped by a lack of thorough Arabic, and evidently has made no fundamental study of the institutions of Islam. The strength which Lane drew from his labors in law, literature, and theology under the guidance of the shaykhs of the Azhar is wanting here. In consequence, to judge from a twice-repeated error on p. 226, he does not seem even to have learned that in Arabic a noun in the construct cannot take the article; and on page 308 he speaks of "nahu, sarf, and ájrûmîyah" as elements of grammatical knowledge, which is much as though we were to divide grammar into syntax, accidence, and Lindley Murray.

But, having said this, no further criticism need be made. Mr. Meakin's work is full and conscientious, and his estimates of the Moorish character and of the present Moorish conditions are incisive and exact. As examples of details, in spite of an evident liking for the Jews, he perceives—and all do so who have been long in contact with the East—that their practice of usury, their greed, and grinding of debtors, have much or everything to do with the outbursts of fury against them; that it is not foreign protection which is needed for them, but education and social development among themselves. In this volume also he is as emphatic as in those which have preceded on the value and necessity of mission work in Morocco. The knowledge of the resident of years is laid against the snapshots of the traveller. Finally, and above all, he is to be congratulated on the manly and straightforward preface, in which he sums his own opinion of his work. It will go far to annul and disarm criticism.

Miss Macnab's book is in a very different class. She is evidently an old traveller and a practised writer; she has roughed it diversely, and possesses the gift to describe her sensations and experiences well. But she was never in the East before, and so could look at the Moors in a more human way than can any sated Oriental wanderer. To her they were really "folks," if rather akin to "niggers," and not simply another lot of Mohammedans. Miss Macnab's heart, too, is large, even going out to mules, and so she has laid down here a most sympathetic record of her rambles. Fairly, the only beings outside of the pale of humanity for her appear to be missionaries. Towards them she has no bowels of compassion; they are utterly, absolutely odious. From hints dropped she would seem to be what the Scotch call "a daughter of the manse"; if so, it was a very "established" manse, with high objections to dissenters and all unattached evangelists of dubious upbringing and more than dubious social standing. But, on another side, her interest in trade and her belief in its civilizing value are great, and that may be

another explanation. The merchant and the missionary seldom, except when both are most exceptional, work together easily. From trade, too, springs her enmity to consuls and diplomats generally. They are, it is true, somewhat nearer to salvation than missionaries, but still a most useless and reactionary body of men. They, with the Foreign Office, give no adequate support to British trade. Of course, the same indictment is laid by the merchants of every other country against their own governments.

But, leaving such phases of the wrath of even the most heavenly minds, this book is one of a very remarkable value. With all her lack of Oriental experience, Miss Macnab shows a breadth and depth of insight into conditions of life, a possibility of getting upon terms with a people of unknown tongues and ways, a readiness of sympathy, a knowledge of economic possibilities in trade and agriculture, that are simply marvellous. There is not with her the plodding industry of Mr. Meakin—for that she had no time; but there is a quickness and certainty of grasp which is assuredly of kind with genius. Not statistics does she deal in, but appreciations. And all is enveloped in an exquisite medium of caressing humor, which carries the reader along into and through this new, if narrow, world. For, geographically, the ground covered by Miss Macnab was not extensive—Tangier to Tetuan, and back, then down the coast to Mazaghan, then to Marrakesh, or "Morocco City," back to the coast at Mogador—the usual tourist round; but it was done all the way in the closest contact with the people, and the book which has come from it is a delight and an illumination.

It is a pity that little of the like can be said for Lady Grove's venture. Without doubt it will be found very readable by her friends, who can understand the allusions and personalities, amiable and semi-amiable; but, for the unprivileged outer public, these must remain somewhat pointless. A lively onslaught on the irrepressible Mr. Cunningham-Graham is to be highly approved, and an interview with the Sultan—a beatitude which Miss Macnab did not reach—has its side of humor. Other result from the prettily gotten-up book cannot be registered.

Cape Rosier,

MAINE COAST.

FOR SALE—To settle a joint account—The beautiful headland known as Cape Rosier Head, together with four hundred acres of land attached following the shore for two miles on either side. This property is part of the main land, and is within half an hour by steamer from Isleboro and Castine. There is a steamboat landing within a mile. The whole tract is greatly diversified in character. The shores have bold rocks, coves, and beaches, and the land comprises beautiful woods, open fields, and pastures. There are several farmhouses on it. The drives are varied and extensive through and from the property. The views from the "Head," as well as from many other points on the shore, are most beautiful and varied, commanding the whole range of the Camden Mountains, the Archipelago of Islands in Penobscot Bay, and the open ocean in the distance. The property is offered for sale as a whole only, at a low price per acre. Address

J. MURRAY HOWE, Trustee,

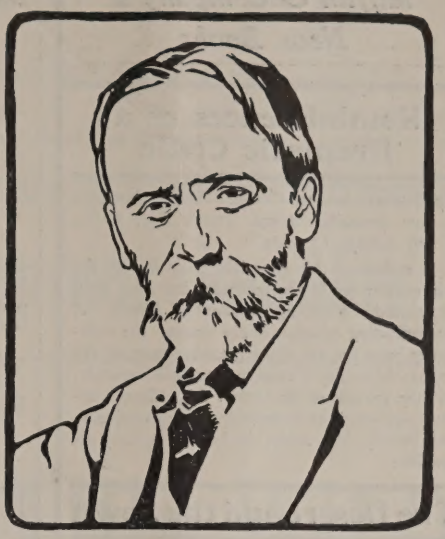
A BLACK DIAMOND NOVEL

PUBLISHED SATURDAY

Bylow Hill

By GEORGE W. CABLE



Of whom the Atlantic Monthly says:

"I know of no one fitter to stand
in the place next Hawthorne's."

In the midst of a quiet New England village, Mr. Cable has set a story which might have engaged the sombre power of Hawthorne. In telling it, however, he has used the humor and charm of his best work as well as this intensity, so that the result, especially as the tragedy is confined to the mind, is one of more than a single motive and holds the reader by more than one interest. It is Mr. Cable's first story of the North.

With illustrations in color by F. C. Yohn. $1.25.

The Life and Letters of Lady Sarah Lennox

Daughter of Charles, 2d Duke of Richmond, and successively the wife of Sir Thomas Charles Bunbury, Bart., and of the Hon. George Napier; also a short political sketch of the years 1760 to 1763 by Henry Fox, 1st Lord Holland.

Edited by the Countess of Ilchester and Lord Stavordale.

A new and cheaper edition rendered necessary by the large demand created by the appearance of the original and more expensive edition recently imported. This is a complete edition in all respects, and carries all the illustrations.

Freely Illustrated. $4.00 *net.*

THE LONDON TIMES

says this of

Edith Wharton's "The Valley of Decision"

"THE promise of earlier work is more than fulfilled in 'The Valley of Decision.' The style is raised and chastened. It is as if a singer with a beautiful voice but an uncertain ear had trained herself at last to sing dead in tune. If there is little scope for humour in the picture of decadent Italy that she draws, there is room and to spare for her exquisite sense of beauty, and she sets her flashing descriptions like gems upon that woman country.

"As in 'Wilhelm Meister' of the planless charm, of which we are often reminded, there are endless episodes, and these are so delightful that we forget the hero altogether. The fascinating tale of Mirandolina might woo a gentleman to forget his dinner and a lady her afternoon-tea."

"The little ducal Court, the connoisseur ecclesiastic, the persecuted Liberals, the Jesuit, the popu'ar stage, the merry nuns of Venice—all these are studied, and studied with the rare insight of genius. We could be happy with any one of them. We would say to every one of them, 'Stay, thou art fair!' but they will never stay, they melt into each other like the dissolving views in a magic lantern, and at last, tired and bewildered in a world of rainbows, we long to be left alone with the story. The period is the hero."

In Two Volumes. $2.00.

CHARLES SCRIBNER'S SONS, New York

Houghton Mifflin & Company's New Books

Reminiscences of a Dramatic Critic

By Henry Austin Clapp. With photogravure portraits. Large crown 8vo, $1.75 *net*; postage 13 cents.

A review of the American stage during the last quarter-century by one who has long been recognized as a leading exponent of honest and discriminating criticism of the drama. He comments upon the art of the greatest actors of the period, the quality of modern theatrical literature, and the promise of the future. Mr. Clapp's unusual equipment of knowledge, large experience, and literary skill, make the book singularly attractive.

The Desert and the Sown

By Mary Hallock Foote, author of "The Led-Horse Claim," etc. 12mo, $1.50.

Mrs. Foote has never written a story so strong and full of human interest as this. The scene shifts between a military post in the far West and the Dutch farming country near Newburg on the Hudson. The novel is powerful in delineation, in development of character, and in narrative interest.

A Remedy for Love

By Ellen Olney Kirk, author of "Our Lady Vanity," etc. 16mo, $1.25.

This is a sweet, old-fashioned love story, full of happy surprises, and like all of Mrs. Kirk's novels it will be particularly attractive to girls. The story is told with vivacity, sparkling dialogue, and the highest charm of delicacy and reticence.

Lee at Appomattox and Other Papers

By Charles Francis Adams. Crown 8vo, $1.50 *net*; postage 14 cents.

Into this volume Mr. Adams has gathered some of the results of his long and valuable experience gained by travel, by the practice of great affairs, and by association with men of influence. The essays cover a wide range, are timely and thoroughly interesting.

September Days on Nantucket

By William Root Bliss, author of "Quaint Nantucket," etc. Crown 8vo, $1.00 *net*; postage extra.

A new book by Mr. Bliss, reflecting the enjoyment of early autumn on this island of the sea. It tells of the best of good times, driving about the island to Siasconset, Surfside, Sankaty Light, listening to ghost stories and tales of ancient mariners, to the accounts of old houses and the odds and ends of legend and history that cling about the place. The volume has the same charm of mellowness and the flavor of colonial times that Mr. Bliss's earlier books possess.

THE KINDRED OF THE WILD

By CHARLES G. D. ROBERTS

Author of "The Heart of the Ancient Wood," "The Forge in the Forest," etc., etc.

Illustrated with 51 full-page plates and many decorations from drawings by

CHARLES LIVINGSTON BULL

Mr. Roberts's latest work of fiction makes a most interesting addition to the slender stock of nature classics. He has studied with close and unwearied interest the lives of the great eagle, lord of the air, the panther that rules on the Upsalquitch, the lucifee, haunter of the pine gloom, Kehonka the wild goose, and all the furred and feathered creatures of the wilderness and the hunted trails. The same unwonted note that he struck in "The Heart of the Ancient Wood" is here but in deeper cadence.

A New Omar Khayyam
INDIA'S LOVE LYRICS
Collected and Arranged by LAURENCE HOPE.
Decorated cover. 12mo. $1.50 *net.*
The London Athenæum:
"Mr. Hope has caught admirably the dominant notes of this Indian love poetry, its delirious absorption in the instant, its out-of-door air, its melancholy. Slender brown limbs stir silently in the garden where flying foxes cross the moon. And always there is the poignant sense of the fleetness of love—a moment's salvage from the flux of time."

The Presumption of Stanley Hay, M.P.
A Romance by NOWELL CAY. Illustrated. 12mo, cloth. $1.25.
"Interesting to the point of excitement."—[Public Ledger, Phila.
"Will be much read, and all read."—[The World, N. Y.

By the author of "A Plunge Into Space," &c.
Kitty's Victoria Cross.
By ROBERT CROMIE. 12mo, cloth. $1.25.
A pleasing romance of two Irish girls. The New York Times Saturday Review says: "Mr. Cromie's literary style is of the best, and his romance a most interesting one."

Library of Natural History Romance
Shell Life
An Introduction to the British Mollusca. By EDWARD STEPP, F.L.S. With 32 original plates photographed from the actual shells, and upwards of 600 woodcuts in the text. Crown 8vo, cloth gilt, gilt top, price $2.00.
"This is a very good introduction to the shell-bearing creatures of British waters, salt or fresh, and of the woods and lanes. Its chief aim is to arouse interest in the organic structure of the creatures themselves."—[The Academy, London.
"The life history is narrated, and an effort made to place them in their relation to the life about."—[Book News.

ALSO, IN THE ABOVE SERIES.
The Romance of Wild Flowers
A Companion to the British Flora. By EDWARD STEPP, F.L.S. With 200 illustrations, uniform gilt top. Price $2.00.
From the preface: "Not intended for botanists, but for unscientific flower-lovers, these pages, it is hoped, will invest plants with greater interest by calling attention to those details of their structure or behavior which suggest the term romance. To-day the naturalist is principally concerned in observing the habits of the plant, its attitude toward insects, and the relation of one species to another."

By Sir HENRY THOMPSON, F.R.C.S. (London), &c.
The Motor Car
An Elementary Handbook on Its Nature, Use and Management.
12mo, cloth. Price $1.00.
* * * Sir Henry took to the motor car in his (youthful) old age, and in these few pages he describes his experiences in learning its mechanism and movement, its relation to the various living objects it encounters on the road, and naturally the writer touches on the hygienic advantages of this method of locomotion and the various forms of motive power.

Of vital interest to all who are approaching middle age.
Diet in Relation to Age and Activity,
With hints concerning habits conducive to longevity. By SIR HENRY THOMPSON. F.R.C.S. (London), etc. 12mo, clo., $1.00.
* * * Almost unique, as the gifted author is now in his 82d year, and has embodied in the above volume his experiences, impressions, and advice, extended to such an extreme period as the ninth decade.
A BOOK THAT YOU OUGHT TO READ.
"Get and read the whole book and you will be glad that you have taken the trouble."—[N. Y. American and Journal.
"Is life worth living? Punch says: 'It all depends on the liver. Sir Henry Thompson is the best living medical adviser on diet, and you can call him in simply by ordering this book."—[Bookbuyer's Bulletin.

Of all booksellers, or free by mail, on receipt of price, from the publishers.
F. WARNE & CO., 36 E. 22d St., New York

The Nation.

NEW YORK, THURSDAY, MAY 29, 1902.

The Week.

Why do the Imperialist newspapers keep on day after day writing down Senator Hoar's speech? This seems to us a mistake in strategy. Their first day's attitude was the correct one—a kind of pityingly generous sparing of the errors of a well-meaning but sentimental old gentleman. Of course, they could rake him fore and aft—but there! they would not hurt the veteran's feelings. This was the true line for them to take, but, once adopted, it required consistency in holding to it. Instead of that, our brothers of the Imperialist press have taken to refuting the Senator's speech again and again—doing it seriously, even in anger. To our humble lights, this appears to be a sad blunder. Do they not see that this course will make their readers think that there was something in the speech after all? Will not their repeated confutations wear painfully the air of gnawing a file? Really, if they persist, they may incite people to go and read the speech for themselves—and that is the last thing an Imperialist editor could desire.

Under the antiquated law which governs courts-martial in the army and navy, a reviewing officer can do no more than state his views if he disagrees with the findings in any trial. This applies whether the reviewing officer be the President of the United States or a general commanding an army in the field. Gen. Chaffee, having convened the court which tried Major Waller and Lieut. Day of the Marines, was required to pass upon the findings, and has done so in a manner extremely creditable to him as a man and as a soldier. In his opinion, neither Waller nor Day should have been acquitted, but he concedes that Waller was not guilty of the charge of murder, in view of his mental condition. As to Lieut. Day, Gen. Chaffee believes that he should have assumed the gravest responsibility which can come to any soldier—that of disobeying the commands of his superior officer. Lieut. Day had reason enough for this action. Not only was his superior ill from exhaustion, but other weighty grounds, as Gen. Chaffee puts it, "so tainted" the order given by Waller, among them reasons of simple humanity and Christianity, that Lieut. Day should have refused to put these men to death had he had either heart or judgment. As it was, he failed to seize the opportunity to prevent what Gen. Chaffee rightly terms "one of the most regrettable incidents in the annals of the military service of the United States."

What have the so-called "detractors and calumniators of the army" said that was as bad as this? Should not Gen. Dodge, the *Army and Navy Journal*, and all the other newspaper defenders of torture, of military crime, and of violations of the rules of war, demand Gen. Chaffee's immediate recall? Plainly the Anti-Imperialist virus has entered his blood. He has joined the "werewolves barking at the heels of Old Glory's defenders," and has placed an official stigma upon Major Waller and Lieut. Day which will never be effaced from their military records, no matter how many swords their misguided townspeople may bestow upon them. Gen. Chaffee has done more than this. He has shown that the murders were committed, not in the heat of battle or on the fearful march across Samar; but in camp when the danger was over, and that the helpless victims were stevedores who carried the Americans' baggage. By doing this, and by showing that Major Waller could have telephoned Gen. Smith for his sanction before executing his victims, Gen. Chaffee has swept away every possible argument which could be advanced on Waller's behalf, except that of temporary insanity.

That Methodist Bishop who was summoned as a witness by the Senate Committee on the Philippines was himself responsible for the way in which the hearing glided into a theological discussion. Asked what he knew about conditions in the archipelago, he promptly replied that our occupation of the islands was "an act of God." He did not use the phrase in the legal sense, ordinarily meaning a calamity. He referred to the Divine guidance which took us to the Philippines, though almost in the same breath he said that Mr. McKinley had told him how everything in that President's power had been done to prevent annexation. The Democratic Senators, however, are expert theologians, and soon had the Bishop wandering in the mazes of "permissive" as distinct from "ordained" evil. The Hebrew prophets occasionally spoke of "acts of God" that were evil. "Shall evil befall a city, and the Lord hath not done it?" It is one thing to refer to the divine will "whatsoever cometh to pass," and quite another to assert that everything men do is approved by the Creator. The same "act of God" that took us to the Philippines may yet bring us away. Frail mortals cannot tell what the completed divine purpose is in that regard. Of one thing we may be sure, and that is that whatever the country does will appear to a certain order of clerical minds as *vox Dei*. But this, of course, simply means that the God it worships is the "God of Things as they Are."

Some curious facts as to the religious policy of our authorities in the Philippines are presented in the *Evangelist*, which vouches that its authority for every statement is "at first hand and thoroughly reliable." It appears that the Commissioners resolved to be entirely neutral as between the Roman Catholic Church and Protestant denominations, and they concluded that the only way for Americans to demonstrate such neutrality would be to have nothing whatever to do with churches of any sort. Accordingly, instructions were issued to most of the civil employees that they should not take active part in any religious work. One of the high officials had been an active member of the Methodist Church at home and took a letter of commendation to Manila, but, in obedience to the official opinion, he has never entered a church since his arrival. A prominent leader in educational work refused to address a meeting in the Young Men's Christian Association; and another, who had made an engagement to speak at a public meeting for Americans only, was requested to cancel it because it was under the auspices of the Evangelical Union. The Commissioners themselves decided that they would never be present at any religious services; "and, as far as is known, they have not attended a regular service of any of the Protestant churches." So unprecedented a policy could hardly be justified in the mind of anybody except by its success, but the *Evangelist* testifies that it has proved a complete failure, the most important result being that "among the people of the islands the impression prevails that Americans have little or no religion."

Cuba's first difficulty will be to live within her income. Our military Government turned over the Treasury with only about $500,000 in it, and with the certainty that increased expenses and diminished revenues would for a time confront the new republic. It will have to pay salaries for work previously done by our army officers at the same time that the stagnation of trade, caused by the delay of Congress in acting upon the Cuban tariff bill, is making receipts fall off. The situation is one calling for skill and firmness on the part of the Cuban Government, as for sympathy on the part of our own. There is renewed talk at Washington of voting a lump sum to Cuba, and leaving the tariff alone. That would be, to say the best of it, like giving alms when we might give work. The most effective sympathy we can show the Cubans is to enable them to earn their

own living. To do this was the generous and statesmanlike recommendation of President Roosevelt; but his protection-ridden party in Congress has thus far refused to follow his leading.

The question whether the island of Martinique shall or shall not be abandoned is now agitating the public mind in France, as well as in the island itself. The question whether it ought to be abandoned is an entirely different one; but if we judge the future by the past, we may confidently predict that the ground will be reoccupied soon after the volcano becomes quiescent. It is the uniform testimony of history that men forget the danger almost as soon as it passes away. The burying of Herculaneum and Pompeii did not prevent the inhabitants of Campania from rebuilding their houses on the mountain sides. The outbursts of Mont Pelée and the Soufrière half a century ago did not deter the islanders from repeopling the devastated regions. The great Lisbon earthquake did not prevent the citizens from rebuilding their tenements over the very ground that had swallowed up their kindred. The Galveston flood of 1900 only spurred the people to renewed occupation of the sandspit from which their property had been swept away. So we may feel tolerably sure that neither Martinique nor St. Vincent will be abandoned. Even if the owners of the desolated fields and towns should leave them, others would flock in and take their places as soon as the immediate terror had subsided.

Jealousy among Representatives of the growing power of the Senate over Congressional legislation explains the unusual action of the House on May 20 in instructing its conferees on the Army Appropriation Bill, before meeting the Senate conferees, to refuse acceptance of certain amendments to the bill made by the upper branch. The traditional custom is to have first a "free conference," when, in case of a disagreement, either Senate or House may instruct its spokesmen to insist upon any provision on which it is set. For the House to ask a conference of which the aim is to secure an agreement, and at the same time formally and deliberately to notify the Senate that it will never agree to certain things, is contrary to all rules and precedents. It was done last week only because a great many Representatives sympathize with the views expressed by Mr. Heminway of Indiana, who "made a brief speech upon the decadence of the power of the House and the growing power of the Senate in determining legislation, and called upon the House now to take a determined stand against a further invasion of its prerogatives by the other body." The difficulty about the situation of the House is that Representatives themselves are largely responsible for the decadence of its power, because of late years they have more and more generally consented to the hasty passage of ill-considered bills with the understanding that the Senate would discharge the duty which the House had neglected by licking such measures into shape.

At the same time that *Die Nation* of Berlin was saying that Germany would welcome monuments to Washington and Lincoln, Representative Stephens of Texas was introducing a resolution to prevent the acceptance of the Kaiser's proposed gift, a statue of Frederick the Great. The peculiar kind of provincialism which lies behind Congressman Stephens's motion is in not very flattering contrast to the cosmopolitanism of Dr. Barth's journal. This resolution has just enough right in it to make one wonder how it can be so wrong. "The acceptance of such a statue by this Government would be a repudiation of its basic principles, as enunciated in the Bill of Rights and Constitution, an insult to the memories of our Revolutionary fathers, an admission that one man may govern a nation without the consent of the governed, and after his death have his statue erected in our republic, and the divine right of kings to rule thereby approved." So reads the resolution. These words have a ludicrous resemblance to sound patriotism and to common sense. They merely happen to be neither. A republic which sets up a statue to a king at most asserts that he has reigned, and it celebrates him for certain personal qualities and achievements which have become "the permanent possessions of all enlightened humanity." Let us look at the effects of Congressman Stephens's resolution: it would prevent the French among us from erecting a statue of the great law-giver Charlemagne, the Italians from doing the like honor to the heroic Victor Emanuel, nay, the Irish from perpetuating Brian Boru in bronze. Some saving sense of humor there must be in Texas which will tell Congressman Stephens that even for the offence of kingship there is a statute of limitations.

The recent Bankers' Convention at Kansas City has furnished an interesting theme for the Western press. The amount of attention given to the subject of branch banks by the newspapers, both East and West, during the past fortnight, is quite surprising. While the subject is still warm, it is fitting that attention should be directed to the clear-sighted discourse on this subject delivered by Mr. Forgan, President of the First National Bank of Chicago, a short time since, in Milwaukee, the press reports of which were rather imperfect. In this address Mr. Forgan pointed out the great economy in cash reserves that is possible under the branch system of Canada, as compared with our system of independent banks. He showed that the Bank of Montreal, with a capital of $12,000,000, carries on its business with a cash reserve of only 15 per cent., while a half-dozen national banks of the United States, taken at random, having a capital of $8,750,000, hold 41 per cent. of cash reserve. In other words, the Bank of Montreal is able to invest 85 per cent. of its total resources, while our six banks can invest only 59 per cent. The reason for this, as Mr. Forgan shows, is that the Canadian bank, with its forty-eight branches, can do its entire domestic exchange and collection business within itself, and has no occasion to deposit any of its funds with other domestic banks. The difference between investing 85 per cent. of its resources and 59 per cent. is equal to a 5 per cent. dividend on the capital of the Bank of Montreal.

When the Atlantic shipping combine was first divulged, the opinion was generally held that, since it was merely an Anglo-American Trust, and not complete or exclusive even as between the United States and Great Britain, there was no danger of a monopoly in ocean navigation. It was an element of reassurance that the great German lines running to Bremen and Hamburg were still independent. The North German Lloyd and the Hamburg-American companies were abreast of the times in every particular, if not a few paces in advance of the other "ocean greyhounds" plying the North Atlantic. As long as their competition could be relied upon, there was no danger of monopoly, and it was commonly supposed that they were beyond the reach of the Trust. It turns out that both these companies are locked in the embraces of the combine. It is the opinion of the London *Times* that they have been brought into the arrangement by compulsion—that the competition of the Trust would have been too powerful for them to resist. Whether this be the true explanation we have no means of judging.

The details of the new combination, as published in Berlin, are not quite comprehensive. It is made plain that there is to be an interchange of earnings between the two German companies on the one hand and the combination on the other, and a guarantee on the part of the latter of a certain amount of earnings to the former. Also, there is to be a "division of territory," if that phrase can be applied to the waters which compose the chief part of the earth's surface. The present service of the German companies at English ports may be continued, but not enlarged, and the combination agrees not to send any ships to German ports. The German companies may establish lines running in new directions,

calling at English ports en route, but in so far as these become competitive with lines hereafter established by the combination, the earnings shall be pooled. Future extensions are to be the subject of joint discussion. Other arrangements are made to cover contingencies and to meet possible disputes, the aim in each case being to pool earnings and to prevent competition. One clause provides that the consolidated company shall not acquire shares in either of the German companies without its consent, but "if interests antagonistic to those now contemplated by the management should attempt to obtain control, the consolidated company shall be free from its obligation in this respect." This clause seems to be very loosely constructed, since it would be quite feasible for any individual in the consolidated company to incite somebody to buy shares in the German companies, which buying might be interpreted as antagonistic, and hence as terminating the obligation. This is a minor matter, however. The great fact staring the three nations—the United States, Great Britain, and Germany—in the face is, that here is an audacious attempt to parcel out the ocean traffic of the North Atlantic Ocean and make it a private monopoly.

Lord Pauncefote's death removes an Ambassador who knew how to win the regard and friendship of Americans without any arts but those of discretion and transparent good faith. He did not make speeches in public, as is expected of our Ambassadors to England. British Ministers in this country have never had that habit. Nor did Lord Pauncefote grace academic occasions, as the French and the German Ambassadors have done. Yet, by unfailing tact and perfect diplomatic propriety, he succeeded in convincing Americans of his good will for this country. Few here believed in the reality of that initiative against us which the revelations of the German Foreign Office last winter made him appear to have taken in 1898. On that subject Lord Pauncefote's lips were sealed; but all who knew him were confident that the whole thing was a misunderstanding of his attitude and his acts. Certainly, in all that relates to a better understanding between the United States and Great Britain, his labors were most intelligent and humane. He put his name to several treaties of the highest importance, in the negotiation of which his interest was always that of preserving peace and strengthening friendship. If the most notable of these —the arbitration treaty—failed through the Senate's unwillingness, though urged by both President Cleveland and President McKinley, to reduce the danger of war to a minimum, that does not detract from the praise due Lord Pauncefote. He was a stanch friend of peace, and we should like to think it was for that reason that he was so unvarying a friend of this country.

Lord Rosebery's return to England in full cry against any Tory meddling with free trade is doubtless one more indication of his willingness to lead the Liberal party again. He certainly has a much better chance to do so on the question of taxation than on the delightfully vague issue of "efficiency" which he proposed in his Chesterfield speech. The cool reception which that met with drove him sulking to the Continent, but the new food tax and the Bury bye-election have brought him back to sound the note of party unity once more. Here is something that Englishmen can understand—can understand even Lord Rosebery when he speaks about it; and he himself has told us that "the English love a statesman whom they understand, or at least think that they understand." Liberal harmony is yet a great way off; but if the Conservatives persist in their food tax and their dabbling with a thinly disguised protection, they will fairly compel the Opposition to sink all minor differences. If this question should come sharply to the front, after peace in South Africa, Lord Rosebery might prove to be the best man to rally his party. In contending for unimpaired freedom of trade, he would not be, as he has appeared to be in his other recent attempts to resume the leadership in the unhappy position which his own pen has described—that of essaying the rôle of "pontiff of a church with the conviction of being in truth a heretic."

The Cobden Club has issued a leaflet on the subject of the bread tax, showing how this impost affects the poorest class in Great Britain. This is the "under-fed class," the dimensions of which in the United Kingdom are enormous. One-fourth of the town population are either in the plight of not having food enough to keep their bodily powers in good working order, or are on the border line between a sufficient and an insufficient supply. This appalling fact has lately been brought out by the researches of Mr. Charles Booth and Mr. Rowntree. Now the bread tax is estimated by the Chancellor of the Exchequer to produce about $13,000,000. But this does not represent the full amount that will be paid. The price of grain grown in the United Kingdom will be increased in the same proportion as that of the imported article. This will add half as much more to the burdens of the consumer, bringing the total up to $20,000,000. But this does not tell the whole story. The bakers are not going to pay this sum out of their own pockets. They will charge it over to the purchasers of bread, and the extra cost is estimated to be equal to half-a-farthing a loaf. As there is no such coin as a half-farthing, the extra charge to all who buy a single loaf—that is, to the very poorest class—will be a whole farthing. Therefore, the heaviest burden will fall upon those least able to bear it. This is what usually happens in the adjustment of taxes. The Cobden Club intends to fight against it, whether the war in South Africa continues or not, and not on the grounds of free trade merely, but for the welfare of the most helpless part of the community.

The regret at the announcement of M. Waldeck-Rousseau's resignation is lessened somewhat by the fact that he pronounces his work of conciliation to be accomplished. He accepted the Premiership in order to bring order out of the political confusion arising from the Dreyfus affair, and, now that order is restored, and as if to avoid the appearance of ulterior ambitions, he makes way for a successor. This, at least, is the reason for his resignation which the dispatches give, and it accords with the character of the man. It would be unwise, however, to speculate as to the new Premier until it is perfectly certain that M. Waldeck-Rousseau's resolve is inexorable. It is expedient, perhaps, to resign at a time when a political programme has been achieved, an electoral victory has been won, and a visit of President Loubet to the Czar is in progress; but these are considerations that would hardly weigh against a plain duty to the state. Whatever personal or political reasons have led to his retirement cannot, we are sure, be permanent. No man is indispensable, but he is as nearly so as any one man can be in French politics.

Naturally, the formal toasts to the French and Russian armies which were offered at the review held in President Loubet's honor, laid especial emphasis upon the pacific nature of the Dual Alliance. "This imposing force menaces no one," said President Loubet of the two armies which the Czar had declared to be brothers in arms. One may be glad that the fiction of a defensive alliance was held up, even while feeling that it is a fiction. Russia certainly is threatened by no other Power, and the alliance for her means either support in aggressive enterprises, or merely facility for placing loans. France, too, since the agreements concerning the Algerian hinterland, is threatened in no territorial interest. For her the alliance means either support in a war of her own making, or else the mere gratification of military vanity. The fact that Russia has not given, and cannot give, effective assurances of loyalty, we have frequently pointed out. Since the Franco-Italian *entente*, the Dual Alliance has become more than ever superfluous, even to France.

SENATOR HOAR'S SPEECH.

The speech on the Philippine question delivered by Senator Hoar on Thursday recalls the memorable effort made by the greatest of Republican statesmen on an occasion equally great, and on a subject closely akin to that which inspired the Massachusetts Senator. On the 16th of June, 1858, Abraham Lincoln, at Springfield, Ill., began his speech in these words:

> "If we could first know where we are and whither we are tending, we could better judge what to do and how to do it."

He went on to show that the American republic was like a house divided against itself, which cannot stand. He believed that the Government could not endure permanently half slave and half free. He did not expect the house to fall, but he did expect that it would cease to be divided. It would become all one thing or all the other. This speech was followed, somewhat later, by Mr. Seward's "irrepressible conflict" speech at Auburn, N. Y., in which the same idea was expounded at greater length. The truth which both these statesmen sought to impress upon the people was, that a republic dedicated to human liberty could not endure permanently if it should cease to practise the principles which it professed.

This was the theme upon which Senator Hoar held his hearers spellbound for three hours on Thursday. And yet we are told by the leading Republican organ in this city that it was "chiefly a rethreshing of old straw." Was it so, indeed? If the principles of the Declaration of Independence could be called old straw, then might Mr. Hoar's speech be considered a waste of words. If the battle of Thermopylæ is an idle tale, if the battle of Lexington is inconsequential, if every struggle for human rights since history began to be written and deeds of valor and self-sacrifice for country and freedom to be sung has been vain, then is the speech of the Massachusetts Senator to be classed as rubbish, from which no more nutriment for human souls can be extracted.

It was time that somebody who has the ear of the nation should sound again the note of liberty, and tell a forgetful people what it signifies in comparison with power and pelf. "You are fighting for sovereignty," said Mr. Hoar; "you are fighting for the principle of eternal dominion over that people, and that is the only question in issue in the conflict." This was in answer to the contention of Senator Foraker and others that we are slaying the Filipinos and practising the horrors of the Spanish Inquisition upon them merely to restore order. Everybody knows—it has been repeated a thousand times—that order could be restored by simply telling those people that we intend to give them their independence. But we have never said that. We have never said what we said to Cuba. Why not? Because some people thought that money could be made out of them. Others thought that it would be a fine thing to have ships and cannon there to match other nations in China, or to "dominate the Pacific." All these reasons meant pelf, direct or indirect. Nobody has ever yet made any money out of the Philippines, except army contractors; but if the island of Luzon were made of solid gold, nothing could ever compensate the American republic for overthrowing the liberty of a free people who never harmed us. It was time, we repeat, for somebody having the ear of the nation to ring this truth from the public belfry. Senator Hoar has earned the thanks of his own and of all future generations by performing this task in the way he did it.

What will come of it? we shall be asked. No man can say what shall be the final outcome—whether the Filipinos will be subjugated in blood, or the Americans be mired and strangled in their own riches. Of one thing, however, we feel assured. As long as the spectacle of oppression, tyranny, and cruelty exists in the Philippines, or elsewhere in the world, there will be men and women in the United States to rethresh the old straw of human rights. There will always be men to kindle the torch of liberty, and to do battle for the principles that Washington and Lincoln upheld. It is not for us to say who shall win in any coming election. A higher power will decide that question, but hope will always remain while men remain like Senator Hoar to tell the truth alike to willing and unwilling ears.

We have not sought to follow Mr. Hoar's argument, but rather to enter into the spirit of his discourse. The ability is not given to many to gather up the threads of a great and prolonged controversy, and present the whole of it in a compass brief enough to be grasped and held by ordinary minds. It is given to fewer still to seize hold upon the consciences and hearts of the multitude, and teach them to prize moral greatness above pelf and power. Senator Hoar has shown himself a master in both these great faculties. His speech will live as long as the controversy subsists out of which it grew, and it can never become stale while the love of liberty reigns in American bosoms.

ROCHAMBEAU.

The unveiling of the monument to Rochambeau, on Saturday last, recalls a story never heard by Americans without a thrill—the story of the aid which came from France at the turning-point of the War of Independence. It is this permanent sense of gratitude which lends to the reception of the French commissioners and of the descendants of Rochambeau a warmth and reality that such formal expressions of friendship often lack. The commander-in-chief of the French allies, it should frankly be admitted, was not one of the salient personages of the Revolutionary War. No opportunity was granted him for that display of ardent personal devotion which secured for Lafayette a kind of filial relation to the Father of his Country, hence a brotherly relation to us all; nor did Rochambeau receive the glory which redounds to Admiral Grasse for a single brilliant and decisive evolution. He stands, instead, as the representative of sheer military sagacity; patient, resourceful, as ready to coöperate unquestioningly with his American commander as to offer valuable counsel. Finally, he has the undying fame of having planned and secured that timely descent of the French fleet which brought the war to a dramatic close.

For a year he had an ungrateful part to play. Landing at Newport in July, 1780, he found himself condemned to complete inactivity. The second contingent which he had been promised never came; he was supported by a naval force inadequate and unaggressive; the French Ministry regularly refused his recommendations for money, ships, and men. For a year he did little more than win golden opinions for the discipline of his troops. Lafayette wrote to Washington, as a crucial instance of the good conduct of his fellow-countrymen, that the Newport chickens which fed freely in the French camp might be counted at night on the roosts. This was glory of a kind, but, after all, not much for a veteran of the Seven Years' War.

During all this time Rochambeau was in the position of failing to coöperate in Washington's cherished plan of a joint attack upon New York. At an early period he seems to have had an instinct that the final campaign would be, not on the Hudson, but on the Chesapeake. It gradually became plainer that the British were trying again, in somewhat different fashion, the plan of Burgoyne—namely, to cut off New England for subsequent conquest, as the most difficult, and, accordingly, to subdue gradually all the country south and west of the Hudson. It was therefore necessary to strike them in the south. Just who deserves the most credit for cornering Cornwallis on the peninsula between the York River and the James will probably be a matter of endless dispute; but this much is indisputable, that Rochambeau by his own efforts secured the indispensable aid of Admiral Grasse's squadron.

Those who love to qualify the word initiative with the epithet Anglo-Saxon would do well to study the movements of Admiral Grasse during the late summer of 1781. Under Rochambeau's earnest solicitation, he sailed from the

West Indies without sanction from the French Ministry; collected troops which he virtually borrowed from France's ally, Spain; in fact, took so many liberties with the programme laid down for him that he was obliged to serve notice that Cornwallis must be captured in two months' time, or not at all. If the stoical French General ever gave way to enthusiasm, it must have been on the day, August 14, 1781, when he informed Washington, whose command he had joined, that Grasse was already at sea, and headed for the two capes. It was, contemporaries say, one of the few occasions when Washington betrayed emotion.

How timely this aid was, need hardly be recalled. Rochambeau, after his juncture with the Continental army, had written: "Gen. Washington has but a handful of men. . . . This country has been driven to bay, and all its resources are giving out at once." Lafayette, whose scanty regiments alone opposed Cornwallis during those anxious months, had written to Washington that the troops were not enough even "to be decently beaten." The coming of Grasse put a different face on things; and from the time that the grizzled Saint-Simon placed his reinforcements at the disposal of the young Lafayette, the fall of Cornwallis was inevitable. The feeling of the French towards Washington is quaintly symbolized in an anecdote recorded by Col. Butler. The evening that Washington and Rochambeau, after their long march, joined Lafayette and Saint-Simon at Williamsburg, there was naturally a great dinner. "To add to the happiness of the event and evening," writes Col. Butler, "an elegant band of music played an introductive part of a French opera, signifying the happiness of the family when blessed with the presence of the father, and their great dependence upon him."

After the juncture with Washington, Rochambeau acted merely as an auxiliary, accepting loyally the subordinate part which His Most Christian Majesty had assigned to him. It was reserved for Lafayette and his Continentals to take the first redoubt with the bayonet, and for Lafayette to send back a proffer of aid to the leader of the French column, who had questioned the courage of the Americans. Yet when Louis XVI. ordered the official battle-painter to paint for Rochambeau two pictures—one depicting the siege of Yorktown, and the other the capitulation—it was more than a perfunctory compliment.

The sentiments which the inauguration of the monument to Rochambeau in Washington arouses are best expressed in terms of reminiscence. The enduring gratitude which the American people feel for him is quickened by the courtesies which have attended the preparation of the memorial, and by the ceremonies of the day. Rochambeau required no greater glory than to be the subordinate of Washington—the "auxiliary" of the General of "a handful of men." If there were choice of gallant service, would not one choose that which the stronger renders to the weaker's need? It is, then, a most happy coincidence that brought within a single week this commemoration and the installation of the republic of Cuba among free nations. The proudest title of our rulers, as it was of Rochambeau, may well be that of "auxiliary" to a brave and struggling people.

THE NEW CONGRESSIONAL APPORTIONMENT.

As the conventions for the nomination of Congressmen approach, attention is called to the fact that there is about a twelfth more districts under the new apportionment of Representatives in the House than under that which controlled the election of 1900. There will be, of course, a corresponding increase in the electoral college when the next President shall be chosen in 1904.

The Constitution fixed the number of Representatives when the first Congress should meet in 1789 at 65, and provided that thereafter the apportionment should be based upon the "respective numbers" of free persons in the several States and "three-fifths of all other persons," as determined by a national census to be soon taken, as it was in 1790, and every tenth year thereafter—each State, however, to have at least one, no matter how small its population. The first basis adopted was one Representative for every 33,000 people, which resulted in a House of 105 members. The variation from this standard was not very great for forty years, the ratio having risen only to one for every 47,700 after the census of 1830; but the growth of the country had been so rapid that the number of Representatives had considerably more than doubled, reaching then 240. At this rate it was clear that a body as large as the British House of Commons was to be expected in the not distant future, and a halt was called after the census of 1840. The standard was jumped up one-half to 70,680 people, and the number of Representatives was thus reduced to 223.

No House has had equal courage in the sixty years since that time, and the size of the body has steadily increased—at first slowly, as to 237 after the census of 1850 and 243 after 1860; and then rapidly—with the enfranchisement of the blacks after the civil war and the growth of the nation later—to 293 after 1870, 325 after 1880, and 357 after 1890. The last Congress resolved that no State should lose a member, and this required an increase of the total to 386. To prevent such loss by Maine and some other States, which are almost stationary in population, a ratio had to be adopted which permitted gains in twenty of the forty-five commonwealths.

The changes thus made constitute an interesting study in the distribution of political power. The Northeastern section of the nation—New England and the old "Middle States" of New York, New Jersey, and Pennsylvania, not counting Delaware, which has been long ranked as part of the South—gain 9 of the 29 new Representatives, 3 in New York, 2 each in New Jersey and Pennsylvania, and 1 each in Massachusetts and Connecticut, and will have 108 of the 386 members—almost exactly 28 per cent. The "Middle West," comprising the great commonwealths between the Alleghanies and the Missouri, gains 6—3 in Illinois, 2 in Minnesota, and 1 in Wisconsin—to which should be added 1 more for North Dakota. This will make their full number 106—or 120 if Kansas and Nebraska be ranked with this division, to which they most naturally belong—about 31 per cent. of all. The Rocky Mountain and Pacific Coast regions, including nine States of vast territorial extent but generally sparse population, will have 21 members—Colorado, Washington, and California each gaining one—6 per cent. of the whole body. There remain the sixteen States in which slavery formerly existed—the "Solid South," as they were for the twenty years beginning with 1876. These have 126 Representatives now, and are to have 136 hereafter—36 per cent. of the House, respectively one more member apiece for West Virginia, North Carolina, Florida, Mississippi, Louisiana, Arkansas, and Missouri, and a gain of three for Texas.

Analyzing these gains still further, it will be found that one-third of the increase is credited to what used to be the "Solid South," although West Virginia, which is to have five Representatives, has now a solid Republican delegation, and Delaware has long elected a Republican Congressman. These States in which slavery used to exist furnish almost exactly two-thirds of the Democratic party's strength in the present House—108 out of its 160 members. Leaving out of the account West Virginia, and also Missouri, which sends two Republicans from the city of St. Louis, the new apportionment will help the Democrats here. All of the other gains are in States like the Carolinas, Mississippi, and Louisiana, which have practically disfranchised the negro (the two North Carolina districts now represented by Republicans are accounted Democratic hereafter), or in States which send solid Democratic delegations without the necessity of amending their Constitutions to this end. The various boroughs of New York city now elect fourteen members, of whom eleven were Democrats in 1900, and that party should fare better with seventeen districts in this part

of New York State. The gain of population in Illinois has been largely in Chicago, which chose four Democrats and three Republicans in 1900.

Outside the old slave States, and New York city and Chicago, the gains of seats are chiefly in Republican sections, and they just about balance the increase of Democratic strength in those three quarters. Practically, therefore, the contest for control of the House is not materially changed by the new apportionment. The old slave States, New York city, and Chicago furnish almost exactly two-thirds of a bare majority of the present House, and their proportional strength will be almost exactly the same in the next Congress. The decision will still rest with the districts outside our two chief cities, in the long stretch of Northern States, above the Potomac and the Ohio, running from the Atlantic Coast to the Pacific—districts which gave the Republicans enough Representatives for a majority of 37 in the House elected two years ago, but the Democrats enough ten years before to run up their majority above 150.

THE POLICE FAILURE.

With his usual vigor of utterance, Dr. Parkhurst has told the truth about the conditions in the Police Department in the interview published on Friday morning, and by so doing has rendered still another valuable public service. There are those, we know, who will criticise him roundly for speaking out, and who will declare that such truth-telling is really in the interest of Tammany Hall. But common justice, as well as good policy, demands that the friends of good municipal government shall criticise Mr. Low's Administration when criticism is deserved, just as freely as Mayor Van Wyck was censured for the corruption and misgovernment to be found in nearly every department while he was in the City Hall.

When Dr. Parkhurst first attacked the police administration, in February last, he was properly criticised for not having given the Commissioner time enough to become acquainted with his subordinates and with the many grave problems which confronted him. No such objection can be made to-day. Nearly five months have now elapsed since Col. Partridge took office. In five weeks more one-quarter of Mr. Low's too short term will have passed. The citizens of New York are therefore eminently justified in expecting the completion of some reforms, the launching of many others, the ceaseless and rigorous prosecution of public offenders, and, above all, the enunciation of a strong and ringing policy which will carry conviction to the police and to the city by its very earnestness and clearness.

What is the actual condition of affairs at the end of the fifth month of Col. Partridge's headship of the police? In the opinion of competent and unprejudiced observers, police blackmail is unchecked, the patrolling of the streets is as much neglected as under Col. Murphy, the influence of Deveryism is rampant, and the discipline is as lax as last year. The Excise Law is for the most part unenforced; gambling-dens, disorderly houses, and policy-shops flourish unrestrictedly, except, as Dr. Parkhurst points out, where private individuals and societies have stepped in to do police work. Moreover, owing to the unchecked discussion of the three-platoon system, insubordination is rife throughcut the force. Competent observers at Police Headquarters and elsewhere testify that such complete demoralization has never been known as exists to-day. Worst of all is the total absence of leadership in the Department itself. One does not need to resort to Dr. Parkhurst's picturesque language to describe the lack of vigor, of personal aggressiveness and unconquerable determination, all the more missed because of the many admirable qualities, the high purpose, and the long public service of Col. Partridge.

The agitation for the three-platoon system is to-day the source of the greatest demoralization. When, under Tammany, a similar agitation was started in the Fire Department, and a captain in uniform at a public meeting advocated early adoption of the system, he was promptly tried and dismissed. Col. Partridge abolished the three-platoon system in February. Since that time, the entire police force has spent most of its time advocating a return to this arrangement. Men in uniform have gone from house to house begging signatures for petitions; officers have aired their views in print, criticising their commander, to the verge of insubordination. Policemen have been allowed, unpunished, to declare that the Commissioner was bent on making "slaves of his men." The patrolmen complain that they cannot approach the Commissioner or his Deputies in order to state their case, and that they cannot even reach the Mayor, despite the latter's proclamation that he would receive all complaints.

As to the Excise Law, the conflict between leaders of the Administration about its enforcement has done great injury to the entire Department. The men are for the most part ready to enforce the law, but they do not know whether the orders are to be obeyed or not. According to Mr. Jerome, the law must be obeyed, and he will punish all who do not see that this is done. In accordance with Mr. Low's smooth-sounding phrase—"the extreme of the law is the extreme of injustice"—each patrolman thinks that he is quite justified in overlooking violations by the saloonkeepers upon his beat. If Capt. Foody, recently on trial for not enforcing the Excise Law, should be dismissed, many policemen will think it little short of an outrage, since not even Mr. Low's later utterances constituted an explicit order to enforce the statute. As a matter of fact, policemen have been transferred apparently for no other reason than doing their duty in this respect. It is not right or proper that a subordinate should be punished for not doing something about which his superiors have persistently refused to define their attitude or to issue any clear-cut instructions.

That Col. Partridge has achieved some slight reforms must not be overlooked in any friendly and judicial summing up of his achievements and mistakes. He has abolished many sinecures, returned many loafers to active patrol duty, and has set a sturdy example of honesty and diligence. He has, moreover, placed several officials on trial, and some few of the lowest dives have been closed. But all this is as nothing compared to what an executive of genuine power could have accomplished. It is obscured by the fact that, *mirabile dictu*, Inspector Cross is Col. Partridge's chief adviser, that the Commissioner is getting no work or aid out of his other inspectors, and that the Devery captains flourish unconcernedly in their old positions.

In no carping spirit, but only with the sincerest conviction that we are speaking in his interest and in that of permanent good government, do we commend these facts to Mayor Low, and record our belief that prompt action is necessary if success is to be achieved where success is most needed. Only recently Mr. Low found a way to end an intolerable state of affairs in the Municipal Civil-Service Commission. The present deplorable police situation demands all the time and strength and political wisdom he can bring to bear upon it, for in the last resort the responsibility is upon his shoulders.

THE NEW PRESBYTERIAN CREED.

The "Brief Statement of the Reformed Faith" which was adopted by the General Assembly on May 21, was said by the committee which drafted it not to be intended as "a substitute for or an alternative of our Confession of Faith." Yet there can be no doubt that the new creed, as accepted, will supplant the old. It will do so immediately in the popular conception; it will do so gradually in the practice of the churches; and it will do so ultimately in Presbyterian law. There is no reason for delusions on this subject. The true issue before the Assembly was the substitution of a new confession of faith for the Westminster.

The first thing to be said about the alternative creed is that it exhibits a new kind of Calvinism. It may be called a polite Calvinism. For the rough-spoken style of John Knox, it substi-

tutes considerate language which would suggest to Col. Newcome his one classical quotation about the mollifying of manners. Best to exhibit the difference between the diction of the divines who feared not the face of man, and that of their more polished successors, we print in parallel columns some of their utterances on the same themes:

[From the Westminster Confession.]	[From the Revised Creed.]
"There is no other head of the Church but the Lord Jesus Christ. Nor can the Pope of Rome in any sense be head thereof; but is that antichrist, that man of sin, and son of perdition, that exalteth himself in the church against Christ and all that is called God."	"The Lord Jesus Christ is the only head of the Church, and the claim of any man to be the vicar of Christ and the head of the Church is unscriptural, without warrant in fact, and is a usurpation dishonoring to the Lord Jesus Christ."
"By the decree of God, for the manifestation of his glory, some men and angels are predestinated unto everlasting life, and others foreordained to everlasting death. These angels and men, thus predestinated and foreordained, are particularly and unchangeably designed. . . . . The rest of mankind God was pleased . . to pass by, and to ordain them to dishonor and wrath."	"Of Election.—We believe that God from the beginning, in His own good pleasure, gave to His Son a people, an innumerable multitude, chosen in Christ unto holiness, service, and salvation; we believe that all who come to years of discretion can receive this salvation only through faith and repentance."
"Works done by unregenerate men, although for the matter of them they may be things which God commands, and of good use both to themselves and others, yet . . . are sinful and cannot please God, or make a man meet to receive grace from God."	"We believe that God requires of every man to do justly, to love mercy, and to walk humbly with his God; and that only through this harmony with the will of God shall be fulfilled that brotherhood of man wherein the kingdom of God is to be made manifest."

Whatever the theological implications of the contrast, the gain in politeness is clear. The granite is covered with flowers.

A theological symbol like that now adopted must be studied in its bearing upon the questions which have been agitating the Presbyterian Church, and leading to heresy trials and withdrawals from its ministry. They are two. One of them is the doctrine of inspiration, involving the whole new province of Biblical criticism, and the other is the doctrine of eternal punishment. Now on neither of these does the new creed give a certain sound. Its phrases seem purposely vague. They are well fitted to include opposites, and to make a basis for a comprehensive Broad Church. The assertion about the Bible is that it is "the faithful record of God's gracious revelations," and "the only infallible rule of faith and life." Prof. Briggs would have assented to that heartily. So would every higher critic in existence. In the article on eschatology there is a similar vagueness. At the Last Judgment, says the new creed, "the wicked shall receive the eternal award of their sins." That leaves open all the old quibbles about *aionios*. Any one who believes in the annihilation of the wicked could subscribe to it. So could a restorationist. One has only to compare it with the explicit statement of the Westminster: "The wicked . . . shall be cast into eternal torments, and be punished with everlasting destruction from the presence of the Lord." We cannot greatly blame polemic Presbyterian doctors of divinity, of the older school, if they denounce this creed as so much Calvin and water, well fitted to give to the Presbyterian Church the theological attractiveness which Kinglake said that the Anglican Church had for him—namely, that of being "the most harmless going."

We would not, however, have it supposed that we consider the adoption of the new creed to be a mistake. It ought to be hailed enthusiastically by Presbyterians, it seems to us. For one thing, it comes somewhere near representing what the majority of them actually believe. This the Westminster Confession no longer does. Only ten days ago an outspoken layman expressed before the Assembly his happiness at the prospect of having a creed that he could both understand and accept. To the Presbyterian Church as a whole, the Westminster has ceased to be a living creed. It is not preached by the majority of the clergy; its more grisly parts are revolting to the vast body of the laity—if, indeed, the Presbyterian laity can be said to be aware of their existence. It has become a creed not to be championed but to be explained away. Now explanation of a creed, as Leslie Stephen has told us, is a common way of making it die. That process has so long gone on with the historic creed of the Presbyterian Church that, even in the judgment of its own members, it now waxes old as doth a garment. To lay it reverently aside, and to substitute for it in the working faith and life of the church a statement of Christian doctrine corresponding to actual beliefs, and freed from the old nightmares, was in fact seen to be the wise step to take.

HERBERT SPENCER'S MUSICAL HERESIES.

Mr. Herbert Spencer's new book, 'Facts and Comments,' concerning which he tells us in the preface that he can say with certainty it will be his last, contains no fewer than five chapters on musical topics. It is not the first time that the eminent philosopher has strayed into this field. Forty-four years ago he published an essay on the "Origin and Function of Music," which was really an epoch-making contribution to musical æsthetics and gave rise to an endless amount of discussion. Serious students of the art will therefore turn with eager expectation to the new volume—especially the chapters entitled "Some Musical Heresies" and "The Corruption of Music"—in the hope of finding further new and suggestive ideas; but they are doomed to disappointment.

One of Mr. Spencer's musical heresies is that the violin, currently called a perfect instrument, has two incurable defects—"the hiss of the bow, and the production of high overtones as it is drawn over the string." He believes that "the sounds of the æolian harp are far sweeter than those of the violin: which last, indeed, suggest the voice of a shrew in a good temper"! The obvious retort to this is that, while the æolian harp's tones may be sweeter, they are infinitely less capable of variety of sensuous coloring and emotional expression, and are therefore infinitely less valuable musically. As for "hissing" sounds, these are never heard when a number of violins play together. Yet it is against the violin in the orchestra that Mr. Spencer's wrath is directed. He protests that our orchestras are very defective because "in them the tones of stringed instruments so greatly predominate." Not only do they "yield the greater part of the sound," but their presence is continuous; "they are always making themselves heard."

Mr. Spencer was wise in prefacing the declaration of his "heresies" with the remark that his opinions "will not meet with acceptance among experts in music." Certainly every expert and every intelligent concert-goer will reject the opinions just advanced, for the simple reason that they are obviously and absurdly contrary to fact. It is quite true that the violins were too prominent and too persistent in the classical orchestra, up to Beethoven; but with Schubert began the modern system of orchestral coloring, which culminated in Berlioz, Wagner, and Liszt, and which gave so much prominence to the wind-instruments—wood and brass—that the strings actually had to be greatly increased in number in order to escape entire obliteration. Mr. Spencer, in a word, is topsy-turvy. He pleads for more of the very thing of which we have most. He complains of a lack of variety in orchestral coloring when, as a matter of fact, coloring has become almost a mania, and the charge must rather be made that too many composers sacrifice everything to it and become mere colorists. If Mr. Spencer had ever taken the trouble to attend a Wagner opera, he would not have written regarding our orchestras: "Beauty they can render; grace they can render; delicacy they can render; but where is the dignity, where is the grandeur?"

Equally antediluvian are Mr. Spencer's charges that in our music "the bass element is unduly subordinated." That was true a century ago; but Rossini began to write arias for the bass as well as the soprano, and since then all the great operas have had bass solos; while, as for orchestras and the pianoforte, the writing of a melodious bass is an accomplishment of every great master. What our philosopher

says about symphonies having no natural coherence is quite correct, and so is what he says about the impropriety of playing chamber music in a large hall. In the chapter on "The Corruption of Music" he dwells on the charge—as trite as it is true—that performers are too much given to the display of gymnastics for the sake of gaining cheap applause. But that is not a phenomenon peculiar to our time, and Mr. Spencer again betrays his lack of musical knowledge by singling out as a warning example the one performer of the nineteenth century who was less open to this charge than any other. "Many years ago," he writes, "when coming away from a concert given by a celebrated Russian pianist, I remarked, 'Too little music and too much Rubinstein!'"

Under the circumstances, it is hardly surprising to find Mr. Spencer championing Meyerbeer as an operatic composer, as against Mozart and Wagner. A woman pianist, at his request, counted the number of "scale passages" in the first twenty pages of the piano scores of three of Meyerbeer's operas and three of Mozart's. The result was that Mozart had 253 of these "mechanical successions," and Meyerbeer only 151; hence Meyerbeer cannot be especially accused of a lack of musical thoughts! This reasoning, surely, seems calculated for the columns of *Punch;* as also the statement that Meyerbeer succeeded in doing what Wagner tried to do without success—to "combine the two requisite elements in fine music—dramatic expression and melody."

A few years ago Tolstoy attended a performance of Wagner's "Siegfried," and, without staying to the end, or having any other acquaintance with Wagner's music, went home and wrote a savage attack on his art in general. Now comes Herbert Spencer with a criticism that is refuted in almost every page of every Wagner opera. The fact has been deplored a thousand times that anybody, no matter how little attention he may have given to music, thinks that he has a right not only to hold his own opinion, but to "lay down the law." With such eminent philosophers as Spencer and Tolstoy setting the example, how can we blame ordinary mortals for being foolish? It is very much to be regretted that Mr. Spencer has published the papers referred to. Perhaps, as he has promised that he may possibly make some additions to a future edition of his book, he will see the expediency of also making some omissions.

Mr. Spencer's doctrine that our vocal music was originally developed out of emotional speech is probably nearer the truth than Darwin's theory that musical notes and rhythms were first acquired by the male or female progenitors of mankind for the sake of charming the opposite sex. It may seem odd that a thinker should have been able to make what we have called an epoch-making contribution to musical æsthetics while now displaying such scant knowledge of the art of music. But the anomaly is easily explained. The origin of music is a scientific question, and therefore comes within the scope of Mr. Spencer's researches, while the questions discussed in the new volume relate to the concert-hall; and as a concert-goer, Mr. Spencer does not appear to have made good use of his opportunities.

THE ROYAL ACADEMY.

LONDON, May 5, 1902.

On Wednesday and Thursday of last week the Royal Academy was besieged by serious art critics, note-book in hand. On Friday, all afternoon, Piccadilly and Bond Street were blocked with the carriages of people crowding to the Private View—a social function from which nobody who is anybody can afford to stay away. On Saturday evening there was the annual banquet, attended by princes of the royal family, ministers of state, and men distinguished in literature and science. Every honor that form and ceremony can give is lavished upon an exhibition that, by a long-established tradition, has come to be looked upon as the official headquarters of British art. But art cannot live on form and ceremony alone, and the exhibition itself only seems the more incredibly commonplace because of the importance given to it. To look at the walls is to ask with amazement the reason for the pretty compliments exchanged in the after-dinner speeches on Saturday evening. Beyond the eight Sargents, two or three other portraits, perhaps half-a-dozen landscapes, and a few things in the sculpture room, there is little that deserves a second glance. And the worst of it is, that the New Gallery, of late little more than an annex to the Royal Academy, now confesses its weakness by giving over its central hall—usually devoted to sculpture—to a show of Japanese lacquer work as a sort of advertisement for a Bond Street tradesman.

That, under these circumstances, Mr. Sargent should tower head and shoulders above his fellow-exhibitors, is not surprising. In the mere matter of industry and power of production he is infinitely their superior. It has been a reproach before now that the modern artist in England is, physically, but a weakling compared to the giants of old, men like Rubens and Tintoretto and Veronese, who thought no more of covering a whole wall with an elaborate composition than most painters do, to-day, of making a slight sketch on a small canvas. But Mr. Sargent cannot be classed among the weaklings. He has his full allowance of eight pictures at the Academy, and, of these, two are large groups of three figures; at the New Gallery he has another group of three, a huge landscape as background to a single figure, and a third portrait besides. There is, of course, no special merit in quantity. But Mr. Sargent is unusually good, as well as unusually prolific, this year.

The most ambitious of these eleven canvases is the portrait at the Academy of "The Ladies Alexandra, Mary, and Theo Acheson." It repeats, in a measure, the experiment of two years ago. Again three sisters are his sitters, and again they wear white. But instead of a room for background, there is a garden, and they are grouped about a great vase, under an orange tree. One sister stands to the left, her slender white arms lifted as she picks the fruit; a second sits below, in front of the vase, a few oranges gleaming through the white draperies she is holding up—and a wonderful bit of painting this is; the third stands to the right, an amused spectator. The scheme of white and green is relieved by a touch of blue in the dress of the sitting figure, in the black of the ribbons and hat of the figure to the right, and by the orange of the fruit. The faces are full of animation, the dresses are put in with a dexterity that Mr. Sargent is at no pains to conceal. The whole picture is full of a vivacity, a vitality, simply amazing compared, for example, to the woodenness of Mr. Luke Fildes's portrait of the King—a lay model draped with robes of ermine and velvet, surrounded by symbols of royalty—which hangs in the chief centre of honor, in all the pomp of golden hangings; the one picture allowed the luxury of a margin of space around it. Or if you turn to Mr. Dicksee's effigy of a lady in gold-embroidered robes set amid silken cushions, or to Sir Laurence Alma-Tadema's gentleman who serves as motive for a study in still life, or to the other Academical masterpieces, it seems absurd to find any fault with Mr. Sargent, the one painter among them all. But place his group in worthier surroundings, and I think its animation would seem a little over-emphasized. I should weary of the set smile on the three faces, of the upstretched arms, of the hands holding out the drapery for the fruit. And there is something as artificial in the composition: it savors of the studio and studio combinations; the figures do not belong to their surroundings, but these are made for them because Mr. Sargent apparently wanted to see what he could do in the "grand manner," wanted to try a modern adaptation of eighteenth-century conventions. In the great portrait groups of the world you are never oppressed by the animation of the figures; in the greatest of all there is complete repose, as in those wonderful old men and old women of Franz Hals at Haarlem, or in the Syndics of Rembrandt, for instance.

Mr. Sargent is as artificial, though in another and very different way, in the second group at the Academy, "The Misses Hunter." In this, too, he has had three sisters to paint, but he has endeavored to give them at least a natural air. Only one wears white; the other two, black. They sit round a divan in the centre of a room, behind them a Japanese screen. The perspective is violent; the voluminous skirts, in falling, make a wide circle on the floor, repeated in the smaller circle formed by the grouping of the three heads above the divan; and, in the background, as if to balance the curves, rise the rigid upright lines of the screen. You cannot look without feeling how much Mr. Sargent was preoccupied with the difficult, almost geometrical problem of lines and curves, without being impressed by the cleverness with which he has solved it. But the last thing you want to see in a picture is the painter's

cleverness, and here, it seems to me, he has sacrificed everything to a display of technical skill, even all vestige of character in the faces. The smile of the three sisters has the effect of having been lent to them for the occasion.

Really, Mr. Sargent's most successful group is at the New Gallery—"The Children of A. Wertheimer, Esq." Here the figures convince you that they do belong to their surroundings. Mr. Sargent might have come upon them so at any time; they are not merely arranged because his easel happens to be before him and his palette in his hand. They are in a room—no doubt a school-room—bare of ornament, save a wonderful globe you can see it was a delight to Mr. Sargent to paint. And there is character in every pose—in the easy grace of the girl of seventeen or eighteen lounging on the sofa, her trailing skirts touching the floor; in the alertness and rich Oriental color of the younger girl, leaning over an ottoman; even in the languid affectation of the boy in Eton jacket and collar, curled up below, though I doubt if an Eton boy ever had such ladylike fingers. There are three dogs, one the famous poodle, each as carefully studied, and the great beauty is in the magic of the atmosphere which envelops the figures, keeping them well within the picture. In the Academy groups the relation of the figures to their backgrounds is less well observed. There has been a good deal of talk about the large landscape in the New Gallery, a Norwegian stream with a youth, in fishing outfit, lying on the stony shores. Mr. Sargent has painted the water running away from him, a wonderful thing to do, it is said. But the picture is without air or light. It has the look of a sketch Mr. Sargent might have made in his studio on this huge canvas because nothing smaller was at hand.

For his most completely successful, if less ambitious portraits, you must return to the Academy—"Lord Ribblesdale," a full-length of a tall, slight, nervous man, in riding dress, standing against a gray wall, with character not only in the face, but in the folds of the breeches, the fall of the coat, the twist of the neckerchief, the very way the silk hat is set on the head; and "Alfred Wertheimer, Esq.," once more an extraordinary realization of the Jewish type Mr. Sargent loves. His other five portraits are of women in more or less gorgeous gowns—clever, I need not say, but not quite so striking.

If I have given so much space to Mr. Sargent, it is because it would be impossible not to; he dominates Academy and New Gallery both. The other portraits, with a few exceptions, may be divided into two classes: those that would rival photographs in uninspired accuracy, and those in which the sitter serves as the merest suggestion for a decorative scheme. An honest photograph would be preferable in the one case, a frank decoration in the other. Among the few exceptions, the most remarkable is a portrait of Mr. Phil May, by Mr. J. J. Shannon, who, as a rule, is too ready to sacrifice a genuine talent to the fashions of the day. But in painting the distinguished illustrator, he has forgotten decoration and been content to show the man as he is. The portrait is a half-length. Mr. May wears a red hunting-coat. He holds a half-smoked cigar in one hand, his hat in the other. The figure is well placed on the canvas, and the head is studied and painted with a sympathy that saves it from being too literal in its straightforward realization of type and character. It is interesting to see Mr. Swan, the sculptor and animal-painter, making his first appearance as a portrait-painter. One of his attempts does not justify this new departure, but in the other, though you are conscious of his timidity and hesitation, though he has not had the nerve to paint the man inside the overcoat, the head is modelled with so much tenderness and insight that one will look forward with curiosity to his next experiments of the kind. Signor Mancini, the Italian artist, who uses his paint almost as if it were clay, but who often produces fine effects despite his indifference to beauty of surface, has been given a place, owing, it is said, to the influence of Mr. Sargent, his admirer. But, having admitted him into their midst, the Academicians, with their accustomed indifference to or fear of foreigners, have not had the courage to hang him appropriately, and his lady, sitting on a golden-draped couch, cannot be seen from any point of view. Two portraits of men, restrained, quiet, but rather ineffective, by Mr. Orchardson, complete the list.

Mr. Orchardson has another picture, "The Borgia," that explains his charm and his limitations. He has represented the end of a banquet, when one of the Borgias lingers in his chair, the guests departed, to watch his victim who has fallen half across the table, the fatal glass upset before him. The banquet has been served in a garden, under the stone pines that make a cool shelter from the Italian sun. The composition is amusing, the table running down the middle of the picture in abrupt perspective. The detail of cloth and fruit, plate and glass, and empty chairs, is delightfully painted; while, for once, Mr. Orchardson has abandoned the curious yellow color which seems, it was once said, to represent the color of his mind. But when it comes to the drama of the picture, what should be tragedy is the merest ineffectual comedy. The man lying across the table might be in a drunken stupor, but for the title. The anecdote, you feel, has been dragged in to satisfy a public that expects anecdote. The astonishing thing is that British artists who are at such pains to tell a story in paint, should almost always tell it with an appearance of insincerity and indifference. However, this year, among the pictures of the kind—religious, sentimental, historical, or comic—none other calls for comment. Mr. Abbey sends no large painting, but instead one of his graceful pen-drawings, "Tho' Amaryllis Dance in Green." Mr. F. D. Millet, however, deserts his little old ruins for a great stretch of canvas, on which he represents the manner of "Proclaiming the King" in the village of Broadway. But he is not at home as yet in designing and painting on this colossal scale, or in dealing with such a mass of figures.

A few landscapes have charm. Far too many are achieved in the Academical spirit—empty designs, made to fill canvases much too big for them, so that their emptiness becomes all the more obvious. But here and there you come upon a little unpretending picture by a man who has felt and observed the facts and effects of nature for himself. To Mr. Edward Stott, for one, Nature is full of poetry, sometimes when the sun shines its gayest at noon, sometimes when day fades into evening with tragic tenderness; and it is this solemn hour between day and night that he has painted this year in his most successful picture, "Peaceful Rest." Twilight has fallen on the low pastures below the cliffs, within sound of the sea, and the sheep are wandering by the banks of a curving pool, while the shepherd sits down to light his pipe. The sudden flame in the blue night is the motive for the harmony, its effect the problem the painter has set himself. Mr. Clausen is another landscape man whose work shows signs of personal observation and personal feeling. His "Homewards" is also a study of evening light, but in the golden moment before dusk, when upon the weary laborers and their horses, as they leave the fields, the light of the setting sun falls, turning now the old trousers of a boy, now the legs or tail of a plodding horse, to gold. There is also one of M. Thaulow's wonderful effects of snow and ice—a Norwegian mill in winter, already shown at the Salon. And if I mention Mr. Arthur Lemon's spirited horses on a wind-swept upland, I think I have exhausted the list of pictures which the conscientious American coming to London need look for on the overcrowded walls of the Academy.

The sculpture has often been better in past years. There is little of note. Mr. Gilbert is not represented, and this means a serious loss. Mr. Frampton, who has just been elected a full Academician, makes but an indifferent showing. Mr. Alexander Fisher, whose enamels are so often very beautiful in color and design, breaks out in a huge allegorical bronze arrangement for a chimney-piece, with a bit of verse tagged on, that is unexpected as it is disappointing. However, there are a fine "Wounded Leopard," by Mr. Swan, and a bronze group of a "Boy and Bear Cubs," both more graceful and distinguished in line and composition than his much smaller "Polar Bears" in silver. A pathetic little outstretched figure, called "Snowdrift," is all the more pathetic as the last work completed by Onslow Ford, just before his death in December.

Correspondence.

MARY DYER.

To the Editor of The Nation:

Sir: The tragedy of Mary Dyer, who was hung on Boston Common in 1660 for being one of those people called in scorn Quakers, must always glare from the annals of the early Massachusetts colony. A woman of attainments above the average, the wife of a leading man in the neighboring plantation of Rhode Island, the mother of a large family, and a person of acknowledged exemplary conduct, her experience at the hands of the Massachusetts authorities stands out as shockingly brutal, even though inflicted at a time when persecutions of Quakers were carried to extremes. Returning from England to Boston in 1657, she was imprisoned because the magistrates were incensed at the conduct of the Quakers. Released on condition that she would not lodge or speak in any town of Massa-

chusetts, she remained in Rhode Island until June, 1659, when William Robinson and Marmaduke Stephenson, both Quakers, were thrown into prison in Boston, and she felt a call from the Lord to visit them. The authorities, Endicott and Bellingham, arrested her, and it was to secure his wife's release that William Dyer wrote the letter now printed for the first time. Released she was, with her fellow-prisoners, but all were banished from the province on pain of death should they return.

The subsequent history of these three persons is among the well-known stories of New England. How they did return, in response to what was to them a call from on high, and how Robinson and Stephenson were hung in the clumsy manner of the day, while Mary Dyer sat under the gallows tree, with a rope round her neck and expecting to suffer the same penalty; how the torture of seeing her friends strangled was prolonged by making her mount the ladder, blindfolded, only to be saved from death by a reprieve determined upon days before the date of execution—could the details of such a story be heightened even in imagination? Again sent out of the colony, she once more returned, to find that her judges had in the meantime grown merciful—they hung her without torture.

This letter throws much light upon the attitude of the Quakers and the manner of arresting Mary Dyer. It is now in the collections of the Boston Public Library.

WORTHINGTON C. FORD.

BOSTON, May 5, 1902.

Gentlemen

hauing receiued some letters from my wife, I am giuen to vnderstand of her Comittment to close prison, to a place (according to description) not vnlike to Bishop Bonners roomes not a place to sitt or lye upon butt dust. It is a sad Condition that New England professors are come unto, in exersising such Cruelties towards their fellow creatures & sufferers in old England upon the same acount. Under the bishops as yo^r^ selues now, had you no comiseration of a tender [*eaten out by m ce*] that being wett to the skin you cause her to be thrust into a Room whereon was nothing to [*eaten*] or lye downe but dust (as is s^d^) hadd yo^r^ dogg been wett you would haue afforded it the [*eaten*] of a chimny corner to dry it self, or had yo^r^ hoggs been pend in a sty you wold haue afforded them some dry straw, or els you wold haue wanted mercy to yo^r^ beast, but alas Christians now wth you are used worse than hoggs or doggs oh merciless Crueltie, & what doth euince but a rateficacoñ of that booke lately come ouer to M^r^ Cunnigraue from his wife in England intiteled the Popish inquisition exerted in N England, w'th how then. & how may bee resented by the supream Authority of England & its dominions time will declare, & I beleeue you will be made sensible of, the carriages therein exprest doth relent the harts of the rudest of men, besides abhominating the carriages of men called magistrats in y^e^ seat of justice, w'thall relating that you haue done more in p'secution in one yeare then the worst bishops did in seeuen, & now to add more towards a tender woman in y^t^ condition, that gaue you no just cause against her; for did she come to yo^r^ meetings to disturb them as you call it, or did she come to reprehend the magistrats: only came to visit her friends in prison, & when dispatching that her intent of returning to her family as she declared in her [*eaten*] the next day to the Go^r^, therfor it is you that disturbed her. else why was she not lett alone [what] house entred she to molest or what did shee, that like a malefactor she must be haled to [prison] or what law did she transgress? she was about a business justifiable befor god & all good men; [euen] the worst of men, the bishops themselves denyed not the visitacoñ; & Releife of freinds to their [*staines*] vers, w^ch^ my self haue oft experienced, by visiting M^r^ Prine M^r^ Smart & other eminent [*stained*] when he was Commanded close in the tower, I had resort once or twice a week, & neuer fetcht befor Authority to ask me wherfor I came to the Tower, or Kings bench, or Gate house; sure it argues yo^r^ selues, little to practise that duty when you were ther in England, and men had ther not euen more aduenterous tender harted professors then yo^r^ selues many of them you call godly ministers and [many?] might haue perisht for ought I know, & doubtless the authority ther might quickly haue [filled] the prisons w'th such as came upon such arrants out of a tender conscience; if that course you take had been in use w'th them, as to send for a person, & ask them wherfor they came thither. what hath not people in America the same liberty as beasts & birds haue to pass the land or ayre w'thout examinacoñ, or are you of the fearful mind as the barbarous Chinensis, that wold nott permit others to come into their Country because ——

And when she had declared her business then for those that sitts in the seat of justice to charge her she was a quaker: what a judge & an accuser both just as did the Spanish inquisitors in Spaine to M^r^ Lithgow, You are a spie, say they notwithstanding he shew'd his Comissions. butt ipse dixit, a spie they say he was, & into such a like place as you haue putt my wife, so did they thrust him, & did not giue him so much as straw to lye on but kept him close according as my wife writs me word, & informacoñ, y^t^ she had ther been about a fortnight & had not trede on the ground, but saw it out at y^e^ windowes: what inhumanity is this, had you neuer wiues of yo^r^ owne; what can man y^t^ is borne of a woman, or euer had any tender affecoñ to a woman, deale so w'th a woman, what is nature forgoten, if refreshm^t^ be debared, butt Benningfoold the Lady Elizabeths dogged keeper wold admitt the Liberty of the garden to her though a condemn'd Heretick, as they called her, oh cruell unheard of dealings, wher was her accusers that she was a Quaker, only M^r^ Bellingham, a magistrat & an accuser what hath magistrats (in the simplicity of justice) to doe to make inquisition upon persons, innocent persons, y^t^ is brought before them, or what president is ther but the Romish inquisitors & the Bishops' oath ex officio, for did she not say when she had finisht her visitacoñ of friends, her business was done for ought she knew & so shuld returne to her family, but some of you wold charge her to come to foment her errors, wisdome wold haue staied till some svch thing had been done, that so some colorable transgression might haue appeared for proceedings, & not vpon yo^r^ owne suggestions to draw up & stuff a mittimus w'th

All y^e^ standers by could not but [*illegible*] by their silence being appealed vnto, y^t^ she gaue a good account of her coming, & y^t^ she said no such things as you exprest in yo^r^ first mittimus, a copye of w^ch^ I haue also to be declared in time, and bee sure such proceeds will be clothed in Roman Buff. It is not to be forgotten the former cruelties you used towards her when she came from England, hauing been tossed at sea, all the winter, bvt a little refreshm^t^ they had by cross winds at Barbadoes, yett as soon as come into Harbor shvt vp into a prison, & there kept [*here follow three lines which have been carefully obliterated*] for no transgression at all, only M^r^ Bellingham then as now said she was a quaker, just as Bonner, Gardiner, and y^e^ rest of y^t^ Bloody Crew said to the poore saints in St. Marys [*illegible*] they sent their bloodhounds about, (as Waitt was) w'th their euerlasting Comission to spie out & bring them before their thrones, Comonly the first or second word to them was, you are an Heretick; but it may be those dayes are forgotten, yett surely you or some of you. if euer you had the courage to look a Judges[?] in the face. cannot but remember that the 1-2 or third word from them was, You are a puritane are you not, and is it not so in N. England. The magistrats hauing contrary to gods Law assumed a Coerciue power ouer the Conscience, the first or next word after appearance is You are a Quaker. See the stepps you follow, and lett their misery be yo^r^ warning; and then if answer be not made according to the ruling will: Away w'th them to the Colehole, or new prison, or house of Correction, and neuer any of the three ages, haue wanted rayling scurilous termes, to make the innocent saints odious in the peoples eyes, espetially when they are not able to gainsay their righteous proffession, and all borrowed from y^t^ nurserie of Deuils, the persecutors of the Waldenses: And now Gentlemen consider their ends, & believe it, itt was Certaine the Bishops ruine suddenly followed after their hott pursuance of some godly people by them calld Puritans, espetially when they proceeded to suck y^e^ blood of Doctor Laytons and G Lillbornes backs (no more do they rend they proceeded to whipp) & the blood of M^r^ Prin M^r^ Burton & Doctor Bostwicks eares, only them three & but three, & these were as odious to them as the quakers are to you; and let me appeale to yo^r^ owne consciences, & to yo^r^ owne [*eaten*] ouer two witnesses came against any person you haue eythere prisond [*eaten*] sworne they were quakers, or a quaker, but as yo^r^ brests conjectures so must [*eaten*] this in Generall, & now in particular, do I demand what wittness, or whether Legally testimony [?] was giuen or taken that my wife Mary Dyre was a quaker, if not before god & man how can you clear yo^r^selues & seat of justice, from Cruelty persecution yea & so farr as in you lies murder as to her & to my self & family oppression & tiranny. the god of truth knows all this, & beleeve it is in Remembrance w'th him & of you twill be requir'd, who haue kept her to the uttmost that is to this present court or sitting to bring her into or vnder the capacity of yo^r^ Cruell Law of Banishm^t^, and this is the summa totalis of yo^r^ Law titled Quakers: That a Law tittled Quakers shuld be a law is that she is guilty of a breach of a law tittled Quakers is as strong, that she is lawfully conuict by 2 witnesses is not yett heard of, that she must be banished by a law tittled Quakers being not conuicted by law, but being conuented [*i. e.*, summoned for trial] by surmise & condem'd to close prison by M^r^. Bellinghams suggestion is so absurd & ridiculovs, that the meanest pupill in law will hiss at such proceeds in old Lawyers. What branch of the law tittled quakers hath she broke or will you say she is vehemently suspected to be a quaker is your Law tittled Quakers Felony or Treason. that vehement suspition renders them capable of suffering Looke now upon all the Tirannicall & persecuting gouernmts in the world, & giue the like instance, & it may appease, butt for my owne p^t^ I never heard or read of any: To Rome I being an Englishman & knowne not to be of their profession, yea to be a protestant, & may see & visitt, & yett not banisht because I am suspected to bee a protestant, & now you that profess the Law of god is yo^r^ Rule, where yo^r^ Law or Rule to keep a man's wife from him 7 or 8 weeks, & a mother from her children, in a capacity of close prison, w^ch^ Admitts of no Baylem^t^, is not this yo^r^ endeauo^r^ & fact of a diuorcem^t^ what you may, & is not this little less then murder by yo^r^ owne Catechismes to bringe in a guiltless person into a little chamber in such a contagious time as god shakes his Rod ouer you in, & hath not ofered her the benefitt of the fresh ayre, truly this is a non pareille. and that she has broke no Law yo^r^ mittimus do suffitiently wittness: w^ch^ s^th^ [sheweth] by virtue hereof you are to take into yo^r^ Custody the person [*eaten*] who upon examinacoñ before authorytie professeth her Coming into these parts was to visit the prisoners [*eaten*] account of her Comming. haue you a law or doth yo^r^ law tittled Quakers prohibitt any from visiting such as you call Quakers in hold, (besides she asked not to go in to them, but stood w'thout the doors all in the raine till she was wett to the skinn) then had you had some Colour, & yett her ignorance of that Law or clause had ther been one, might haue pleaded a suffitient excuse for the first time amongst mercifull men, 2^ly^ yo^r^ mittimus s^th^ that she profest her self of the same Religion that Humphrey Norton was of, I dare ingage 500^l^ she neuer spake such a word, but that she might say H. N. was in the truth I deny not, yett. haue you a law to committ such to close prison as shall say they were of H: Nortons Religion: 3^ly^ that she refused to give a direct ans: to what was proposed to her on any other occasion, you might as well w'th the Hiepreests condemn o^r^ sauio^r^, besides that sauo^rs^ too much the oath ex officio: so much formerly dam'd by yo^r^ owneselues 4^ly^ for affirming the light w'thin her to bee the Rule, haue you a Law that saith the light in M Dyre is not M: Dyre's rule, if you haue for that or any the fornamed a law, she then may be made a transgressor for words, & yo^r^ mittimus hold good, but if not, then haue you imprisoned her & punisht her w'thout law & against the Law of god &

man, I mean yor selues, for if you be men, I suppose yor fundamentall lawes is yt no person shall be imprisoned or molested but upon the breach of a Law, & yett behold my wife w'thout Law & against law is imprison'd & punisht & so hiely punisht as intended to a stepp next unto death, and yt for wch you practise yor selues in part, as, she is condem'd for saying the light in her is the Rule! Is not yor light w'thin you yor rule by wch you make & act such lawes, for yee haue no Rule of gods word in the bible to make a law tittled Quakers, nor haue you any order from yor Supreme State of England to make such Lawes, Therefore it must be yor light w'thin you yt is yor Rule you walk by, and then Remr what Jesus Christ sth If the light that bee in you is darknesse how great is that darkness, The lord of his grace dispell it from you that yee may come to see and say as Adonibezeck did three score & ten kings hauing their thumbs & great toes cutt of gathered their meat under my Table, as I haue done to others so God hath done to me and they carried him to Jerusalem & ther he died: I have written thus plainly to you, being exceeding sensible of the unjust molestation & detaynmt of my deare yoke fellow [*illegible*] & my family as want of her will urge Loud in yor eares together w'th her sufferings of yor part but I question not mercy fauor & Comfort from the most high to her owne soule, though at present my self & family bee by you deprived of the Comfort & Refreshmt we might haue enjoyed by her so sth

her Husband

W: Dyre

Newport this 30th august 1659

Addressed: To the Courte of Assistants now assembled att Boston this 6th Septemb Ano 1659

Endorsed: To ye Court of Assistants d'd into ye Court by his wife M: D: 7 7mo 59.

A CLERICAL PROTEST.

To the Editor of The Nation:

Sir: Those who watch with grim alarm the fatty degeneration of the national conscience, can but find added cause for concern in the communications which have recently passed between the Bishop of Massachusetts and the President.

The Bishop and clergy, in diocesan convention assembled, sent resolutions to the President expressing confidence in the Administration, and condemning the cruelty in the Philippines. These resolutions and the President's reply are rare reading. Time was when Americans did not so naïvely stultify themselves, but that time is past. With one hand the Bishop and clergy express confidence in the policy of the Administration, and with the other condemn certain specific acts to which that policy has inevitably led. But what fellowship hath light with darkness, and when did men gather from thistles figs? How the devil must laugh in his sleeve; for could the Prince of Darkness ask for better advocacy than an expression of confidence in his Administration with a condemnation of a few specific acts? Would it not be well for these reverend gentlemen to pause and consider whose followers they really are? His who sternly refused the offer of all the kingdoms of the world and the glory of them (notwithstanding the opportunity for missionary work which they doubtless afforded); or his who claimed temporal power, or its simulacrum, as one of his strange prerogatives? No wonder the pulpit is ineffectual when its ministers are double-minded.

The clergy of nearly all denominations seem to be Imperialists because, forsooth, the Philippines will be so fine a field for missionary labor. Do the reverend gentlemen remember the injunction, "Thou shalt not do evil that good may come," and that the only effective teaching is done, not by precept, but by example? The lessons we have taught the Filipinos they will execute, and will surely better the instruction. Lying, trickery, treachery, cruelty—these have been our admirable object-lessons, demonstrated by easy and sure stages; and the Malay race, with whom revenge is almost a religion, will lay them to heart.

When for thirty pieces of silver, or twenty millions of dollars (the price is nothing, the principle is all), we bought and betrayed innocent blood, sold our national honor, and again wounded truth and justice in the house of their professed friends, we sealed our lips and tied our hands against any real missionary labor. Now our true missionary work lies at home, in trying to take the beam out of our own eye; in striving after that courage which calls things by their true names, which judges righteous judgment, and which detects the greed, hypocrisy, self-seeking, and vain-glory which lurk behind the specious words "patriotism" and "expansion." An Episcopalian.

May 25, 1902.

WATER-TORTURE.

To the Editor of The Nation:

Sir: If any of your readers cares to read a heart-sickening account of sufferings under the water-torture and other "devildoms of Spain," by one of the victims, he can find it in William Lithgow's 'Travels and Voyages' (Leith, 1814). The details are too horrible for reproduction. He may also find further particulars in the 'Narrative of the Cruelties of the Dutch at Amboyna' (London, 1624). Having read these, he will understand the kind of lessons that are being taught our young men in the Philippines.—I am, sir, etc., W. H. B.

May 23, 1902.

A SOWING OF CADMUS.

To the Editor of The Nation:

Sir: Essay-writing is becoming easy nowadays, if we may judge by a recent instance. "The Dragon's Teeth," by Agnes Repplier (on bad spelling), in the *Outlook* for May 10, is a mere paraphrase, so far as title, subject, and about one-half of the material are concerned, of an article called "Our Curse from Cadmus," by Margaret B. Wright, in the London *Temple Bar* for May, 1898.—Very truly, C. H. C. W.

Harvard University, Cambridge,
May 22, 1902.

THE BRITISH ACADEMY.

To the Editor of The Nation:

Sir: Your correspondents appear to have overlooked the Rev. Joseph Hunter's "Account of the Scheme for Erecting a Royal Academy in England, in the Time of James the First," read before the Society of Antiquaries in 1846, and published in *Archæologia*, vol. xxxii., pp. 132-49. G. L. K.

Cambridge, May 20, 1902.

Notes.

It is proposed to give American students and lovers of the Rev. Stopford A. Brooke an opportunity of contributing to the fund, partly raised, to establish a lectureship in poetry bearing his name, and already begun by courses from himself. A committee has been appointed, and all those who care to express, even by a moderate contribution, their regard for and appreciation of what Mr. Brooke has done for English literature and for its students in America and England, have an opportunity of coöperating with his friends in England. The amounts of subscriptions are not to be publicly announced. Checks may be sent to R. W. Gilder, No. 33 East Seventeenth Street, New York.

We may at the same time remind our readers that the R. D. Blackmore Memorial Fund is not yet closed. The form agreed upon for the memorial was a marble tablet in Exeter Cathedral, and any moneys remaining after this is paid for are to be turned over to the Authors' Benevolent Fund established last year in connection with the Society of Authors. American admirers of 'Lorna Doone' and the late Mr. Blackmore's personality can remit their contributions, however small, to Mr. Albert H. Whitin at Whitinsville, Mass.

The Baker & Taylor Company will issue in the autumn 'Reminiscences of a Long Life,' by the venerable Theodore L. Cuyler, D.D., of Brooklyn, now in his eighty-first year.

The concluding volume in Messrs. A. C. Armstrong & Son's "Book-Lovers' Library" is to be, 'How to Make an Index,' by Henry B. Wheatley, certainly a desideratum for a larger majority of authors and publishers.

Bliss Carman's Ode on the coronation of King Edward will be published attractively on June 1 by L. C. Page & Co., Boston.

The first emotion aroused by the sight of Mr. Charles Eyre Pascoe's book on 'The Pageant and Ceremony of the Coronation of Their Majesties King Edward the Seventh and Queen Alexandra' (D. Appleton & Co.) is one of surprise that a celebration of a few hours should provide material for a volume of 290 pages. The author, however, ekes out the bare coronation-day programme by digressions and quotations on all sorts of subjects that have anything to do with royalty, as well as by obeying that never-failing maxim for the journalist in need of copy—"When something happens, describe how the same thing happened before." It is Mr. Pascoe's special desire that those Americans who find seats reserved "for themselves or their ladies" in Westminster Abbey will take his book along with them, "and there beguile the tedious time of waiting by looking over its pages." This is not, perhaps, very likely; but it is quite true, as he goes on to say, that "it ought to inform some of a good deal they do not know," for it brings together a great many curious and interesting historical facts outside the scope of the ordinary text-book.

'The Bairn's Coronation Book,' by Clara Bridgman (London: J. M. Dent & Co.; New York: Dutton), is an ultra-loyal interpretation of the same event for the benefit of undeveloped intelligences.

The Military Historical Society of Massachusetts, which owes so much of its prosperity and usefulness to the loving interest of the late John Codman Ropes, has recently published the eleventh volume of its Papers, containing a timely account of "Operations against Cuba and Porto Rico, 1595-1762," by Capt. Stockton, U. S. N.;

"The Naval Side of the Revolutionary War," by Capt. Goodrich, U. S. N.; "The *Constitution* at Tripoli," by Professor Hollis of Harvard; "The Fight between the *Constitution* and the *Java*," by Lieut. Soley, U. S. N., and three articles by Commander J. G. Eaton, U. S. N., "The *Chesapeake* and *Shannon*," "Perry's Victory on Lake Erie," and "The Last Exploit of *Old Ironsides*" (the capture of the *Cyane* and *Levant* by the *Constitution*, under Capt. Charles Stewart, the most brilliant small affair in naval history). In addition to these, which treat of American naval actions, Capt. Mahan furnishes, in his best style, a description of "The Battle of Trafalgar." All of these essays are marked by sobriety of criticism, and a careful study of original records and sources of information not readily accessible to the general public. It is worthy of note that the *Constitution's* achievements form the subject of no less than three out of the eight papers. The lesson conveyed by the episodes narrated is that skilful seamen and trained gunners will always compel success where the opposing forces are not too greatly disproportioned. The book, as enjoyable as many a collection of short stories, should find appreciation on the part of those who view the present growth of the navy either with favor or with apprehension. Its one unpardonable defect (lack of maps and plans) is only partially remedied by a copious index.

In the latest volume of the Bell-Macmillan "Great Masters" series, Dr. W. Martin, Sub-Director of the Gallery at The Hague, gives us a careful account of that once vastly admired painter of the trivial and finikin, Gerard Dou. To-day it is not easy to excite one's self over the painful finishing of broom-handles, and we have found the most interesting thing in the book in an instance of the way guesses become rapidly converted into accepted facts. As Rembrandt frequently used himself as a convenient model, it is likely enough that he treated his relations in the same way, and an old woman who often posed for him and his pupils was, long ago, plausibly enough identified as his mother. Michel found that a certain old man, also of frequent appearance in the work of the studio, had been once painted by Dou in what was apparently a companion piece to a picture of this old woman, and he concluded that the pair were husband and wife, and that this particular old man, and not any of the others who had been called so, was Rembrandt's father. Now hear Dr. Martin: "Rembrandt's father repeatedly appears in the works of Dou and of Rembrandt between 1628 and 1630; and even after his death (April 27, 1630) his portrait recurs in their pictures—a proof of the impression made on both the artists by that typical head." Perhaps so; but might not a skeptical mind consider this fact as rather an indication that Michel was possibly mistaken in his identification? The translation is by Clara Bell.

Messrs. Longman send us the first two numbers of "Little Engravings," being thin volumes of photographic reproductions after some of the masters of wood-engraving. No. 1 is devoted to the extraordinary invention and scrawled design of Albrecht Altdorfer, and No. 2 to William Blake's cuts to illustrate Thornton's School Virgil, the only wood-engravings he ever did, and remarkable for their technical daring in the bold and sketchy use of the white line. This surprising inventiveness of method on the part of a life-long plate engraver, and not any great merit in the designs themselves, gives these blocks their interest. We could wish the reproduction and printing were somewhat clearer in either volume.

'Among the Night People,' by Clara D. Pierson (E. P. Dutton & Co.), is a book of children's stories of no particular merit, devoted principally to the habits of several nocturnal insects and a dozen wild mammals. Fiction, scientific facts, and moral lessons are mixed here in a confusion that makes the reader wish for either unadulterated natural history or pure fancy. The book may interest children, but it is not an artistic presentation of its subject.

'Hezekiah's Wives,' by Lillie Hamilton French (Houghton, Mifflin & Co.), describes the character and domestic experiences of a canary and his four successive mates. It is a pleasant variation on the theme of the individuality of animals, and shows that some canaries rise in intelligence above the mediocre level of their kind. The writer has made the most of her material, and her sketch is clever and entertaining; but she seems at times, notably in the last pages, to have read into the actions of her birds meanings and motives quite outside the limits of avian psychology. She makes no pretensions, however, to the use of scientific methods, and readers who love canaries will not be likely to find fault with her sympathy and enthusiasm.

Dramatic revivals at Leland Stanford Jr. University and at the University of Chicago respectively have lately (on May 17) been the occasion of "The Antigone of Sophocles," translated by H. R. Fairclough and A. T. Murray (San Francisco: Paul Elder & Morgan Shepard), and of "The Case Is Altered," by Ben Jonson (The University of Chicago Press). In either case the neat pamphlet is the book of the play. The prose translation of Professors Fairclough and Murray is printed on vellum paper; the Ben Jonson comedy has a facsimile title-page from the edition of 1609, with which it has been scrupulously compared under the care of Prof. F. I. Carpenter. This souvenir of the play thus becomes as well a contribution to textual criticism.

'The Tragedy of Julius Cæsar,' edited by Michael Macmillan, is the latest addition to the Bowen-Merrill Shakspere (Indianapolis). If the brilliant binding is not exactly a delight to the cultured eye, there is compensation in the quality of the paper, the clearness of the print, and the ample margins. The introduction runs slightly over ninety pages, one-third of which is devoted to a reprint of the portions of Plutarch (North's translation) upon which the play is based. The original matter is good and helpful in itself, but it lacks much and adds little as compared with chapters viii. and ix. of Professor Moulton's 'Shakspere as a Dramatic Artist.' Mr. Macmillan goes to an unwarranted length in concluding from such words as are put into the mouth of *Casca*, "The rabblement shouted and clapped their chopt hands, and threw up their sweaty night-caps, and uttered such a deal of stinking breath," etc., that the poet himself "heartily despised the multitude." The dramatic justification for such passages, where they occur, is entirely sufficient, and narrowness in the artist's sympathies must be proved from other sources. The footnotes might well have been confined within briefer limits. We do not need to be told that "Hence! home!" means *go hence, go home;* or that the carpenter's rule is "a piece of wood used by carpenters to keep their lines straight"; or that the Tiber banks from which the poor commoners were advised by *Flavius* to weep their tears into the channel were the banks of the Tiber (whereas there was opportunity to give a word to the possible echo of Horace in the reference of *Marullus* to the Tiber, a few lines before). Even a few such notes give the work the air of the elementary school-room, and are certainly not in harmony with the intent of the edition.

The most recent Greek additions to the Oxford Classical Texts are the 'Republic,' edited by Burnet, the first volume of Euripides, edited by Prof. Gilbert Murray, and both volumes of the Iliad, edited by Monro and Allen. The special fitness of these names will be immediately recognized by all scholars. Professor Murray has had the advice and private criticism of Von Wilamowitz-Moellendorf.

A useful pamphlet entitled 'Classical Archæology in Schools,' by Professor Percy Gardner, is published by the Clarendon Press (H. Frowde). Dr. Gardner explains briefly to teachers the manner in which archæology may be applied to illustrate the study of the classics and of ancient life, and gives some valuable advice on the subject. This is followed by a serviceable list of photographs, slides, prints, etc., with prices and publishers. The list might be supplemented to advantage, for schools in "the States," by reference to some American collections. Two of these it does, in fact, name. We believe that American schools and colleges have made an earlier start in this line of study than the English, as Dr. Keep's letter, recently published in these columns, conclusively proves. For this we have partly to thank the American School at Athens, and the impulse it diffuses.

The *American Ephemeris and Nautical Almanac* for 1905, recently issued by the Bureau of Equipment of the Navy Department, presents no noteworthy departures from the general design of the volumes recently preceding. The results reached by the Paris international conference of 1896 are embodied in practical form, so that astronomers who desire to use the star-places corrected to this standard, in preference to the earlier standard of Struve and Peters, can do so without the necessity of differential computation. The eclipses of the year are four in number, two each of the sun and the moon. Neither of the lunar eclipses is of moment, however; but of those of the sun, the annular eclipse of March 5 is visible in Australia, and the total eclipse of August 30 is the next one likely to afford the geographic conditions essential for expeditions. Labrador, Spain, and Northern Africa are the favored regions, and the total phase lasts about three and one-half minutes. By a misleading error of the draughtsman of the eclipse map, the province of Algeria is sunk within the bounds of the Mediterranean Sea. The predictions of stellar occultations are very full; but, as seen from Washington, the moon passes over no planet in 1905, nor any very bright star except Aldebaran on

September 19 and December 10. The useful auxiliary diagrams for identifying the planetary satellites are continued.

There has been much speculation concerning the absolute time when the outburst of light in the new star in Perseus, visible more than a year ago, actually took place. Now that the astronomers have calculated the star's parallax and distance from the solar system, definite data are at hand for deciding this interesting question. Dr. Ernst Hartwig of Bamberg finds, from a discussion of his careful observations, that the star is so remote from us that the luminous outburst must have taken place as long ago as 1880, and there are indications that it happened even earlier.

Dalny, on the Liao-tung Peninsula of Mantchuria, the terminus of the trans-Siberian railway system, owes its origin to a Russian imperial edict dated July 30, 1899. It is now, according to the *Consular Reports* for May, a substantial city of 50,000 inhabitants, with residences, hotels, churches, schools, places of amusement, and parks containing flowers, shrubs, and ornamental trees. Five stone piers, two first-class dry docks, and a breakwater are being constructed, and two steam dredgers are deepening the harbor. Twenty-three thousand laborers are at work, and the cost thus far is about $6,000,000, while it is intended to spend $12,000,000 more in completing the task. There is no custom-house, as the port is absolutely free, and the Government is to consist of a council, two of whom must be Russians, elected by the rate-payers, who may be of any nationality. There is continuous railway service to St. Petersburg, twenty-one days distant. A plan and numerous photographs show better than any description the astonishing work of a little more than two years.

Petermann's Mitteilungen, number four, contains an account of two journeys in 1877 and 1878 in West Africa by Alexander Ross. They are the first of a series of articles on forgotten travels in Kamerun by Paul Langhans. A new route from Yakutsk to Ayan on the Sea of Okhotsk is described by A. Sibiriakoff, who extols the advantages of this place as a commercial port for eastern Siberia. Baron von Toll concludes the story of his voyage through the Kara Sea, and gives a brief sketch of the scientific work of the expedition during the year 1900.

The only foreign learned organization in the city of Constantinople is the Russian Archæological Institute founded in 1895. Its recent annual report, published by the Director, Professor Uspensky, shows that it is rapidly becoming the literary and learned centre for the whole Slavic colony in the Turkish capital, as the Servian and Bulgarian officials and scholars also participate in the work, especially in attending the lecture courses given by the Director on Byzantine history. The Institute has a museum of its own, particularly well supplied with material for the study of Byzantine archæology and history. The Russian Ambassador presided at the recent annual sessions of the Institute.

A Danish expedition, equipped by the Carlsberger Fund, and under the direction of the archæologist Dr. Blinkenberg, has just started for the island of Rhodes. After long negotiations, the Sultan's permission to undertake researches there has been secured. They will be first made in the small city of Lindos on the northeastern coast of the island, where there are large ruins and ancient structures. The archæologist Dr. Kirsch accompanies the expedition.

The announcement of a "Course for beginners in Greek" and a course in Latin for "linguistic introduction into the sources of Roman law," at the University of Berlin and the other Prussian universities, is an event in educational history worth noting. These new courses are intended for graduates of the Real-gymnasium and the Oberrealschule, now admitted to the study of medicine and jurisprudence. It is evident that their introduction means the partial shifting of the ancient languages from the line of disciplinary or culture studies to that of aids to special professional knowledge.

Concerning our recent article on "Reference Libraries of Art Reproductions" (No. 1921), Mr. Silas H. Berry, Librarian of the Young Men's Christian Association, No. 317 West Fifty-sixth Street, reminds us that there is in his care a remarkable collection of books on art, which is freely open to the public. Architecture claims not less than 912 volumes; art antiquities, 300; sculpture, 225; engravings and prints, 840; portraits, including 8,000 collected previous to 1737, 204 volumes. This feature of the library is evidently too little known, and is clearly worthy the attention of students of art.

—Frances Power Cobbe, now in her eightieth year, has prepared, and Swan Sonnenschein & Co. have published with an elaborate preface and some supplementary matter a fourth edition of her 'Theory of Intuitive Morals,' which was originally issued in 1855. The book at that time made a profound impression. Theodore Parker and other American Transcendentalists received it with tumult of acclaim. Miss Cobbe now writes of it as the best piece of literary work done in her long life. The statement would command readier assent if she had left out the word "literary," which, however, she probably uses in its inclusive sense. It was certainly her most effective piece of writing. The first supplementary essay is a criticism of Darwin's moral theory in the 'Descent of Man,' and the second deals more particularly with Spencer's doctrine of transmitted experience as the cause in us of moral intuition. But what we crave is the application of Miss Cobbe's theory to such statements as those of Sidgwick and Leslie Stephen, which so profoundly modify the doctrine of Bentham and even that of Mill. We should also like to know what she has to say to such a mediating statement as that of Friedrich Paulsen's 'System of Ethics,' which does not, with Martineau, leave ethics hanging in the air, nor make the attainment of happiness our moral end and aim, but expounds a doctrine of "teleological energism"—that the moral law exists for the sake of life, not life for the moral law. But Miss Cobbe's book abounds in moral inspiration quite apart from its intuitional theory.

—Does the spirit of Hearne and the Nonjurors still flourish at Oxford? Probably not, but there appears from New College a volume which recalls the fortunes of the fallen dynasty in a picturesque and unusual manner. This work, 'Five Stuart Princesses' (Dutton), is a series of five essays by five different writers. Mr. Robert S. Rait, the editor, is a fellow of New, and all the other contributors, save Mr. Hodgkin of Queen's, are members of the same college. Of the five Stuart dames who have been selected as the subjects of these studies, four stand in tolerably close relation with each other. They are Elizabeth of Bohemia (Mr. Hodgkin), Mary of Orange (Mr. Cecil), Henrietta of Orleans (Mr. Bridge), and Sophia of Hanover (Mr. Rait). The other Princess, Margaret of Scotland (Mr. Butler), is removed from the first of this seventeenth-century group by nearly two hundred years and a great difference of circumstance. The reason why she is singled out from the many Stuart princesses of the early period seems to be a special one. Mr. Butler aims at illustrating the nature of the mediæval connection between Scotland and France. The Margaret in question, a daughter of James I., married Louis XI. while he was still the Dauphin, and died before he came to the throne. Her tragedy is, as Mr. Rait says, "one of those episodes in history which can never fail to appeal to the imagination and to the emotions; and it is a story little known." Our principal duty is to point out that the present volume is not simply a piece of compilation from books which are more or less accessible to the general public. In each case the author has made an independent study of the princess about whom he writes, for the sake of showing her relation to her immediate circle and to the main problems of contemporary politics so far as they were affected by her. Naturally enough, Elizabeth of Bohemia receives the largest allotment of space, for among all the Stuart princesses she is distinguished by the superiority of her talents. Mr. Hodgkin shows a very clear, discriminating perception of her gifts and character. "If Elizabeth," he says, "had come to the English throne (and for some years this had seemed a likely event), England might well have seen another Elizabethan reign as prosperous as that which had gone before. If the daughter of James I. was inferior to the daughter of Henry VIII. and of Anne Boleyn in caution and in a regard for economy, she surpassed her in straightforwardness and in devotion to the Protestant cause, she rivalled her in the capacity to arouse admiration and enthusiasm." These essays are not too much indebted to Mr. Gardiner, and as a collection of short biographies they are unquestionably to be commended.

—Bell's "Cathedral Series" (Macmillan), in its green covers, is growing towards completion, for it includes now twenty-five special volumes together with the general Handbook by James G. Gilchrist of the University of Iowa and the Rev. T. Perkins, rector of Turnworth, which is illustrated with just such half-tones as adorn the volumes devoted to separate cathedral establishments, and has in addition a map of England with the important architectural centres laid down, and a blacker and a paler line each explaining a possible itinerary. This map may be useful even for one who does not aspire to rush through the ecclesiastical architecture of England in a single trip, for it is of the utmost importance to know how to go from your centre, as London, in short circular trips southwestward, southeastward, or northward, and just

how many towns you can "take in" in your fortnight's flight. On the page adjoining the map is a table of the comparative dimensions of the cathedral churches, with a memorandum of their original foundation, for at least half of the English cathedral churches were once Benedictine monasteries or abbeys of St. Austin. Other interesting things are hidden away in this table, as, for instance, the fact that while only one English cathedral has a dome, three only (Lichfield, Norwich, and Salisbury) were known to the compiler as having spires. Chichester also has one, and at Oxford and on the western tower of Southwell are blunt and not lofty spires; but all the rest of the many cathedral towers of England are flat-topped. It is not surprising that the people of Coventry are proud of the three steeples which dominate their little town, nor that Tennyson once

". . . hung with grooms and porters on the bridge
To watch the three tall spires,"

for few are the towns in England which have even one such "star y-pointing pyramid," or at least one of ancient construction. The last one of the special volumes has to do with one of those four glorified cathedrals, viz., Chichester, on the south coast near Brighton; and the frontispiece shows the low-roofed nave and choir with low western towers and the single central spire, of no great height, but of very graceful design—an exact rebuilding of that which fell in 1861. The book has been written from a more strictly architectural standpoint than many of the series, for its author is Hubert C. Corlette, an associate of the Institute of British Architects. The chapter devoted to the "Diocese and See" is illustrated by some pictures which do not relate to the cathedral itself—the market cross, and two admirable tenth-century panels of elaborate sculpture, now in the church, indeed, but certainly not belonging to it.

—The merits of coca as the divine panacea for human ills are set forth in a volume of 576 pages by W. Golden Mortimer, M.D., under the caption, 'The History of Coca' (New York: J. H. Vail & Co.). It may fairly be said that nothing one might wish to know about this interesting plant and the preparations made from it, has been omitted, but it is doubtful whether the author will carry conviction to many, on account of his peculiar unfitness for writing a book. It was well enough for the venerable Diedrich Knickerbocker to begin the History of New York with the creation of the world, but this example is not exactly a safe one for other historians to follow. It becomes too fatiguing to read a full disquisition on the muscles, the nerves, the digestive organs, and the rest, for the sake of knowing the special action of coca on each part of the system. A physician does not require such elementary discussions, and the public cares not a fig for them. Neither is it necessary to preface an explanation of the use of coca in improving the vocal organs, by an epitome of the history and development of music. The matter is made worse when the author is destitute of the fundamentals of literary technique, without which no one should venture to write a book. That coca relieves fatigue by eliminating impurities from the blood, that it retards waste of tissue, diminishes the consumption of carbohydrates even under severe exertion, and that it stimulates the digestive functions, are points which the author emphasizes, and which may be true. That the "coca habit" cannot be acquired, however, demands more proof than has here been brought together. The most valuable feature of the book consists in a classified list of opinions of 369 eminent physicians upon the effects of this remarkable plant.

—'Post-Bellum Financial Administration of Japan' is the title of a bound book which contains Count Matsukata's final report to the Minister-President of State. It is a masterly conspectus of Japan's finances from 1896 to 1900, showing in detail, not only the budgets laid before and voted by the Imperial Diet, but the various special *comptabilités*, such as the mint and printing bureaus, silk filature, manufactory for articles needed for telegraph and lighthouse service, mining works, fire-arms factories, the Government railways, the universities and special schools, forestry, Formosan administration, etc. The book contains much luminous information about internal taxation, tariff system, leaf-tobacco monopoly (begun in 1898), the coinage, loans, use of the Chinese indemnity, etc. The introduction is pleasantly autobiographical, while modest, for the Count's supremacy as financial master of Japan is without challenge—except possibly by those violators of the law against whom he has been singularly active and diligent. In addition to the detail of information, with elaborate tables showing the revised land values, one sees incidentally how much like Holland Japan is, in having to pay continuously so much money for dikes to guard against devastation by river floods. For 1900-01 the expenditures for three of the rivers passed beyond 675,000,000 yen, and a scheme for five other streams, requiring some years for its fulfilment, is financed at 1,785,972,685 yen. Many new industries, including the breeding of cattle and horses, encouragement of art manufactures, and scientific agriculture under Government stimulus, are being grandly developed. The increase of the budget from 80,000,000 yen to 200,000,000 yen in 1896, and its steady enlargement in later years, with the tremendous expansion in all lines of production, industry, and business, and the change in the empire from the silver to the gold standard —all safely carried through—are among the remarkable phenomena of modern history. Not a little of the credit of Japan's happy financial revolution can be credited to Matsukata's foresight, ability, and patience. In Formosa the silver standard is temporary, but is necessarily still used. The book is printed at the Tokio Tsukiji Type Foundry.

STILES'S DIARY.

The Literary Diary of Ezra Stiles, D.D., LL.D., President of Yale College. Edited under the Authority of the Corporation of Yale University, by Franklin Bowditch Dexter, M.A. New York: Scribners. 1901. 3 vols. Pp. 665, 573, 648.

Of the publications issued by the officers of Yale University in connection with the recent bi-centennial of its foundation, none are more valuable than the 'Literary Diary of Ezra Stiles,' which has been put forth under the scholarly and illuminating editorship of Professor Dexter. His accurate reproduction of the text of Stiles's manuscript, his careful annotations and elucidations of Stiles's allusions, and thorough indexing, render the work a model of painstaking editorial supervision, and are worthily supplemented by the beauty of the typographic dress. Stiles's Diary was begun January 1, 1769, when the author was forty-one years of age and a pastor at Newport. It was continued uninterruptedly through the vicissitudes incident to the Revolutionary war, his election to the Presidency of Yale College, and his years of service as the head of that educational foundation—the last entry being made within six days of his death, in May, 1795. Though lacking much of the personal and social detail and quaint gossipy flavor that renders Sewall's Diary so enjoyable reading, or the interest attaching to the origin of the English colonies which characterizes Winthrop's Journal, Stiles's record must rank as among the few significant diaries of early New England.

The reader often wishes that Stiles had given more of custom or of social usage, but the gleanings of this field which can be gathered from his pages are very considerable. The record is that of an intensely active, eager-minded, widely inquisitive man, of much zeal for antiquarian research and thirst for knowledge in any field of scholarship open to him, conspicuously marked by an unfeigned desire to serve his country and his God in a trying time. One reads it with a deepening impression of the moral earnestness of the age in which the writer lived, and of the high purpose with which he strove to make the scanty resources at his command count for the interests of the mind and the less material concerns of life.

For his time Stiles was a man of broad sympathies. A successful Congregational pastor, his eager study of Hebrew brought him into cordial relations with the Jews of Newport. He had a kindly feeling for the observance of the Christian year. Christmas occasionally saw him in the Episcopal house of worship. He was asked by an Episcopal congregation to take orders and become its rector. He had good words for the Friends and the Lutherans. But his charity had its limits. He had no sympathy with the "new divinity" which the disciples of Edwards were propagating. He mourned (in 1769) the "prevalence of Episcy & Wickedness," and he noted the death of a famous Vermonter as that of "the profane & impious Deist Gen. Ethan Allen, Author of the *Oracles of Reason*, a Book replete with scurrilous Reflexions on Revelation,—'And in Hell he lift up his Eyes being in Torments.'"

Stiles's cordial relations with the Hebrews of Newport were induced by his desire to know more of their language, literature, and customs, and this desire was but one illustration of his general inquisitiveness. The transit of Venus, the invention of a new water-wheel, the discovery of a solvent for gold, the marvels of the balloon, a dark day, a bit of ecclesiastical antiquarianism, the fathers of the early church, biographic facts regarding eminent contemporaries, or the measurement of buildings in the town where he lived, alike engaged his attention. But, as was to be expected of his age, his prime objects of study were Biblical and linguistic. These tastes he impressed on his household. On

the fourteenth birthday of his elder son, in 1773, he records that the boy "has read out Virgil, Tully's Select Orations, &c., in Latin—& in Greek the four Evangelists & Acts—in Hebrew 48 Psalms." The second Mrs. Stiles learned Hebrew in middle life under her husband's tuition. Curiously illustrative of the spirit of the age is the reading of the Bible in course, which Stiles fostered in his household and encouraged by his example. He notes in 1793:

"My D. Ruth from 1775 to 1793 . . . has read her Bible fourteen times through: and my Gr. D. Eliza aet 11 has read it thro' five times. Emilia has lost her minutes, but has probȳ read it a dozen times & more. . . . My other Child. have read it sundry times . . . My [first] wife died 1775. She read thro' the Bible five times the last four years of her Life. . . . Kezia [his daughter] died 1785; she read it thro' five times the last five years of her Life. Besides readg in course privately in my Study, I read thro' the Bible in my Famȳ at family Morning Prayers from 1760 to 1791, Eight times."

This extent of Bible reading was characteristic of the age rather than peculiar to Stiles; but his wide scholarship, in which he stood conspicuous, led to the bestowment on him by Princeton, in 1784, of "two Degrees . . . at the same time, that of D.D. and that of Doctor of Civil & Canon Laws." It illustrates the nearness of life's sorrows to its satisfactions, as well as the slowness with which news travelled even after American independence had been secured, that on the day following this unusual honor he first learned, at Princeton, of the death of his elder son in North Carolina more than five weeks before.

Stiles's most significant work was in connection with Yale. It was not merely the ordinary difficulties of student government that he dreaded—they were evident enough to his apprehension: "An hundred & Fifty or 180 Young Gentlemen Students, is a Bundle of Wild Fire not easily controlled & governed—and at best the Diadem of a President is a Crown of Thorns." But far more serious were the perils to the college from lack of funds, the turmoil incident to war, and, above all, from religious and political disaffection, causing the college to be regarded with suspicion by a large portion of the inhabitants of the commonwealth. Stiles's anxieties and labors, and his successful management of the interests committed to his charge, are abundantly evidenced by the Diary under review. The actual force of instruction during most of his incumbency consisted of the President, a professor of divinity who was primarily the pastor of the college church, and three or four young and frequently changed tutors. But even this scanty equipment was frequently impaired by ill-health or other causes. In this situation Stiles had often to become a teacher of most dissimilar themes. In 1780 he records:

"The Business of the Professorship of Divȳ now devolves on me for the present; and besides my Histȳ Lect. I weekly give a public Dissertn or two on some philosophical or astronomical subject besides my private or chamber Lecture on Theology every Saturday afternoon. And besides these I attend every day the Recitations of the Senior & Jun. classes in Philosophy. . . . So that I am called to fill the offices of *three Professorships & the Presidency* at the same time."

The senior debates under Stiles's moderatorship offered a varied range of discussions, from so odd a legal question as "Whether Lazarus, after his Resurrection, had a right to his former Estate?" to discussions "Whether [it is] good Policy in the old States to encourage Emigration into Kentucky, Ohio & the New States?" "Whether Congress ought to have more Power & Authority?" or "Whether Imprisonment for Debt be just & right?" It lifts the curtain on the judgments of a bygone time to find the seniors debating "Whether Readg Novelles is beneficial"; and to note, in 1786, that the President "fined about 20 Scholars for going to see a play acted." A pathetic, yet often absurdly incongruous, portion of the Diary is that which records the progress of the nervous malady that dimmed the brilliant youthful promise of Stiles's colleague, the Professor of Divinity, and resulted at times in epileptic seizures in the most solemn portions of public worship. But it is far less strange to modern taste that a kindly and pitying Corporation should have allowed ministrations to continue which were so interrupted, than that the College pastor should thus begin a sermon to a student audience—a discourse that won the President's approval: "I shall entertain you with a miscellaneous Discourse upon the Words of an impious & abandoned Woman, So she caught him & kissed him &c. Prov. vii., 13-14."

In view of the conspicuity of Stiles's public station, and his inquisitive interest in the world about him, the Diary is somewhat disappointing in its harvest of information regarding matters of national interest. Stiles was ardently devoted to the patriotic cause. As early as 1773, certainly, he was entertaining the thought of American independence; but the comparative indefiniteness of information regarding the progress of public politics shows how the absence of the telegraph and of the ample newspaper service of the present day limited the knowledge of current events to be had by any one remote from the immediate centres of political activity. Such matters as came under Stiles's observation are told with much fulness of detail. He gives a clear picture of the capture of New Haven by the British forces, and of the state of alarm in which that town was plunged for months thereafter by fear of a repetition of the raid. He discussed the proposed American Constitution with his friends, and followed its fortunes with mingled hopes and fears. Some of these are well expressed in the following paragraph, which is worthy of quotation as embodying the contemporary opinion of the most eminent teacher in the New England of his day:

"We conversed on the new Constitution formed by the Convention. On wc I have formed this as my Opinion: 1. That it is not the most p'fect Constitution yet 2. That it is a very good one, & that it is advisable to adopt it However 3. That tho' much of it will be p'manent & lasting, yet much of it will be hereafter altered by future Revisions. And 4. That the best one remains yet to be investigated. When the Convention was proposed I doubted its Expediency. 1. Because I doubted whether our wisest Men had yet attained Light eno' to see & discern the best, & what ought finally to prevail. 2. Neither did I think the People were ripe for the Reception of the best one if it could be investigated. And yet 3. I did not doubt but Time & future Experience would teach, open & lead us to the best one. And tho' we have got a much better one than I expected, & a very good one, yet my Judgt still remains as before. I think there is not Power enough yet given to Congress for firm Government. Neither can I see how far it is safe to surrender the powers of the States to the Imperial Body, without 1. prostratg the Sovereignty of the particular States. 2. Without laying the Founda of the Presidents growing up into an uncontrollable & absolute Monarch. And yet I think the last as well guarded as possible, and I know not whether it is possible to vest Congress with Laws, Revenues, & Army & Navy, without endangering the Ruin of the interior Powers & Liberties of the States."

Under date of March 21, 1776, Stiles notes that the British troops, on evacuating Boston, left "Images of Hay dressed like Sentries standing with a Label on the Breast of one, inscribed 'Welcome Brother Jonathan.'" Professor Dexter comments that "the use of this phrase by the British at this date seems to prove that the common explanation of its origin (with reference to Washington's consultation with Gov. Jonathan Trumbull) cannot be the correct one."

RECENT AMERICAN POETRY.

It is the fortune of great cities to produce a large and indispensable class of what may be called semi-poets—of those who, with a little repression, might perhaps have accomplished something of triumphant value, but who win an after-dinner success so easily that they are rather apt to stop there. Thus it is with Mr. Charles Henry Webb's 'With Lead and Line along Varying Shores' (Houghton, Mifflin & Co.). He said in his earlier book, 'Vagrom Verse,' that the collection might have been epic "if he'd had a mind"; and in this volume he touches lightly on almost everything, from Captain Sid Fisher to Captain John Brown. Sid Fisher, on the whole, comes, as here painted, nearest to the human heart. It is a tale of a certain night when the fishing-boats from Nantucket were all driven in by a hurricane and the light at the end of the jetty went out. Thus it is unfolded (p. 83):

Once late in the fall came a terrible night,—
The sky was black and the sea was white;
The fishing fleet had been out all day
With their nets and trawls on the lower bay;
Though little of wind, we knew by the ruck
Of smoke-colored clouds around Tuckernuck.
By the whimper of gull and scream of curlew
As they wheeled and away for Muskeget flew,
By the sky flattened now like an adder's crest,
And the flashing of forked tongues in the northwest,
That a pot-full old Davy had put on to brew,
And soon it would simmer there, back of Coatue.

Night came, and the tempest, with drive and din,
Till the bravest well wished the boats were in,—
And more than wished when there came a shout
That the light on the end of the jetty was out!
It was then Sid Fisher said this thing to me:
"Ne'er a dory could land in that red-hot sea;
And my cat-boat out in that crunchin' swell
Wouldn't live no longer 'n a cat in hell!
But they'd take it unkind, the boys, belike,
If their boats bound in on the jetty 'd strike.
'Tain't just what you'd call a promisin' night;
But I guess I'll skin out an' fix my light."

"It ain't no sort o' use," said old Skipper Snow;
But he said, said Sid Fisher, "I'm a-goin' to go!"
He tightened no belt, for no belt he wore;
He cast no last look as he left the shore
(And mostly you'll find these belts and looks
Are frequentest tightened and cast in books);
But he took off his shoes—a practical thing—
That his feet to the rocks might like limpets cling,
And out in the night and the storm he crept
To the jetty's end where the light was kept.

God! it was something to see him go
Out on that reef of fear and woe!
However he did it I do not know!

The rocks all green with a slippery moss
Gave little of foothold by which to cross,
And with jagged points and barnacle shells
Cut wounds that were all of them crimson wells;
But he climbed and bled through that hell of hells,—
Through lurid billows that high and higher
Swung torches of phosphorescent fire,

Through smother of spray and fret of spume
That flew like waste from a weaver's loom,—
Until lost in the night; and we saw no more,
Though all waited and watched upon the shore,
Till a red light showed on the jetty's end,
And the boats came bowling into the bend.

For he got there—and back; just how I can't say;
But all out that night were alive next day;
For the matter of that, most are living yet,
Still busy with dredge, with trawl, and net—
Thanks to heaven—and something to Sid,
Who showed them a light when the stars were hid.

The poems of Robert Bridges ("Droch") entitled 'Bramble Brae' (Scribner) are largely of the same after-dinner class with those which prevail in Mr. Webb's volume, but the younger poet is more meditative, and there is a whole volume of criticism condensed into these eight lines upon a brother author (p. 75):

IN GEORGE MEREDITH'S POEMS.

Here is a forest tangle—
Rank weeds, luxuriant ferns, and giant trees,
All in a hoarse-voiced wrangle,
With creaking branches swaying in the breeze.
But if you care to listen,
Above the noise you'll hear the piping of a bird,
Gay feathers in the tree-tops glisten,
And over all the sweetest music ever heard.

For some reason not yet thoroughly explained, New York still fails to inspire poetry as London does, and the poetry even of London is still admittedly inadequate. The 'Poems' of Mr. Charles G. D. Roberts (L. C. Page & Co.) contain the best New York silhouettes yet drawn, but even he has never equalled the poems which he wrote when he had Blomidon and Tantramar for a background, as, for instance, his "Epitaph for a Sailor Buried Ashore." Yet the very name of his "New York Nocturnes" creates expectation, and such a poem as this does something to fulfil it (p. 115):

ON THE ELEVATED RAILROAD AT ONE HUNDRED AND TENTH STREET.

Above the hollow deep where lies
The city's slumbering face,
Out, out across the night we swing,
A meteor launched in space.

The dark above is sown with stars;
The humming dark below
With sparkle of ten thousand lamps
In endless row on row.

Tall shadow towers with glimmering lights
Stand sinister and grim
Where upper deep and lower deep
Come darkly rim to rim.

Our souls have known the midnight awe
Of mount, and plain, and sea;
But here the city's night enfolds
A vaster mystery.

Short as it is, this poem is perhaps one verse too long, since the closing lines are simply a guideboard to point out the moral —an error sometimes committed by Longfellow, and almost always by Whittier.

It is rather difficult to know what view to take of the curious book called 'Poems: Medley and Palestina,' by J. W. De Forest (New Haven: Tuttle). The poet is the author of many novels whose success might have been more substantial had not Mr. Howells selected one of them for rather extravagant praise, from which some reaction apparently followed. There are two parts of this volume, the first half being essentially a medley, as it claims to be, with much poor material in it, and the second part being mystically religious, and often as grim in versification and phraseology as Sternhold and Hopkins. The very first line of these poems of Palestine is in celebration of "Chedarlaomer of Elam," and we are liable at any time to encounter such verses as (p. 182)—

"The wool of Kedar's sable tents;
Togarmah's steeds and Javan's swords;
The bars of Ophir's aureate hoards;
The spice of Sheba and the scents."

The author is, however, one of many who have sung the Palatine light of Block Island, always a poetic theme; and there are some love songs, especially "The Meeting" (p. 58), which have deservedly led a life in the corners of newspapers for many years. At any rate, a man who is the author of more than one good novel, and who afterwards fought at Port Hudson and in the Shenandoah valley, has some right to beguile his old age as he will.

Longman the publisher, the founder of the great house, used to say sternly to young authors, "Book, sir, book? It's the title." Few young poets come before the public with so many original and suggestive titles for their poems as Miss Anna Hempstead Branch, in her volume, 'The Heart of the Road, and Other Poems' (Houghton)—such, for instance, as "Song of the Wandering Dust," "The Shadow of a Cloud," "The Keeper of the Halfway House," "The Watch-Tower of the Soul," "A Voice from the Outlands," "The Piper's Morrow," "The Thought of the Little Brother." The mere table of contents to this book suggests more to the imagination than the whole contents of a dozen average volumes, and, moreover, each title has something to justify it. One alone we would fain have seen omitted, "The Dance of All Dead Bones," which is needlessly grim. But what can be daintier than this dream of girlish childhood (p. 44)?

THE BLOOMING OF THE ROSE.

What is it like, to be a rose?

Old Roses, softly, "Try and see."

Nay, I will tarry. Let me be
In my green peacefulness and smile.
I will stay here and dream awhile.
'Tis well for little buds to dream,
Dream—dream—who knows—
Say, is it good to be a rose?
Old roses, tell me! Is it good?

Old Roses, very softly, "Good."

I am afraid to be a rose!
This little sphere wherein I wait,
Curled up and small and delicate,
Lets in a twilight of pure green,
Wherein are dreams of night and morn
And the sweet stillness of a world
Where all things are that are unborn.

Old Roses, "Better to be born."

I cannot be a bud for long.
My sheath is like a heart full blown,
And I, the silence of a song
Withdrawn into that heart alone,
Well knowing that it shall be sung.
Outside the great world comes and goes—
I think I doubt, to be a rose—

Old Roses, "Doubt? To be a Rose!"

We do not find the name either of Mr. Moody or of Mr. Charles E. Russell in the recent volume of 'Hoosier Poets,' but both may well add to that prestige which has been claimed justly of late for Indiana authors; Mr. Moody having been born there, and Mr. Russell publishing there his book entitled 'Such Stuff as Dreams' (Indianapolis: Bowen-Merrill). The collection contains many strong poems of travel and of war, several graceful and tender ones addressed to a child called "Barbara," seven sonnets portraying Julia Marlowe in different characters, and a brave protest against the Boer war, with nothing, however, about the Philippines. There is a fine ode on the sixty-second birthday of Swinburne, and the author cannot even use the form of stanza called the "Roundel" without paying a tribute to his master. In the note he says:

"I have no right, I think, to make use of this stanza without acknowledgment and humble apologies afar off to the great singer that has endowed English poetry with this and so many other stanzaic forms. But no words of mine could suffice to recount the world's indebtedness to the greatest English singer and greatest English soul since Shelley, the master musician and master mind of modern song, Algernon Charles Swinburne."

This is the Roundel in question (p. 121):

AT THUN.

So faint and sweet about the woven trees
I know at Thun the waves of music beat.
Alas! I hear no other melodies
So faint and sweet.

Across the little lake with glimmering feet
The new moon slips, her shadowy draperies
Streaming behind her in her swift retreat.

Now as her last bright glimmerings shine and cease
I know just how along the lonely street
One footstep falls like rain on summer seas,
So faint and sweet.

Still another Indianapolis poet, if the place of publication selected by him affords any test, is Edward Uffington Valentine, whose 'Ship of Silence, and Other Poems' (Bowen-Merrill) strikes the reader as a little immature, and often suggestive of the rather florid style of Mr. James Lane Allen, to whom the book is dedicated. Mr. Valentine has a dangerous gift of language, fashioning his own condensed epithets, sometimes admirable, sometimes questionable, as in the following poem (p. 13), where the "dervish rounds" of the leaves is excellent, as is also "the tawny lamp-flame tugs its wick," while "flexile flames" is perhaps too alliterative for strength, and "garth" too essentially local to be quite justified:

HELEN.

She sits within the wide oak hall,
Hung with trophies of the chase,—
Helen, a stately maid and tall,
Dark-haired and pale of face;
With drooping lids and eyes that brood,
Sunk in the depths of some strange mood,
She gazes in the fireplace, where
The oozing pine logs snap and flare,
Wafting the perfume of their native wood.

The wind is whining in the garth,
The leaves are at their dervish rounds,
The flexile flames upon the hearth
Hang out their tongues like panting hounds.
The fire, I deem, she holds in thrall;
Its red light fawns as she lets fall
Escalloped pine cones, dried and brown,
From loose, white hands, till up and down
The colored shadows dye the dusky wall.

The tawny lamp-flame tugs its wick;
Upon the landing of the stair
The ancient clock is heard to tick
In shadows dark as Helen's hair;
. . . . . .
And as I muse on Helen's face,
Within the firelight's ruddy shine,
Its beauty takes an olden grace
Like hers whose fairness was divine;
The dying embers leap, and lo!
Troy wavers vaguely all aglow,
And in the north wind leashed without,
I hear the conquering Argives' shout;
And Helen feeds the flames as long ago!

Next after Indiana, San Francisco has seemed for a few years to be the home of poets, and the latest of these, Lorenzo Sosso, is one of those who show the current tendency of poetry to draw its materials from science rather than from Scripture. His book is entitled 'In the Realms of Gold: A Book of Verse, 1891-1901' (San Francisco: Elder & Shepard). The following illustrates the strength and imaginative quality which come from this scientific source (p. 48):

AN EARTH-SONG.

I whirl along—I work and weave,
My dole of labor I receive
From lords of day and night:
The centuries come, the centuries pass,
They are but as the summer grass
That withers in my sight.

. . . . . .

I whirl along—From every field
Men reap the harvests that I yield,
My life is in the seed.
I feast alike on flesh and fruit,
The Lord of all things absolute
Provideth for my need.

I whirl along—The lightnings fail
To pierce the heavy coat of mail
Around me loosely cast.
The earthquakes scarcely stir from sleep
The mighty monsters which I keep
Within my caverns vast.

. . . . . .

Strange comets ply their shuttles swift,
Derelict orbs before me drift
Upon vast seas of flame.
And myriads, myriads more than these
Are rushing onward on those seas
For which I have no name.

Onward by some deep current swept,
Faithful His mandates have I kept,
What the Lord gives I give:
I am the grave as well as womb,
I am the cradle and the tomb
Of all that breathe and live.

There is much of domestic tenderness and simple affection in this book, besides the imaginative quality.

Another well-known San Francisco writer, Dr. Edward Robeson Taylor, already well known as the best translator of the French Heredia, sends a pamphlet of his own, full of thoughtful meditations in verse, called 'Into the Light' (Elder & Shepard).

What is the quality which separates Chicago from Indiana and San Francisco? Certainly a little more roughness of treatment and a greater variety of theme; subjects drawn from Boston with Holmes and Lowell, from Concord with Thoreau and Emerson, from Springfield with Emily Dickinson; and still the return to Chicago. This is the way in which that city's children woo her. Or at least, this is what we find in 'Songs, and Other Fancies,' by Henry D. Muir (Chicago: Published by the Author, p. 97):

CHICAGO.

With those who blame their gods for some ill chance,
And rail unwittingly along the dark,
Stood I, Chicago! and thy faults were stark
Before mine eyes—thy giant arrogance,
The lewdness of thy postures and thy glance,
Thy brutal, stolid creed, thy sordid arc
Of widening unrest—these I did mark;
Then hurled at thee my curse, as poisoned lance.

But when, on distant levels of the plain,
I mused amid the snapping mongrel crew,
And saw thee bend not, for complete disdain,
One mighty sinew from its purpose true,
But rearing proud and stalwart,—then, I knew
Thy face in truth; I was thy son again.

The last sixty pages of the book are occupied by what the author himself felicitously described as "Chop Sooy, being a rather incongruous mixture of allegory, fable, satire, metaphysics, and sheer nonsense," the last predominating. The lines are rhymeless and measureless, like condensed fragments of Whitman; and the keynote of the thought is drawn apparently from the German Nietzsche.

Mr. John Vance Cheney is another resident of Chicago, and his name is well known among those of American poets. The title 'Lyrics' (Boston: Birchard) seems to us peculiarly non-descriptive of his poems, since, whatever else they do, they do not exactly sing themselves as does, for instance, much that is otherwise nonsensical or valueless in Poe. In a short poem like the following, we see Mr. Cheney at his best (p. 48):

THE IMMORTALITY OF MIGHT.

The brazen gate, the tower proud,
And haughty wall are as the cloud;
Kings, kingdoms—as a dream they pass,
They are as wind-waves on the grass.

Passes the last remembrancer
To tell us that the mighty were;
In death's one trench shall Shakespeare lie,
The common night close Cæsar's eye.

Believe it not. Once might has birth,
It dwells for ever in the earth.
Does glory flame, there Shakespeare is;
Cæsar strives yet—that wreath is his.

The alleged revival of interest in Sir Walter Scott is perhaps responsible for a thick volume of narrative verse based on the legends of Lake Champlain, Lake George, and Fort Ticonderoga. The introduction is in a tumid style, not inappropriate to the whimsical title of the book, 'Ye Mountaineer,' by Bingham Thoburn Wilson (Neely). He has attributed to his characters, he tells us, local names which will "prove an interesting puzzle in the location of historic parallels which are identical with these fictitious personages," and he had previously discussed the book "in a party of gentlemen, among whom were two former idens of New York city publishers." What "idenures" are, does not appear, but they advised against it. Nevertheless, the aim of the book seems to us unexceptionable, the pleasing jingle of the "Lady of the Lake" is easily caught, and we can only hope that the next work by this laborious author may be more mature and less imitative.

Passing to what we take to be a Virginian atmosphere—though with a Boston publisher—we find grace and sweetness, not unmingled with strength, in a little volume called 'The Watchers of the Hearth,' by Benjamin Sledd (The Gorham Press). There is a glimpse of real power in the following (p. 26):

THE SOUTH-SEA WATCH.

"The horror of a night watch on the beach!"
—Letter from the Philippines.

Is this the end of his dreams? pacing this lonely shore,
With the strange, dark land behind, and the unknown sea before;
And the land so still in its sorrow, and the sea so loud in its grief,
The myriad moan of the sands, and the long, deep roar of the reef;
And somewhere far in the darkness, for ever high over it all—
Like the voice of one forsaken—the buoy's lone, wailing call.

. . . . . .

And, lo, across the moonlight phantom caravels go,
Bearing the white man's lust, and the long, long years of woe—
The years of rapine and slaughter the patient land has known,
Till the hands that have sown the whirlwind must reap of the seed they have sown.

And all around in the darkness, voices lament and weep—
The mighty shades of heroes swarming up from their unknown sleep
In the gloom of the primal forest, in the vasty holds of the deep—
The dauntless spirits who followed those quests of glory and gain,
Lighting in blood-stained splendor the deathless name of Spain.

But the midnight vision passes, and the sea breaks forth in its grief—
The myriad moans of the sands and the long, deep roar of the reef,
And somewhere far in the darkness, for ever high over it all—
Like the voice of one forsaken—the buoy's lone, wailing call.

The Victoria History of the Counties of England. Norfolk. Vol. I. Edited by H. Arthur Doubleday. Westminster: Archibald Constable; New York: E. P. Dutton & Co.

The important project which this title recalls must be already familiar to many of our readers. It was a piece of literary gossip some years ago that a vast history of the English counties was in preparation, and more than one volume of the work is now in the hands of subscribers. We have received the first of the six volumes which will be devoted to Norfolk, and though this forms too slight a basis for a general appreciation of the series, we shall make it an excuse for saying a few words about the scheme at large.

There is reasonable ground for the prediction that the Victoria History, when completed, will bear comparison with the 'Oxford Dictionary' or the 'Dictionary of National Biography.' We refer, of course, to the scope of the enterprise and to thoroughness of execution. To be sure, it is local, whereas these other works have a universal value to all who use the English tongue. But if it makes its appeal to a smaller circle of readers, it can lay claim to a certain proud distinction, to a certain "splendid isolation," by virtue of its extreme magnificence and costliness. Altogether there will be two hundred volumes, one hundred and sixty being devoted to text and the remainder to genealogies. The published price of the whole set will be, for the United States, more than three thousand dollars, so that the general editor, Mr. Arthur Doubleday, may well exclaim with Ozymandias: "Look on my works, ye mighty, and despair!"

It is not necessary that we should attempt to criticise the older county histories of England at any length. Some of them—like Surtees's 'Durham,' Ormerod's 'Cheshire,' Hasted's 'Kent,' and Blomefield's 'Norfolk'—are in a certain sense classics. They, too, have become expensive by being rare, and comparatively few of the forty counties have local annalists that take rank with those whose works have just been mentioned. Moreover, the improved methods and facilities for research which have come into being since Blomefield and Surtees wrote, affect the county and township no less than they do the kingdom. Any one who has followed closely the course of Domesday studies during the last generation will recognize a vast difference. The training which sufficed an antiquary in 1850 no longer answers now. Local history assumes new meaning when it is brought into line with the whole course of constitutional development, of national evolution. Ever since the days when Stubbs published his justly celebrated opus, the constitutional historian (of the Norman period at least) has been forced to make himself in part antiquary. The writings of Maitland and Round show how less and greater, local and national, are drawing together.

Every reason exists, then, for the preparation of a new, comprehensive, and cooperative history of the English counties. A few of the shires may lose their privileged distinction of being much better represented than their neighbors, but we can see no other objection to the present enterprise than this, unless it be a form of publication which places the work beyond the reach of all but the very rich. A great conception having been grasped, the essential thing was to secure a strong staff of contributors. As we have said before, there is every ground to suppose that thorough workmanship will be put into each volume. We have before us a list of those who have consented to act on the Advisory Council, and if names mean anything the work has powerful guarantees. After four dukes come Lord Salisbury and Lord Rosebery, Lord Dillon, President of the Society of Antiquaries; Lord Acton and Mr. York Powell, the two Regius professors of history; Sir E. M. Thompson, Director of the British Museum; Sir Henry Maxwell-Lyte, Keeper of the Public Records; Mr. Lionel Cust, Director of the National Portrait Gallery; Prof. Ray Lankester, Director of the Natural History Museum, etc. Besides leading peers and prominent officials the list takes in Mr. J. H. Round, Mr. Walter Rye, and Mr.

W. H. St. John Hope, who are known to all students of English local history as antiquaries of the first rank. Out of regard to space we shall refrain from quoting the names of the Sectional Editors, "who will coöperate with local workers in every case." They, as also the Records Committee and the Architectural Committee, are specialists of the highest authority in their respective fields.

To resume, this great undertaking is being prosecuted under the most favorable circumstances that could be imagined. Doubtless it will be a history for the squire as well as for the student, but the pedigrees are being put in separate volumes, and it may be expected that mere ancestor worship will be reduced to a minimum. What the real objects are may be gathered best from the following statement, which occurs in the general advertisement:

"The Victoria History will trace, county by county, the story of England's growth from its prehistoric condition, through the barbarous age, the settlement of alien peoples, and the gradual welding of many races into a nation which is now the greatest on the globe. All the phases of ecclesiastical history; the changes in land tenure; the records of historic and local families; the history of the social life and sports of the villages and towns; the development of art, science, manufactures, and industries—all these factors, which tell of the progress of England from primitive beginnings to large and successful empire, will find a place in the work, and their treatment be intrusted to those who have made a special study of them."

Most of the counties will receive four volumes each. Bedford and Rutland fall below this number, while Norfolk rises to six volumes and Yorkshire to eight. The first instalment which has reached us is Norfolk, Volume I. In its mechanical features it is as handsome as one might expect, from the price, that it would be. Being first in its own series, it is largely given up to Natural History and Zoölogy. After the mammals have been disposed of and towards the close of the volume, Early Man comes in, to be followed by essays on Romano-British Remains and Anglo-Saxon Remains. Since it would be unsatisfactory to deal with a sixth (and a preliminary sixth), we shall defer our particular notice of 'Norfolk' until further volumes have appeared. In the meantime, we may say once more that the Victoria History promises to be a sumptuous, scholarly, and monumental production.

History of Lace. By Mrs. Bury Palliser. Revised and enlarged edition. Charles Scribner's Sons. 1902.

It is nearly thirty years since Mrs. Palliser published her 'History of Lace,' and it is still the classic of the subject. But in thirty years the conditions of lacemaking have greatly changed, while the art itself has had many developments. The revised edition will be welcome to all lace collectors, and to many more who love lace without knowing much about it. New chapters on Cretan and Sicilian laces have been added, and in many sections the book has been practically rewritten.

Lace-making is a comparatively modern industry. The Greeks knew nothing of it; and the Egyptians, Babylonians, and Jews produced skilful embroiderers, but no lacemakers. It is to the "cut-work" or open-work embroidery, which came into universal use in the sixteenth century, that we must look for the origin of lace. The first lace was called "passement," and the term was retained till the middle of the seventeenth century, when the word "dentelle" came into vogue, from the fashion of making "passement" with a toothed edge. Still we find, among the articles furnished to Mary Stuart in 1567, "une pacque de petite dentelle," the only use of the word in her wardrobe accounts.

Lace is properly divided into "point" and "pillow" (or, more correctly, "bobbin") lace. The term "point" should be restricted to lace made by the needle on a parchment pattern, but it has been much misapplied. From the specimens of Venice point of the seventeenth century that survive and are reproduced in Mrs. Palliser's book, we see how rapidly the art developed. When, in the middle of that century, the famous French Minister, Colbert, whose name will always be associated with the spread of the industry in France, established a manufactory for the "points de France," there followed a general awakening of the art throughout Europe. From this time we see flourishing side by side and in keen competition the laces of Venice, Brussels, Spain, Valenciennes, and Mechlin. A French edict of 1613 against superfluity in dress prohibits the use of all "passement de Milan" under a penalty of 1,000 livres; and from that time, down to the innovation of machine-made lace, the history of the art is the story of the long and usually futile struggle of the lacemakers against sumptuary laws, protective duties, and last, but not least, the vagaries of fashion. Of all trades the lace trade has been the most evanescent. But though it frequently slumbers, it never dies. Commercial crises and revolutions may check it, as at Lille and Arras in 1848. The lacemakers of Chantilly, once so renowned for its black laces, perished on the scaffold with their aristocratic patrons in 1793, and two centuries earlier a sumptuary law killed the trade in central France. But at all points the trade has revived from time to time. To-day France makes more lace than any other country, and supports half the lacemakers of Europe. In earlier times lace received the stamp of the special style of each country. Italy produced Venetian and Genoese points; the Netherlands was famed for Brussels, Mechlin, and Valenciennes; Spain for silk blondes; England for Honiton; France for "point d'Alençon," the only French lace not made with bobbins on a pillow. But in these days every style is copied by almost every nation. Even in 1680, in a discourse on trade that bears the significant title "Britannia Languens," we read that the laces called "points de Venise come mostly from France, and amount to a vast sum yearly."

The most durable of all laces is the "point d'Alençon." It is the only lace in which horsehair is introduced along the edge; and it is related of a collar made for Louis XIII. that the laceworkers, unable to find horsehair sufficiently fine, used their own hair instead. The manufacture of Alençon was almost extinct when Napoleon revived it, but the industry collapsed with the Empire. A dress composed of two flounces of this "point," costing 85,000 francs, was exhibited in 1867; it took forty women seven years to make, and came from Bayeux, now the centre of the industry in France.

Evidences of the lace fabric appear in Italy as early as the fifteenth century, and the Italians claim the invention of "point," or needle-made, lace. The Venetians were especially famous for their points, but the art had gradually died out when in 1872 an exceptionally severe winter drove the people of Burano to return to their neglected industry. The lace school founded in that year opened with eight pupils, who were paid to attend; in 1897 it had four hundred skilled workers. Burano prides itself on needlepoint. Meanwhile, Cavaliere Jesurum opened a school for bobbin-lace on the Lido, and about 3,000 women are now employed on that branch of the trade in Venice and the islands.

The lace industry was brought to Devonshire by Flemish refugees who fled from the persecutions of the Duke of Alva. In the seventeenth century, and for long afterwards, lace was the most important English manufacture next to woollens. The thread used for Honiton came from Antwerp, and cost 100 guineas per pound; the price of the lace being proportionately high. After the French Revolution, came the fashion of classical dress, which does not encourage lace, and the trade languished. When, however, Queen Adelaide ordered a dress to be made of Honiton sprigs, all to be copied from nature, she gave the industry an impetus that has lasted to the present day. The wedding lace of Queen Victoria was made in Devonshire, and the bridal dresses of all the English princesses have since been made of Honiton point. There are now no varieties of lace that the women of Devonshire are unable to reproduce. But, naturally, the art is threatened by the competition of machine-made lace, and the temptation to make the cheaper kinds has done much to degrade the manufacture.

Mrs. Palliser's book contains a short chapter on the history of machine-made lace, which is, of course, a thing apart; a useful glossary of terms employed by the lacemakers; and a most valuable bibliography and index. The work is most complete, and the illustrations are excellent. Occasionally we could wish for more information about the actual conditions of lace-making in certain sections at the present day; but in most cases the book has been brought up to date. We have not found any mention of the lace made in the Azores, which is certainly rather curious than attractive.

Ellen Terry and her Sisters. By T. Edgar Pemberton. New York: Dodd, Mead & Co. 1902.

Mr. Pemberton is an expert in that particular branch of theatrical biography which is recognized, by the initiated, as part of the regular machinery of the box-office, although not openly connected with it. He is a chronicler who would have delighted the sensitive, egotistical soul of Charles Kean; a diligent and not unskilful purveyor of honeyed compliment, but ever blind to any imperfection that might mar the perfect symmetry of his idol. Not that he is guilty of the grosser flatteries and reckless inventions that are the stock in trade of the hired press agent—he is too judicious and, perhaps, too sincere a work-

man for that; but his enthusiasm is so excessive that it permits no qualification of his praise, and his book, in effect, is one long and indiscriminate eulogy; exceedingly agreeable reading, doubtless, for the chief subject of it and her many friends, but otherwise, except as a record of her professional life, pretty nearly valueless.

This being the case, it is not necessary to discuss it very seriously or minutely. As biography it makes no pretence to either fulness or accuracy. It does not, for instance, contain even an allusion to George Frederick Watts, an omission sufficiently suggestive of its general character. As a history of the achievements of the remarkable Terry family, it is worth a place on all theatrical book-shelves. There are few more striking instances of an hereditary talent, which is now beginning to manifest itself in the third generation. The word talent is used advisedly, for it is questionable whether any member of the group can lay claim to the supreme gift of genius, which implies a wider power of imagination and interpretation than the most successful of them have revealed. That Ellen Terry, within a certain and by no means narrow range, is an actress of exquisite skill and extraordinary personal fascination, nobody will dispute. Her many triumphs attest the fact. Her *Portia*, her *Beatrice*, her *Ophelia*, her *Queen Henrietta*, and her *Olivia* would insure her a place in the front rank if she had done nothing else; but her limitations are as marked as her abilities, and were revealed clearly enough in *Juliet*, *Lady Macbeth*, and *Katharine*. One would think, from a perusal of Mr. Pemberton's rapturous pages, that she was equally great in all, and that her acting was the main foundation upon which the fame of the London Lyceum was reared. And yet there are many old playgoers who hold that her sister Kate, whom they fondly remember as *Juliet*, *Ophelia*, and *Blanche de Nevers* in "The Duke's Motto," was a finer actress than she, with profounder and truer emotional power, and scarcely inferior grace. Even to-day there are persons who maintain that in her own line of character Marion Terry controls chords of emotion which Ellen cannot sound. That the latter is the most popular English-speaking actress of her time—not forgetting Mrs. Kendal—is a proposition which might be supported at least with plausibility, but none of these clever women has ever rivalled or essayed the flights sustained by Adelaide Neilson, Helena Modjeska, Fanny Janauschek, Helen Faucit, Charlotte Cushman, or Clara Morris, in all of whom there was the unmistakable glow of the divine fire.

The book, however, is, in more senses than one, a handsome and by no means undeserved tribute to players who have contributed largely to the intelligent entertainment of the Anglo-Saxon community, and have been closely associated with much of the best work done on the modern stage. It contains, also, for those who will read it aright, the salutary moral that thorough training and arduous labor are no less essential than natural capacity to those who would reach the topmost rungs of the ladder of theatrical fame. The powers of all the Terrys were developed by long years of assiduous and humble practice in every variety of drama. Ellen learned some of her first and, doubtless, most valuable, lessons when, in the impressionable hours of childhood, she took part in the Shaksperian pageants of Charles Kean, who, if never a great actor, was a most accomplished and conscientious manager, well versed in all the traditions of the old legitimate school. To the experience gained then she probably owes much of her graceful mastery of theatrical art, the picturesque poses, the free, eloquent, and charming gestures, the incessant vitality, and the musical diction that enabled her in her prime to succeed to the parts once filled by Ellen Tree, and become a fitting mate for Henry Irving (a much bigger man than Charles Kean) in the glories of the London Lyceum.

Studies in Music. Edited by Robin Grey. Scribners.

A fine portrait of Brahms (he was a handsome man) adorns the collection of papers on various musical topics brought together in this volume. They first appeared in the *Musician* (London), and were well worth preserving in permanent form. The place of honor is given to the late Philip Spitta's article on Brahms. It is commonly assumed that Brahms is a follower of Schumann. In Spitta's opinion, these composers "are as totally unlike as two artists with a common view of art can possibly be." He mentions as one of the leading characteristics of Brahms "a dislike for purely emotional music," and in this respect he certainly was unlike Schumann. "Brahms is rarely pleasing," the author writes; "he has not even Schumann's heartfelt quality." That "even" is rather amusing; for music which is not heartfelt is not worth having, except for pedagogic purposes. It seemingly did not occur to Spitta that, in making such an admission, and adding that "His warmth is in reserve; his tenderness is shy of coming forward, and is apt to restrict itself to the briefest possible expression," he relegates his idol among the minor deities. It may be admitted that Brahms introduced novel harmonic features by reverting to the methods of the sixteenth century and consciously using the Dorian mode; also, that he showed a wealth of fancy in his treatment of the form of variations. But as a writer of songs and symphonies Spitta overrates him; and when he asserts that "Brahms won for the waltz its restoration to a place in the higher ranks of music," we wonder if he ever heard of Frédéric Chopin.

Two other modern composers—César Franck and Vincent d'Indy—are eulogized, by Guy de Ropartz and Hugues Imbert, respectively. It is to be feared that their pleadings will prove in vain, even though M. Ropartz closes his article by citing Arthur Coquard's assertion that "Franck's place in the history of music is beside Bach." Bach is discussed as an organist by Widor, and as a victim of contemporary criticism by J. S. Shedlock. What Claude Phillips says about "The Conception of Love in Wagner's Dramas," and Gabriel D'Annunzio about "Tristan and Isolde" is worth reading, though no new points of view are disclosed.

Of special interest is an article by A. J. Jaeger on "Wagner in London in 1855," which is based on letters to Wesendonck, and adds some significant details to those given in the correspondence with Liszt for our knowledge of Wagner's experiences in London during the four months he spent there because he could not resist the temptation of earning the munificent sum of $1,000 (or about half as much as a great Wagner tenor now gets for one evening) by four months' work as conductor of the Philharmonic orchestra. "I have no business to be here," he writes; and after the performance of a "Lohengrin" fragment:

"I felt this time especially, with deep sorrow, how sad it is for me to have to come before the public always with such very meagre extracts from this work. I appeared quite absurd to myself, because I know how little people can learn about me and my works from this poor little 'sample card,' with which I'm travelling about like a *commis voyageur*. And thus I spend my best years, with my artistic activity completely hindered as regards my coming before the public."

With the Londoners of half a century ago Wagner had little in common; nor did he try to conceal the fact:

"Anything more objectionable than the real, genuine English type I cannot conceive. The prevailing type is that of the sheep; and the Englishman's practical sense is as sure as is the instinct of a sheep for finding his fodder in the meadow. . . . The people are as pleased with the dullest stuff as with my music; and quite as much as my own performances, they applaud, on the following day, performances of the most atrocious kind. . . . Well, everything will turn out all right, and I shall bring 1,000 francs with me. . . . This much is certain. I am not in the world to earn money, but to create, and the world should see to it that I can do this *undisturbed*. . . . Well, I have committed a folly, and however hard it may be for me, I have decided to hold out to please my wife, who otherwise would be greatly troubled. . . . My sojourn in London has been very detrimental to my work. It has put me back almost a year, as my spirit is now so exhausted that for the rest of the year I must be satisfied if it proves equal to 'Die Walküre.'"

Of the remaining articles in this suggestive volume the most interesting relate to "The Art of Pantomime Ballet" and "The Libretto of the Future," both of which should be read and pondered by creative as well as by performing musicians.

The Story of the Vine. By Edward R. Emerson. G. P. Putnam's Sons. 1902. 8vo, pp. 252.

For a diner with Duke Humphrey and a pint of red wine this volume may serve to enliven his repast, and can be agreeably read through in the sitting. It runs on like a brook in springtime, busy in an idle way, and plentiful of those anecdotes of which nobody with any pretension to wine-wisdom can decently be ignorant. It runs on without cessation or stint in its aqueous stream, unchoked by hard facts, its limpidity unmuddled by any ideas but the simplest. That we should do well to drink, in careful moderation, of pure and good American wines, that American wine-growers should strive for quality and not be too much in haste to make money, are the chief burdens of its song. The author seems to have lent his European trips an interest by occupying himself with the study of œnology, and, without troubling us with technical details, he distils for us the moral of his experience. He is quite confident that there is no better cure for the dram-drinking habit than the use of pure and wholesome wine. He remarks how

the population of the Moselle valley believe in the health-giving quality of their wines, which they drink so copiously, and reminds us that the most celebrated of their *crus* (and we may add the least obtainable) owes its name, the Berncastler Doctor, to that faith. Beside that fact he might have noted the cautiousness with which the neighboring Burgundians taste of their richer vintages. It is enough to walk along the streets of Macon or Dijon to be persuaded that the most delicious wines are not always the most innocuous. They are too high and good for human nature's daily food. As a rule, expensive wines enjoy great renown for their wholesomeness; but perhaps the two facts that one does not drink them unmeasured, and that after them one does not relish an inferior wine, have had their influence on this dogma.

The principal question about any book is how far it accomplishes its purpose. This one is, like a light wine, intended chiefly to be agreeable and wholesome enough; and these ends it fully attains. It has as much body as Moselblümchen. Nobody ought to require great accuracy of statement or thought in such a work. One can be assured that it contains entertaining matter, and that nothing of that sort has been ruled out without a better reason than that its connection with the vine is slender.

BOOKS OF THE WEEK.

Adams, C. F. Lee at Appomattox, and Other Papers. Houghton, Mifflin & Co. $1.50.
Annual of the British School at Athens. No. vii. Macmillan.

Maine Coast.

FOR SALE—On Penobscot Bay, A beautiful tract of 400 acres, with nearly four miles of shore front. The property comprises a number of bold headlands, fine rocks, coves, and beaches; is much diversified in its surface with woodland and open fields, and commands everywhere most exquisite views of bay, islands, mountains, and ocean. There is a steamboat landing near the tract, giving daily connection with trains and boats to and from Boston. The property is on the main land, within five miles of Islesboro and Castine. It has several farm-houses, a pond, and trout brook. It will be sold at a low price per acre to settle a joint account, and offers an exceptional opportunity for a gentleman wishing an independent estate, or for subdivision. Address,
J. MURRAY HOWE, Trustee,
28 State Street, Boston, Mass.

EDWIN LAWRENCE GODKIN.—Japan proof of Portrait, engraved on wood in the highest style of the art, sent, charges paid, on receipt of five dollars ($5) by Gustav Kruell,

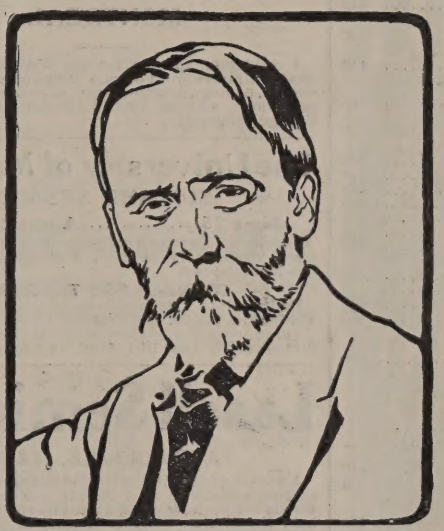
"Will be one of the Summer's favorites."

MR. CABLE'S NEW NOVEL

"Though really a psychological novel, the superficial reader would scarcely know it. Mr. Cable is too fine an artist to lumber his fiction with psychological analysis. He tells his story in the form of incidents and dialogue, and his characters are alive and natural."

—*Chicago Record-Herald.*



The scene is laid in Massachusetts, and the story is illustrated in color by F. C. YOHN.

BYLOW HILL

"THE casual reader will see in the depictings of dramatic situations, the portrayals of the passion of lacerated souls, only a romance of unusual power. But 'Bylow Hill' has a deeper meaning; it portrays the work of an avenging conscience. . . . It is very strong and masterful."—*Brooklyn Eagle.*

$1.25

"A NOVEL THAT MUST BE READ"

A PASTEBOARD CROWN

A Story of the New York Stage

By CLARA MORRIS

Brooklyn Eagle — "A very strong novel, full of dramatic situation and crisp and clever dialogue. From beginning to end the book sparkles. Its dramatic intensity grows with each succeeding chapter; seldom is a plot so well managed, the climaxes so fittingly arranged. . . . She has demonstrated anew that she is a woman of genius."

Philadelphia Record. — "There will be a good many wiseacres who will wink knowingly and declare that they could name the historic originals if they would. We ourselves could here hazard a guess out of recent history as to the true identity of the hero and heroine. . . . Her descriptions of stage scenes are splendid."

THE NEW BOOKS OF THE LAST WEEK

Miscellaneous

GEORGE ELIOT

By LESLIE STEPHEN *Cloth, 75 cts. net (postage 8 cts.)*

A new volume in the ENGLISH MEN OF LETTERS Series, edited by JOHN MORLEY.

The Author of "A History of English Thought in the Eighteenth Century," and Editor of "The Letters of John Richard Green," has made the life and writings of GEORGE ELIOT the subject of criticism so sane, wise and full of the saving grace of humor as to make the topic itself seem fresh.

THE STORY OF THE MORMONS

FROM THE DATE OF THEIR ORIGIN TO THE YEAR 1901.

By WILLIAM ALEXANDER LINN

Sometime Managing Editor of the New York Evening Post. *Cloth, 8vo, $4.00 net (postage 21 cts.)*

The book shows Joseph Smith's first idea of Revelations and Sidney Rigdon's connection with him; traces the successive moves of the Mormons, Brigham Young's reign in Utah, and the operations of the Church to 1901. It is illustrated with fac-similes of pages from the Mormon Scriptures, etc.

UPLAND GAME BIRDS

By EDWYN SANDYS and T. S. VAN DYKE

Illustrated by Louis Agassiz Fuertes, A. B. Frost, J. O. Nugent, and C. L. Bull. The Second Volume of *The American Sportsman's Library*, edited by CASPAR WHITNEY, in which the first volume, on "The Deer Family," by THEODORE ROOSEVELT and others, has just appeared.

Bound in cloth, cr. 8vo, gilt tops, $2.00 net (postage 15 cts.). Half levant, on handmade paper, $7.50 net. (Sets only.)

THE PHYSICAL GEOGRAPHY OF NEW YORK STATE

By RALPH S. TARR

Professor of Dynamic Geology and Physical Geography at Cornell University, author of "Elementary Physical Geography," etc. *Cloth, 8vo, 383 pp., $3.50 net (postage 23 cts.)*

A regrouping of twelve articles published at the request of the American Geographical Society in the Bulletins of the Society between 1896 and 1900. A chapter on Climate is supplied by E. T. TURNER.

In Fiction

THE VIRGINIAN

A HORSEMAN OF THE PLAINS.

By OWEN WISTER *Illustrated by ARTHUR I. KELLER.*

Published May 30. Second Edition Just Ready. Cloth, $1.50.

A story of the genuine cowpuncher and the vanished world of the old-time cattleman, one that "is human and alive. It has the 'touch and go' of the vibrating life of the expansive American West, and puts the country and the people vividly before the reader."—*Philadelphia Times.*

"Mr. OWEN WISTER has surpassed his 'Lin McLean' in another story which comes near to the heart of essential Americanism.—*The Dial.*"

OLDFIELD

A KENTUCKY TALE OF THE LAST CENTURY.

By NANCY HUSTON BANKS *Published May 28. Cloth, $1.50.*

"If one wishes for a few brief hours to slip away from the strenuous life in fiction and in fact, it is worth while reading *Oldfield*—a quaint, unusual story, marked by much fine feeling and beauty of expression."—*The Bookman.*

To the above may be added, not as an issue of the week, but as the book most in demand,

DOROTHY VERNON OF HADDON HALL

By CHARLES MAJOR *Illustrated by HOWARD CHANDLER CHRISTY.* *Cloth, $1.50*

COMMENTS OF THE PRESS

"The story has brains, 'go,' virility, and originality."—BOSTON *Herald.*

"May be commended to those who love a good love story."—CHICAGO *Record-Herald.*

"It is a bright romance, dramatic and picturesque."—NEW YORK *Tribune.*

THE MACMILLAN COMPANY 66 FIFTH AVENUE NEW YORK

The Nation.

NEW YORK, THURSDAY, JUNE 5, 1902.

The Week.

Mr. Gallinger of New Hampshire offered a resolution in the Senate, the other day, directing the Committee on the Judiciary to make an inquiry into the subject of lynching, and to report "whether, under the laws and Constitution of the country, there is any remedy for the evil." Mr. Gallinger is not a statesman of high rank as a Constitutional authority, and he frankly admitted that he very much questioned whether the Federal Government can do anything in the premises; but he rightly urged that an authoritative statement from the Judiciary Committee would be valuable. His resolution brought from Mr. Hoar the interesting and important statement that the Committee had already had the question before it. It appears that Mr. Albert E. Pillsbury, ex-Attorney-General of Massachusetts, drew a bill directly providing for the trial and punishment of such offences in the United States courts, sent it to Washington, and accompanied it with "a very able brief." But the Committee could not bring themselves to accept his view, and, by a unanimous vote of all the members present, Mr. Hoar was instructed to make a report to that effect, and to recommend the indefinite postponement of the measure. Apparently this action settles the question. The only way for the nation to stop lynching is to bring the public sentiment of the country to bear upon every guilty community, and thus to develop everywhere the feeling already manifested occasionally, and in the South as well as in the North, that sustains officials who refuse to surrender criminals to mobs, and who are ready to shoot even their own neighbors when they try to break down all law.

It is curious that Southern politicians and Southern newspapers should so generally treat the President's reference to lynchings, in his Memorial Day address, as a "sectional deliverance," and an attack upon one part of the country which is without precedent and without justification. Mr. Roosevelt's language on this subject was evidently chosen with care, and there is not a word or an implication of special reference to a particular section in this statement of a condition which is of the first importance to our national reputation: "From time to time there occur in our country, to the deep and lasting shame of our people, lynchings carried on under circumstances of inhuman cruelty and barbarity—a cruelty infinitely worse than any that has ever been committed by our troops in the Philippines; worse to the victims, and far more brutalizing to those guilty of it." Nor is there the slightest intimation of a sectional allusion in his further statement of an undoubted truth: "The men who fail to condemn these lynchings, and yet clamor about what has been done in the Philippines, are indeed guilty of neglecting the beam in their own eye while taunting their brother about the mote in his." Nothing could be more proper than the improvement by the President of a fit occasion for driving home the national disgrace that lynchings prevail in so many parts of the United States, and are so frequently accompanied by frightful barbarities, as in the recent burning to death of a negro in Texas, and similar atrocities in one of the chief cities of Kansas last year, and in a Colorado town the year before. President McKinley devoted a passage of his inaugural address in 1897 to this question, and in his annual message two years later repeated what he had then said, including the declaration that "lynchings must not be tolerated in a great and civilized country like the United States." Should we regard England, France, or Germany as a civilized country if every few months we read in the cable dispatches accounts of how mobs burned criminals—or alleged criminals—alive at the stake, inflicting the most frightful tortures upon their victims before the end came?

Let no guilty man wholly escape is the rule laid down by President Roosevelt for the wearers of our uniform in the Philippines. At all events, that is his decision in the case of Lieut. Preston Brown, Second Infantry. This officer, a Kentuckian by birth, was tried by court-martial at Manila for murder. The specification was that he "did wilfully, feloniously, and with malice aforethought, murder and kill by shooting with a pistol an unarmed, unresisting native Filipino, name unknown, a prisoner of war in his charge, and as a result of said shooting the native did then and there die." On this charge he was tried by a court-martial of his brother officers and found guilty, except that the word "manslaughter" was substituted for "murder." The sentence of the court was that Lieut. Brown should be dismissed from the service of the United States, and then be confined at hard labor in the United States penitentiary for the period of five years. On the 27th of January this sentence was commuted by President Roosevelt to a falling back of thirty-five points in the line of promotion, and to a forfeiture of one-half of his pay for nine months, and thereupon he was restored to duty. Such severity to a member of one of the proudest families of Kentucky for the mere killing of a "nigger" was astounding. Lieut. Brown was naturally indignant. He appealed to the President against the harshness of the thirty-five points and the docking of his pay. The President has set his face like a flint against any further reduction of the sentence. He is determined that the guilty shall be punished.

That Secretary Root is learning to adapt himself to the tone of the Roosevelt Administration is shown in his prompt publication of the report of Gov. J. G. Livingstone of the province of Sorsogon. The report itself is painful reading for any American. It tells how an American officer first extorted a confession from a presidente and a policeman, by half strangling them, and then, upon the evidence thus obtained, shot them summarily. Gov. Livingstone reports:

> "Upon careful consideration of the whole question, from my knowledge of the conditions existing at the time, and from my personal knowledge of those most directly concerned, I am forced to the opinion that the original order for the arrest of these men was absolutely unwarranted, possibly due to malinterpretation and overzealousness on the part of the corporal; that the two prisoners killed did not attempt to escape, and that their killing was murder."

Capt. E. Wittemeyer, who files a report for the army, adduces as evidence only his personal conviction, supported by the fact that the presidente had cared for wounded Filipinos after an engagement with the Americans. It was this ordinary act of humanity which an American officer interpreted as giving "aid and comfort" to the enemy, and punished with the death penalty. This reasoning would justify the summary execution of Red Cross nurses while engaged in their work of mercy.

Whether Gov. Livingstone is right in this matter or not, Secretary Root deserves credit for publishing the report fearlessly, and without waiting for the result of a necessarily prolonged examination. This action is in gratifying contrast to his treatment of the Gardener report, and one must welcome it as the end of that practice of suppression and apology which always had an incongruous look under the Presidency of Theodore Roosevelt. It is better for all concerned to know just what this war against the brown men means. If these reports of atrocious cruelties are exaggerated, suppression merely heightens the horror, which only publicity will dispel or reduce to its true proportions. If they are true, the defenders of the present policy in the Philippines should be forced to

acknowledge the moral cost of conquest, and the army should be permitted to punish those who bring shame upon it. For a worse shame than the outbreak of brutality is the attempt to smooth over the fact, to call it an inevitable concomitant of war, or to deny that the outrage has occurred. President Roosevelt and Gen. Chaffee have, by their words and acts, insisted that the army shall be spared the ultimate disgrace of failing to atone for the crimes which, though committed by a few, must, until condemned, be shared by all. Secretary Root, in publishing freely one of the most unpleasant reports which have reached him, has definitely put himself in line with this sentiment. Better late than never. The comments of those newspapers which were his apologists in the Gardener case will be awaited with interest.

The gist of the Philippine deliverance of the Ohio Republicans on May 28 lies in two sentences: "Our title to the islands is perfect"; "Our flag is in the Philippines, and there it will remain." The growing sense of the country that all this talk about the title and the flag is but a "dark lanthorn of the spirit," was strikingly brought out in the action of the American Unitarian Association at Boston on May 27. This body of clergymen and Christian laymen, representing all parts of the country, were less anxious to boast about title and flag than they were to express their "concern for a just, honorable, and humane settlement of the difficulties with the Philippine Islands." Accordingly, after a free and full debate, they adopted resolutions which breathe a spirit of fairness and moderation, and which, for sheer statesmanlike grasp of the affair in hand, leave the Ohio platform looking like the resolves of a boy's debating club. We reprint this measured and admirable utterance of an American religious assembly:

> "With generous allowance for all the undoubted embarrassments of the situation, without criticisms or reflections upon those who are called to deal with the situation in counsel or in the field, without passion, prejudice, or partisanship, remembering that magnanimity is becoming to the strong when dealing with the weak, and aiming only at the end of that righteousness which exalteth a nation, we respectfully pray the President and the Congress of the United States to take such prompt and efficient measures as may *replace the present measures of coercion with a policy of conciliation and good will*, and we pledge our support to the President in his desire to secure for the people of the Philippine Islands *self-government after the fashion of really free nations*."

By thus taking a lead among religious gatherings, the American Unitarian Association has furnished what will be a landmark in the history of the Philippine agitation.

There is a chance that Uncle Sam may yet save the $5,000,000 that he has promised to his Danish Majesty in exchange for the uncertain harbor of St. Thomas and two or three uplifts of rock in the West Indies. It seems that his Danish Majesty has not been able to persuade his upper house of Parliament to ratify the treaty; and, the time limit being about to expire, an agreement was made to extend the ratification for one year. Whether the proposal to extend it came from Uncle Sam, who felt the money burning a hole in his pocket, or from his Majesty of Denmark, who felt a vacuum in his own, is immaterial. The whole question is put over till the next election for members of the Landsthing. Meanwhile we might enter into negotiations with France for the island of Martinique or with England for St. Vincent. No doubt they could be had cheap. The fact that they are suffering some temporary inconveniences from volcanoes ought not to count. For naval purposes there is not much to choose between earthquakes and volcanoes. It is notorious that St. Thomas is liable to earthquakes, and that we want St. Thomas as a naval station to protect Porto Rico and to maintain the Monroe Doctrine. With such noble ends in view, why should we draw the line at volcanoes?

Secretary Root has come forward, in his usual straightforward way, to assume the entire responsibility for those extraordinary payments which figure in Gen. Wood's Cuban accounts. They were made, it appears, with the sanction of the War Department. This, however, does not relieve them of a queer look. It was pretty well understood all along that our military government was subsidizing Gen. Gomez and other Cubans for the purpose of convincing the natives of the blessings of our rule; but to have the formal documents spread out before us, showing payments of thousands of dollars "for personal services to the island," with no vouchers required, is something of a shock to American notions. If the Spaniards had done this, we should have called it bribery; in ourselves it merely reveals a native shrewdness, demonstrating our great talent for governing subject races. When the Philippine accounts come to be published, we shall doubtless find many similar entries, in addition to that tribute which we openly pay, by treaty, to a slaveholding and polygamous Sultan. Such revelations place in its true light the pious but infinitely simple-minded opinion which Civil-Service Commissioner Foulke has recently expressed—namely, that "the perfect consummation" of governmental reform "may come from Manila to Washington."

The House of Representatives has passed a bill prohibiting the coining into silver dollars of any more of the silver bullion in the Treasury purchased under the Sherman Act of 1890. The silver purchased under that act, and against which the Treasury notes of 1890 were issued, was mostly held in the form of bullion until 1898. An act was then passed authorizing its coinage into dollars at a certain rate per month, and in 1900 another act required the Secretary to cancel Treasury notes of 1890 as fast as they came into his possession and to issue silver certificates in place of them, and to lay aside a corresponding amount of silver dollars for the redemption of such certificates. Now the bill passed by the House requires that all the silver still uncoined shall be kept for future subsidiary coinage. It does not require the Secretary to produce these subsidiary coins any faster than they are needed. The rate at which they shall be turned out is properly left to his discretion. After all the remaining bullion is coined in this manner, the Secretary may convert silver dollars into subsidiary coins as the public necessities may demand. Of course, this clause refers to the silver dollars owned by the Government, not to those held against certificates in the hands of the public. Under the operation of the act of 1898, the amount of "fiat money" in existence was increased by the amount of the seigniorage on the silver dollars turned out. This production of forty-cent dollars will be stopped if the bill becomes a law. It is no great matter, but the principle of the House bill is right, and we hope that the Senate may concur in it.

It is now proposed by the Committee of Ways and Means to kill all seals in the Pribyloff Islands except 10,000 females and 1,000 males, unless means can be devised to put a stop to pelagic sealing. This looks like killing the seals in order to save their lives. It would actually be killing the greater part of them in order to save the small remainder, and it is not an irrational plan; for if the total number is reduced so that it is unprofitable to fit out ships to capture them in the open sea, they will have opportunity to increase and multiply once more, and possibly regain their old number. The bill proposed by the Committee authorizes the President to open negotiations with Great Britain for a review of the existing regulations in order to preserve the seal industry from extinction, failing which the drastic remedy before mentioned shall be put in force. There is little doubt that Great Britain will accede to the proposal. It is probable that she will see the necessity of some radical change in the rules; but the question how to enforce the rules will be the most difficult one to deal with. As the number of the catch diminishes on both land and sea, the interest of either country in protecting the herd diminishes also.

Neither one has much motive now to keep a fleet patrolling Bering Sea, and it is a debatable question whether any force that can be spared from the navy of each can prevent pelagic sealing so long as the seals are numerous enough to tempt men to go after them. One thing has been proved, however, by the experience of the past five years. It has been shown that the law which prohibits the importation of sealskins and seal garments into this country has had no effect whatever to preserve the race from destruction. Nobody can suppose that one seal exists to-day that would not have existed if this non-importation act had never been passed, but many women have been grieved and much bad blood has been engendered by customs officers confiscating sealskin muffs and capes and cloaks, even from the hands and backs of arriving passengers; and yet the officers were only doing their duty under the law.

The most interesting feature of the late Oregon election was the submission of a Constitutional amendment applying the principle of the initiative and referendum in legislative matters. This amendment recites that, while the legislative power is vested in a Legislative Assembly, consisting of a Senate and House of Representatives, yet "the people reserve to themselves power to propose laws and amendments to the Constitution and to enact or reject the same at the polls, independent of the Legislative Assembly; and also reserve power at their own option to approve or reject at the polls any act of the Legislative Assembly"; and it is consequently provided that, whenever 8 per cent. of the legal voters petition for specific legislation, the same shall be submitted to popular vote, and shall become law if approved by a majority voting thereon; that any enactment of the Legislative Assembly may be submitted to popular vote by such Assembly, acting voluntarily, and must be when requested by 5 per cent. of the voters; and that the veto power of the Governor shall not extend to enactments voted on with approval by the people. This amendment had to be approved by two Legislatures before submission, and but one vote was cast against it the second time, while both of the great parties were committed to it during the recent campaign, and there seems to have been practically no opposition to it.

The most that can be said of the coal strike situation, at the moment, is that a long interruption to anthracite mining seems to be foreshadowed. Expert observers who have visited the scene of contest agree unanimously that the men who have quit work are disposed to prolong the period of inaction, and are able to face the stopping of their wages—having accumulated savings or else expecting a chance at outside labor. On the other hand, the mine-owners, who are able to put non-union workers at the pumps, cannot, apparently, replace the miners. The laws of Pennsylvania require that the work be superintended by a "certificated" miner, who has had two years' experience in the mines, and it appears to be precisely these miners who have struck. Rioting is, of course, always a possibility; but it is checked by the fact that the laborers have quit work because they could afford a space of idleness, and that no attempt at resumption of output from the mines is made. In brief, the one party to the case whose rights are ignored and trampled on is the outside public. The public foots the bill for this "labor war," whose real causes the Union still declines to state and outsiders are still unable to discover.

Newspaper enterprise has to bow to scientific enthusiasm in the matter of the first ascent of still smoking Mt. Pelée. Prof. Angelo Heilprin was already known as an intrepid explorer, delighting equally in Sahara and in Greenland, and climbing difficult Orizaba, whose height and preëminence among Mexican mountains he first correctly determined; but his calm rivalling of the elder Pliny—and surpassing him in good fortune—by mountng to study, *in situ*, a volcano in eruption, will make his name famous throughout the world. Of that result, however, we may be sure that he never stopped to think. His preoccupation was entirely that of a scientist, bent on discovery of the truth, even at the risk of his life. With intelligence to guard against every needless risk, and yet with constancy and professional zeal to make him face cheerfully all inevitable danger, he gave a fine example of the unconscious courage and heroism of the scientific spirit. No doubt he experienced intense exhilaration, amid those showers of boiling mud and red-hot cinders, as he went on quietly observing the phenomena which his trained eye could so well interpret. He performed a real service to human knowledge, and, as all journalists must admit, scored a tremendous "beat."

The elections of the Provincial Parliament of Ontario, which were held on Thursday, are of more than provincial importance, because, first, Ontario, the largest and most prosperous province of the Dominion, is unstable politically, the French and British elements fairly balancing each other, while, second, the Ontario Conservatives ousted the Liberals in the Dominion election of November, 1900, when the returning 53 out of 92 members was the sole advantage in an otherwise disastrous defeat. This advantage they have failed to hold in the Provincial election, for Premier Ross is returned with a majority of 4 in a house of 101. This reduces seriously his former majority of 10 in a House of 94. One must hope that this indicates rather a reaction of sentiment among the Liberals themselves than any substantial gain for the Conservatives. The Ontario Liberals generally have, contrary to the traditions of their party, gone in for high protective duties and for Provincial subsidies on a large number of manufactured articles. The Conservatives are so thoroughly committed to these policies, that they have had to make their campaign on virulent and apparently exaggerated charges of political corruption, while so able a paper as the *Mail and Empire* has been reduced to offering, day by day, as a political argument, the platitude that an occasional change of administration is conducive to the health of the body politic. The Liberals, on the other hand, have put forward only the argument of general prosperity and of letting well alone. Premier Ross has been fairly unctuous in promising the *poule au pot*, and it is to be hoped that his reduced majority is an indication that the Ontario Liberals are beginning to turn from paternalism to the authentic traditions of their party. There are, in fact, gratifying signs that blatant Imperialism has pretty well run its course in Canada, and one even hears of Liberals who are bold enough to inveigh against subsidies and to hint at tariff reduction.

M. Waldeck-Rousseau's resignation, formally announced last week, finds its explanation partly in the state of his health, partly in the internal difficulties of the present Cabinet. Of his associates it is said that only three—the Ministers of Finance, Foreign Affairs, and Education—can, or will, continue to serve. The withdrawal of the Socialist Minister of Public Works, M. Millerand, would seriously affect the Government's strength in the Left; it would be difficult to find any one so acceptable as Gen. André for the War Ministry, while M. Lannessan, who absurdly attacked certain religious observances traditional in a navy largely manned by Breton and Meridional Catholics, leaves his department in ill repute. These facts show plainly enough the wisdom of M. Waldeck-Rousseau's decision. If he really means to retire, he can hardly find a time when greater honors will attend his retreat. If he merely refuses to face a drastic reorganization of the present Cabinet, he does well to let the Cabinet resign. After one or two others have wrestled with the situation, he could return with all the greater prestige, and form a government unhampered by old obligations. Though purely selfish interests would undoubtedly counsel his permanent retirement, one must hope that return to power is not excluded from his plans.

PEACE—AND AFTER.

The end of the South African war finds all England, and nearly the whole world, ready to agree with the saying which, two years and a half ago, was gall and wormwood to the Jingo tribe —"There never was a bad peace." In the first general rejoicings over the cessation of hostilities, it would be in vain to review the course and causes of the war, to discuss the question whether a wiser statesmanship might not have prevented it altogether, or to inquire what further chances the Boers would have had if they had taken counsel of desperation. The war is over—that good news will stop recrimination and allay partisan clamor for one day at least. But the morrow will come when the bitter struggle will stand out in its true perspective; when the problems of peace will appear almost as appalling as the difficulties of the war; and when the future of South Africa, together with the readjustment of parties and of the Government in England, will be seen to be the great questions of the hour.

As for the war, it speaks for itself. Begun for ostensibly trivial reasons, it shook the pillared strength of Great Britain. Its terrible losses, its enormous cost, its heaped-up misery, its legacy of inhumanity and of hate—these are so many warnings, written in letters of fire, to stand hereafter before the eyes of any Minister or President who may be tempted to let loose the incalculable passions of war. As a horrible example of what war is, as the most vivid kind of deterrent, the South African contest will long serve a useful purpose. How low it brought the pride of England may be inferred from the open admission of Admiral Lord Charles Beresford the other day, "We must not forget that our colonies have pulled us through this war." It will be long before another Secretary for the Colonies imperils the Empire by needlessly bringing on such another.

The exact terms of peace were announced in the Commons on Monday. They are even more conciliatory than had been anticipated, and include full pledges of aid and recuperation to the Boers. This is in good keeping with the tactful language of the King, who hastens to appeal for appeasement of the old rancors, and to speak of Dutch and English now working harmoniously for the restoration of their "common country." It was time that this generous note was sounded. There seems little reason to doubt that peace might have been had on such terms a year ago. But at that time Mr. Chamberlain disallowed Gen Kitchener's proposals to Gen. Botha, and would hear of nothing but unconditional surrender. The surrender has come, however, on conditions, showing that, as Lord Rosebery said last week, in retort for one of the Colonial Secretary's own flings, "Mr. Chamberlain is a good judge of recantations." The heroic burghers are at least to be permitted to keep their own arms and to speak their own tongue, while they are to be helped back, if they wish to go, to their own farms.

We confidently look for the better traits of England's colonizing policy to appear in the carrying out of the South African settlement. There is still truth in what a British statesman wrote long ago: "Englishmen delight in a fair fight and a fair victory; but nothing is so revolting to them as anything which bears the semblance of ungenerous treatment of a fallen enemy." The task of binding up the wounds of the war will be immense. South Africa is practically a waste. A large part of its only true farmer population is now imprisoned in Bermuda and St. Helena, in Ceylon and in India. Twenty-five thousand, mostly young, are now in captivity. The hope of the Transvaal and of Orange River Colony lies in the restoration of these Dutchmen to their lands. Johannesburg cannot for ever furnish gold, nor Kimberley diamonds. In the cultivation of those great stretches of upland will be found the true and enduring wealth of the country, and the work will have to be done by the Boers, if at all. There will be no considerable English immigration. That the Government perceives this, and is alive to the need of restoring the Boers to the veldt, is shown by the provision of a large sum of money to aid them in restocking their farms, and also in the stipulation that no tax shall be levied upon land in the Transvaal to help pay for the cost of the war.

The settlement is a supreme illustration of the value of magnanimity. It has been late in manifesting itself, but in the end it is unmistakable. The furious and futile proclamations of Mr. Chamberlain in September last, threatening confiscation and exile, were quietly thrown into the waste-basket, and terms of peace arranged on a rational and even generous basis. It is needless now to debate the question whether the war was not unnecessarily prolonged by at least a year, through refusing conditions twelve months ago which are now conceded. What is certain is that if the war was a Conservative war, the peace is a Liberal peace. It is so in the sense that the terms finally made are substantially those which Mr. Bryce and John Morley and the other spokesmen for the old Liberal tradition have been urging upon an unwilling Government for more than a year. However the thing was brought about, whether by pressure from the King or the dawning of a better mind in the Cabinet, the final settlement is as magnanimous as it is judicious.

The example ought not to be lost on the world. To Americans in particular, with a somewhat similar problem of pacification and settlement pressing upon them for solution, the wisdom of the course finally adopted by Great Britain should peculiarly appeal. We, too, have taken our stand on "unconditional surrender," as mistakenly as Chamberlain did after Lord Roberts had reached Pretoria. Our Government has seemed to want to see all the Filipinos crawling to our feet, with halters about their necks. Like the British, we have talked of our intention of being lenient and generous, but have insisted that the men in arms against us should show themselves thoroughly cowed and broken-spirited before we would make them a single pledge, or even enlighten them as to their future. But the English got bravely over that in their attitude towards the Boers. Why should not we be as wise betimes in our dealings with the Filipinos?

We are very hopeful that the example in South Africa will hasten the advent of a more conciliatory policy in the Philippines. International relations are nowadays of great influence in such matters. Nothing can be done in a corner any more. If there has been a competition between Great Britain and the United States, to see which could exhibit most of the bitter and blundering spirit of Imperialism, there may be now a rivalry in peace-making. Certainly we cannot any longer justify our obstinacy in the Philippines by the stubbornness of the English in South Africa. They have acted at last almost in the temper of Gladstone, who was said to be the only English Prime Minister that ever allowed himself to be guided, in foreign relations, by his heart as well as his head. It is high time our heads were persuaded that our best weapon in the Philippines would be a friendly and thoroughgoing effort to find out what the natives want, and then give it to them.

Another pertinent example is furnished us in the experience of Germany in Samoa. A Foreign Office report details the success of the methods adopted in that island by the German Protectorate, since the international agreement of 1899. The main feature of the policy has been a deliberate consulting of native feeling. This was carried so far as to make Mataafa "High Chief" of Samoa. He, it will be remembered, was the able man, vouched for by Stevenson, who led his people in arms against the German Government. But he is the one Samoan who has the confidence of his people, and the German administration was wise enough to utilize him, and to make him, as the report explains, "the channel through which the Governor's wishes and commands are conveyed to the Samoans." The case is very much as if we had taken Aguinaldo and made him Governor of Luzon. This was exactly the course urged upon our Government

by Sir George Clarke, experienced in Malay administration, but, of course, we were then far too proud to learn of others. We are humbler now.

THE PRESIDENT SAYS "INDEPENDENCE."

President Roosevelt's Memorial Day address at Arlington was certain to catch the attention of the country. As was fitting, it passed quickly from the recalling of past sacrifices and glories to present problems and duties; and chief place among these it assigned to our national task in the Philippines. But the significant, the strategic thing, is that, in discussing the future of these islands, the President for the first time used the word "independence," and distinctly contemplated the possibility of an ultimately independent Philippine nation. President McKinley never spoke the fatal word—though he never said he would not speak it. It was employed by Senator Spooner two years ago; and on Thursday, in the Senate, he renewed his opposition to "permanent dominion" in the Philippines. Secretary Long referred some weeks since to Philippine independence as an "academic" possibility; but now comes the President of the United States to declare that independence may be the necessary culmination of our efforts to give the Filipinos freedom from Spain and a stable government of their own.

This is a deliverance of capital importance. Sometimes words are half-battles. The studious avoidance of the word "independence" by President McKinley, and by President Roosevelt until now, has made it possible for Republican politicians and newspapers of the baser sort to attaint for treason all champions of an independent Philippine nation. But that will be possible no longer. The President himself has said it. All the old circumlocutions and ambiguities about the "best possible government," and "as good a government as the Filipinos are capable of," are now to be interpreted in the light of ultimate independence. The case recalls the great difficulty with which Mr. McKinley was dragged up to the utterance of the word "gold" in the campaign of 1896. He used every possible amphiboly to avoid it; spoke of the "best possible currency," of money as "unquestioned as the flag," and all that. But it would not do. Finally he took his courage in both hands and said "gold." Then the country marched on to the establishment of the gold standard. Similarly, Mr. Roosevelt has now said "independence," and our goal in the Philippines shines before us in that word.

In this speech of the President's we have the deliberate and official gloss upon his extemporaneous declaration, the other day, that our flag in the Philippines would "stay put." Undoubtedly he means that the flag shall "stay put" until the work which it was sent there to do shall be accomplished; but that work he now describes as "the slow introduction of the orderly liberty, the law-abiding freedom of the individual, which is the only sure foundation upon which *national independence* can be built." And he distinctly says that the day will come when the question will have to be settled whether the Philippine nation is to exist "independently" of us. Then it has not already been settled. We have, therefore, in this carefully prepared speech of the President, which goes to the people with the dignity and solemnity of a Presidential message, an official admission by our highest authority that work for Philippine independence, by Americans and by islanders alike, is not the hopeless and treasonable thing it has been violently denounced as being, but is something that is vitally connected with the end and aim of our being in the archipelago at all, and that may lead to as glorious a furling of our flag in Manila as the one we have just seen in Havana.

For us this is the great hope and inspiration of the President's address. He may be building better than he knows; yet he can scarcely have been in doubt about the immense significance which will necessarily attach to his bold reference to Philippine independence. It is refreshing to find him not only thus courageous, but also so keenly alive to the great blessing which freedom and self-government are *per se*. This is the true American view-point. It is one which foreigners find it difficult to understand. The English lecturer on colonization at the University of Chicago, for example, takes Mr. Charles Francis Adams to task for asserting that "schools, roads, irrigation" are not as good for a people as free self-government. Mr. Ireland cannot grasp that. To him it seems almost like anarchistic doctrine. So it did to Napoleon III. Under his tyranny France was prosperous, so why on earth did Frenchmen want to think and speak with freedom? "Oh dear, yes," said a patriotic Frenchman to an English visitor in 1860, who asked if the people could not do as they pleased—"Oh dear, yes, if we wish only to eat, drink, and make money, we can do exactly as we please." But there are richer gifts in liberty's hand than clothing and food. President Roosevelt's oration shows that he is fully aware of that; and he speaks up for the life of the freeman which is more than meat and better than raiment.

If it is right for the President to say to Americans that the Filipinos may be independent, it is right for him to say it to Filipinos. If it is proper for the President to say it, it is proper for Congress to say it. Thus we come very close to Senator Hoar's position that the one healing and pacifying measure for the Philippines would be an official and solemn assurance by this Government to the inhabitants that they shall be independent as soon as, in President Roosevelt's words, "they have shown their capacity for real freedom by their power of self-government." Such a promise, duly authenticated, and immediately made the norm of all our conduct in the Philippines, would release our troops by the thousand, and would advance civilization in the islands faster than it can ever be got forward on a powder-cart. Then why not give it? Senator Spooner declares that we can make no promise to a man who holds a pistol at our breast. Yes, but if he holds it there because you have left him in ignorance of what you want; if your rifle levelled at his head is the only promise which you are actually giving him; and if a simple statement of your real and final intention would make him drop his pistol and enable you to ground your rifle, why is it not good military tactics and plain common sense at once to make it? What we are sure of is that we are brought immeasurably nearer to making it by the words spoken by President Roosevelt over the Union dead in Arlington.

THE CRAWFORD-HUMBERT MILLIONS.

In the early eighties, Thérèse Daurignac, a young peasant girl living near Toulouse, told her neighbors that, under the last will and testament of Robert Henry Crawford, a wealthy American, she had become sole heir to a fortune of 100,000,000 francs. This legacy, she explained, was an act of gratitude. When Crawford was stricken with illness on a railway train, her prompt ministration had saved his life, and she had later nursed him back to health. No caprice of an American *milliardaire* seems improbable in France, and Thérèse, who had the properly attested will to show, was promptly wooed and won by M. Humbert, whose father had been Minister of Justice.

A common adventuress would have rested at the capture of a wealthy and distinguished husband, but Mme. Humbert had only begun. Her legendary fortune was to be accepted far and wide as the equivalent of negotiable securities. To do this it was necessary, first, to obtain legal certification of the existence of the Crawford millions; second, to avert a demand to show the actual securities. At this juncture, two nephews of Robert Henry Crawford appeared, and opposed to the will which named Thérèse Daurignac as sole legatee, one of the same date and authority which, leaving a small annuity to Thérèse, divided the fortune equally between themselves, Robert and Henry Crawford, and Thérèse's younger sister Marie. It was

their uncle's dying wish that one of them should marry a Daurignac—either was willing to wed Marie—and thus unite the families of Crawford and Daurignac. Pending this amicable settlement of the dispute, Mme. Humbert and the Crawfords agreed that the 100,000,000 francs in securities should be sealed and deposited in Mme. Humbert's safe, not to be opened by her under penalty of forfeiting all claim upon the estate. Accordingly, a French notary certified—the law permitting this to be done without inventory—to the depositing under these conditions of 100,000,000 francs in approved securities; so that the Crawford millions gained legal standing, and became available as collateral.

Mme. Humbert, temporarily precluded from her inheritance, was soon obliged to raise loans upon this deposit. Her notes, "payable after the conclusion of my actions-at-law," were freely accepted by the banks. A Lille banker advanced 7,000,000 francs. She was on the books of a dozen other banks for sums ranging between one million and six millions of francs. Of her social successes at Paris, her great country places, her wonderful art collections, her ventures in commerce and finance, it would be superfluous to speak. Very few of her notes were ever paid, but the security was unquestionable, for every note was endorsed by her sister Marie, the alternative heir and the prospective bride of one of the wealthy Crawfords. It was in fact the activity of the Crawfords that was the most convincing proof that this great fortune existed. The Crawfords were a litigious lot. For upwards of fifteen years they fought Mme. Humbert in the courts, accepting compromises only to boggle at the terms of their execution, and, generally, exhausting the law's delay. But the Crawfords were generous, too, in a way; they were ever ardent suitors for Marie Daurignac's hand. Whenever Mme. Humbert's creditors pressed for payment, the happy marriage and the opening of the safe became imminent. The Crawfords would also on occasion take up Mme. Humbert's I.O.U.'s at par from uneasy creditors; thus manifesting their own unobtrusive kindliness and reëstablishing her credit.

So long as the Crawfords continued their losing fight, no one could doubt that the 100,000,000 francs actually lay under seal in Mme. Humbert's safe. But soon it was Mme. Humbert herself who, although she won suit after suit, and might at any time have taken out her millions, sought all manner of frivolous delays. The famous advocate, M. Waldeck-Rousseau, now Premier of France, pointed out this strange disinclination to enter into possession. He showed, too, that though everybody had heard of the Crawfords—as dining at Mme. Humbert's, as about to marry her sister, as about to testify in person—no living soul in Europe or America, except Mme. Humbert and her intimates, had ever seen them. This doubt as to the existence of the Crawfords and the inferential skepticism as to their uncle's millions Mme. Humbert met by finding a provincial magistrate who swore that he had seen and counted the securities. Something which he took for securities in quantity, he undoubtedly saw.

How for five years more she managed to delay the dénouement is matter of notoriety. She played upon the political and religious prejudices of a famous lawyer of clerical affiliations, and offered to a doubting world the undoubted probity of Maître Du Buit. It was his complete confidence in his client—a chance which she had to take—that led to the disclosure the other day. To terminate the unwarranted scandals which had gathered about Mme. Humbert, he, her lawyer, would open the safe in the presence of her chief creditors. Mme. Humbert's chimney took fire immediately, and she herself left her handsome residence a day or two before the opening of the safe. On the empty jewel case, the copper coin, the brass button, and the 5,000 francs in securities, it is unnecessary to dwell. These were all that appeared where the Crawford millions should have been; this was the total security for loans of 55,000,000 francs—half the amount of the fortune. The genius who had created the Crawfords was already upon the sea, with an unknown destination.

The clearing up of this extraordinary mystification awaits the arrest of the Humberts. There is no occasion for citing the hackneyed proverb, as *la femme* is evidently Mme. Humbert. Who were her confederates? M. Humbert, one may assume. But at what point was he enlisted? He apparently married his peasant bride in full confidence that she was the real heiress of an actual fortune. By what process of persuasion did his wife convince him that she could repay him handsomely for her deception out of the non-existent millions? Was it her father-in-law, the ex-Minister of Justice, who planned the endless lawsuits? Then, who played the part of the invisible Crawfords, who for a score of years were litigants at the French courts and enjoyed credit at the French banks? These are some of the things that one would wish to know. One must believe that the methods of this great fraud were very simple, and it may well be that most of Mme. Humbert's agents were never in her secret at all. It seems certain, for example, that most of the lawyers who conducted the Crawfords' various suits acted in good faith. How, said one of them pathetically, could one doubt the existence of clients from whom fees came constantly and generously? When Mme. Humbert is put upon the stand, we shall know more about these things, and this lends zest to the hope that this gifted woman may be spared the rigors of long and obscure exile from her beloved Paris. Since the Diamond Necklace there has been no more amazing swindle.

THE HOUSE OF THE DOUBLE AXE.

OXFORD, May 20, 1902.

Although the end of the present season will not entirely complete the explorations at Old Knossos, which will then have been carried on for three successive years, Mr. Arthur Evans writes in to-day's *Times*, under date from Candia of April 20, that there is "every hope that the main work may now be completed by the end of the present season." My immediate task is to summarize the discoveries of this year, which even now, with the results of a good month's work still to be heard from, yield in interest neither to last year's nor to the first year's discoveries. These last, as your readers are aware, consisted in a mass of inscribed tablets, processional frescoes, and miniature frescoes found (along with hoards of inscribed tablets, a large store of pottery, and details of exquisite ornamental stone-work) in a series of rooms which now prove to have formed the western wing of the great quadrangular palace. This wing was mainly "devoted to state and religious functions, business, and storage." Part of it contained the throne-room and other indications that here was the official habitat of the King, alongside of which were also what appear to be the women's apartments. That these were the residential quarters used by the ladies of the palace became still more clear in the course of last year's campaign, which accomplished the more thorough exploration of this western side of the quadrangle, cleared up the sort of back-door approach to the palace which constituted the northern side of the great parallelogram, and made many curious and startling finds on its southern side (the front). The most wonderful treasures here unearthed during the second year's excavations were remains of sculptures wrought in high relief, and exquisitely painted in one case, which were of such an unlooked-for quality that they might have come from some undreamt-of master of the Italian Renaissance—so instinct with life are they, and yet so strikingly without the characteristic serenity of Hellenic art. Last year also the discovery of the eastern side of the great quadrangle was begun. Here was found a vast hall, with double tiers of colonnades, approached from the higher level of the great central court, and of the three other sides of the parallelogram by a solidly built stone staircase leading down to it, with a triple flight of steps. Beyond this extended, on its lower level, a larger columnal hall, or Megaron. This "Hall of the Double Axes"—so called from the constant recurrence there of the symbol repeated everywhere on all sides of the great parallelogram—had at its eastern end a double portico, facing both south and east. The careful methods of excavation employed in exploring this hall and the adjacent "Hall of the Colonnades" showed that this part of the eastern side of the great parallelogram was a building of three stories. The topmost story was on a level with the rest of the palace, below which came an

intermediate story built over the two great halls above indicated, the level of whose floors was about twenty-five feet lower than that of the uppermost story and of the rest of the whole quadrangular building, which now proves to have covered fully five acres —not quite half the extent of the rambling palace at Fontainebleau, and nearly three-quarters of the area occupied by the Houses of Parliament, including Westminster Hall.

With this summary indication of the two first years' results, let me hurry on to the last thing unearthed by Mr. Arthur Evans just before he finished his report of April 30. This find was made in the course of explorations carried on not far to the north of the eastern end of the "Hall of the Double Axes," which occupies the eastern centre of the eastern side of our parallelogram. Here, on a higher level than the Hall, running north and south at the eastern extremity of the palace, is the upper "eastern terrace." In its basements and below the level of the later palace were found remains of a construction also on a royal scale, which was still earlier than our Minoan parallelogram. Here were found beautiful specimens of "Kamares" ware, with decorative paintings of notable artistic merit. Here also was found "a miniature vase of gold and porcelain, the thimble-like receptacle of which may have contained some perfume as precious as attar of roses." Lest we should deem that in this abysmally archaic period before the day of Minos the religion was not yet developed of which so many curious evidences have been accumulated in exploring the Minoan parallelogram, remains came to light showing a miniature pillar-shrine of painted terracotta with doves perched on its roof.

So much for the building which occupied this site before Minos and his "House of the Double Axe." In another basement, at a slightly higher level, and not far away, was found a curious record, wrought in a mosaic of small porcelain plaques, the deft handiwork and decorative beauty of which remind one of the wonderful draught-board discovered last year in one of the corridors east of the central court, and promptly copied by Mr. Beerbohm Tree, who utilized it for one of the presents proffered to Penelope by her suitors. In its original form the mosaic seems to have represented, says Mr. Evans,

"scenes disposed in various zones, recalling the subjects of Achilles's shield—the walls and houses of a city, a vine and other trees, warriors with bows, spears, and throwing-sticks, besiegers and defenders, and various animals. But the most surprising part of all is the houses of which the city is composed. Fragmentary as are their remains, it has been possible to reconstitute about a couple of scores of these. The varying character of the structure—stone, timber, and plastered rubble—is accurately reproduced, and the walls, towers, gateways (a whole street of a Minoan city) rises before us much as it originally stood. But, what is even more surprising than the fact that the elevations of these prehistoric structures should thus be recovered for us intact from the gulphs of time, is the altogether modern character of some of their features. Here are three stories (some of the semi-detached kind showing contiguous doorways), with windows of four panes, or double windows of three panes each, which seem to show that the inmates of the houses had actually some substitute for glass."

What else may by this time have been discovered in these palace basements we cannot know for a time, but this series of antediluvian genre pictures is in some ways the greatest of all the many surprises yielded by the Cretan Labyrinth.

After this we are tempted to make light of things which might otherwise have electrified us. The discovery, for instance, of a "fine painted frieze of spirals and rosettes," which was still partially clinging to the walls of a small bath-chamber, and of the remains of a painted terracotta bath, seems hardly worth recording; but our flagging attention revives a little at the mention of the wall-paintings under this frieze, which apparently served to decorate this bath-room and the portico beyond. "Quite an aquarium of fish, naturalistically rendered, including parts of two large dolphins and many smaller fry, several of them complete," adorned these walls. Mr. Evans makes the further observation that this fresco "supplies the counterpart to one of flying fish discovered by the British School in their excavation of the prehistoric settlement at Philokope on the island of Melos. In the Knossian fresco the blues are used mainly in depicting the fish, and therefore the sea is indicated by "azure wreaths and coils of dotted spray on a white ground." Again, we cannot, after all, be totally indifferent to an elegant lady in a yellow jacket and light tunic who is found on another fragmentary fresco just unearthed. "Her flying tresses and outstretched arm," says Mr. Evans, "suggest violent motion." Another fragment shows an almost nude female figure "in the act of springing from above and seizing the horns of a galloping bull." Precisely similar scenes were found by Mr. Evans last year. There was a "Mycenæan cow-boy" turning a somersault over the back of a charging bull, to whose horns in front clung "a girl in boy's costume," while another girl, performing behind with outstretched hands, seemed "to wait to catch her as she was tossed over the monster's back." That these acrobatic evolutions, like their lineal descendants, the bull-fights of modern Spain, were not unaccompanied with danger, is shown by another of last year's fragments, representing the fallen body of a man underneath a bull. The crude toreador fresco found by Dr. Schliemann at Tiryns takes its place along with these far more spirited depictions of the bull-fight, although it is a lamentable instance of decadence in an art which was not far from its zenith when the palace at Old Knossos was built and decorated.

Let us return now to the top of the staircase with triple flight leading down and eastward from the middle of the eastern side of the great central court or quadrangle into the "Hall of the Colonnades." On a lower level extends a corridor opened out last season. Below this, also extending eastward from a point contiguous to and north of the first downward flight of our stairway, another corresponding corridor has now been opened out. It was originally lighted from a window opening southward into the "light-well" of the "Hall of the Double Axes." Here Mr. Evans has made the largest find of inscribed tablets yet recorded—100 "perfect documents, dealing with palace accounts." His scrupulous study of the vast number of tablets found in previous years has stood him in good stead here; for he recognized the numerals at a glance, and has made out here again the prevalence of a consistent decimal system, and the fact that these tablets deal largely with percentages. Having found last year in the basements of the south side of the palace a counterfeit matrix of the royal signet ring, he has this year discovered, along with these tablets, several large clay impressions taken from the ring itself, "exhibiting a goddess and her attendants."

This newly discovered corridor or hall lying to the north of the "Hall of the Double Axes" not only is the means of approach to the preserved bath-room, but also (and here, as Mr. Evans intimates, Homeric students may well attend) there is a private staircase leading up by a double flight from the corridor on its northerly side, the side furthest removed from the "Hall of the Double Axes," from which it derived its light. This stairway gave access to upper rooms which are on the general level of the great central court and of the originally discovered buildings on its west side; but they are isolated, because a large room, to which apparently they have no means of access, intervenes between them and the great central court. Even more secluded were the rooms entered from a passage lying on the west side of this new corridor or hall. Here was a suite of rooms built on the level of the Halls of the Colonnades and of the Double Axes. This year, remains of an upper story have come to light.

Just in these secluded apartments much exploration is still going on, and has yet to be heard from. Already Mr. Evans has discovered there the remains of a wooden staircase, the upper part of which was literally "choked with broken seal impressions from what must certainly have been a secretary's office on the first floor." One of these impressions is unquestionably made "from a Babylonian cylinder," and bears startling witness, therefore, of the most direct kind to correspondence in Minoan days between Knossos and what we now are learning to call "the near East." As if to invite us to make certain that these secluded apartments of the palace were scrupulously made comfortable and salubrious for royal occupancy, the only unmistakable traces of a highly complex system of drains which the site has thus far yielded are found here. The point is so important that Mr. Evans's actual words must be given:

"The well-paved floors," he says, "are underlaid by quite a network of stone channels, in places crossing each other at different levels, and roomy enough to allow a man to crawl along them. A succession of stone shafts leads down to these from an upper story, in one case apparently connected with a latrine of which a curious and in some respects very modern example also occurs on the ground floor."

"In another part of the palace," reports Mr. Evans, without specifying where, "sections of a terracotta drain-pipe have been found of a most advanced form, with stop-ridges."

Finally, for even the discoveries made in the first two months of the third year's explorations must have their end, another group of smaller chambers was discovered, south of the block of halls, corridors, stairways, and apartments just described. Here were smaller rooms, occupied apparently by minor officials and servants. Excavations here, as in so many places explored during the first year's work on the western side

of the great parallelogram, have yielded hoards of inscribed tablets. One of these contains lists upon which Mr. Evans's practised eye discovered frequent repetitions of the "man sign," well known on tablets discovered in several parts of the palace. The other hoard shows frequent "outline figures of swords," and presumably refers to the armory. Furthermore, the pottery of this whole region of the palace has yielded new and unexpected illustrations of the prehistoric writing of Crete. There are graffiti, and on one Mycenæan sherd is a painted inscription suggestive of those on later Greek vases. Yet again, the inside of a cup found this year is covered over with a linear inscription of three lines written in ink, like those on the sherds found by Professor Flinders Petrie in Egypt. Vases decorated with lilies "in the earliest palace style" were found near the hoarded tablets. And last, but not least, there came to light a painted shrine. The capital importance of this in its bearing on the local cult requires the quotation of Mr. Evans's actual description of it, as follows:

"On a small dais, beside a tripod of offerings, and with a miniature votive double-axe of steatite before her, rose a painted terracotta figure of a goddess, pillar-shaped below, according to the old religious tradition, and with a dove on her head, while in front of her stood a male votary, holding out another dove. That a goddess was associated in the palace-cult of the double-axe further appears from a gem on which a female divinity is seen bearing this symbolic weapon in her hand."

That this hasty glance at two-thirds of this year's discoveries should occupy so much space, augurs well for the revelations to be looked for during the present month. In closing, let me venture to add that another year's work will probably be necessary at Knossos in order to make certain on the spot as to various details, and also to make provision against dangers of weather and the like in the case of those numerous and interesting features of the site which cannot find shelter in the old Venetian Arsenal, which has now become a museum. Of its collections, Professor Goodwin, who visited it at the end of April, writes me that it is "intensely interesting," and he adds:

"Before long this will be one of the great museums of the world, especially for prehistoric things. It is now stocked with the results of all the recent explorations in Crete. Of course, Evans's have the chief place; but the finds of Miss Boyd (our countrywoman) and of Halbherr, Bosanquet, and others are very conspicuous. Almost all the more perishable things, like the bright-colored frescoes from the walls of the palace, the vases, and the ornaments, have been brought in from Knossos to the museum, and they make a great show."

In view of the necessity for further expenditure next year and this—quite beyond the amounts raised by the Cretan exploration fund—it is to be hoped that those whom Mr. Evans's discoveries enlighten and delight may add to that fund in some substantial measure. LOUIS DYER.

JEROME BONAPARTE.

PARIS, May 23, 1902.

Among the numerous books which form the Napoleonic literature of the day, it is only just to cite a volume of M. André Martinet on 'Jerome Napoleon, King of Westphalia.' I will say at once that it cannot be compared to the works of M. Frédéric Masson or of M. Vandal. It is too much in the style of a panegyric, and is not sufficiently critical; but it contains many documents, taken from the national archives, the archives of the Ministry of Foreign Affairs and the War Ministry, and from the correspondence of Queen Caroline, the wife of King Jerome. Queen Caroline is well known to have been the most devoted of wives; she wrote to the King of Würtemberg, her father: "Forced by politics to marry the King, my husband, fate would have it that I found myself the happiest woman that could exist. I feel for my husband a union of love, tenderness, and esteem." History has not been quite as indulgent as this excellent person, and King Jerome has been rather severely judged before its tribunal. M. Martinet is not sufficiently impartial to reform its judgment. Jerome Bonaparte will still be considered the spoiled child of the Bonaparte family. He had all the graces and also all the defects of a spoiled child. Could much prudence and wisdom be expected from a young man who was called, before he was twenty-five years old, to the kingdom of a country of which the geography was hardly known to him?

On the 8th of July, 1807, Prince Jerome received from the Emperor Napoleon the following letter, written from Tilsit:

"MY BROTHER: I have just concluded peace with Russia and Prussia. You have been recognized as King of Westphalia. This kingdom comprises all the states enumerated in a note. I will let you know seasonably when I go to Dresden, so that you may be there at the same time. We will concert with regard to the organization of your kingdom. . . ."

Jerome Bonaparte was born at Ajaccio on the 15th of November, 1784. He remained with his mother in Corsica and at Marseilles, and arrived with her in Paris in November, 1797. He pursued his studies at the College of Juilly, and spent his holidays with his mother Letitia and his uncle Joseph. He was only fifteen years old when Bonaparte returned from Egypt, executed the *coup d'état* of the 18th Brumaire, and was made Consul. The boy left college to live in the Pavillon de Flore at the Tuileries, where he lodged near his illustrious brother, who had great affection and indulgence for him. Jerome amused him, distracted him from the cares of state, and was his favorite. At the age of sixteen, Bonaparte entered him as a mere private in the regiment of the Chasseurs of the Consular Guard, and his formal order was that Jerome should be treated like every other soldier. Jerome was, however, very averse to discipline, and, in order to break him, Bonaparte sent him to Brest, with the following letter for Admiral Ganteaume, who was preparing to go with a squadron to Egypt: "I send you, Citizen General, Citizen Jerome Bonaparte, to undergo his apprenticeship in the navy. You know that he needs to be made strictly to toe the mark and to make up for time lost. You will see that he fulfils exactly all the duties of the profession which he has adopted." To his young brother himself Napoleon writes a little later: "Mount the masts; study the various parts of the ship; let me learn that you are as agile as a good ship's-boy. Don't let anybody do your part. . . . Remember that the navy is to be your career."

On the 2d of November, 1802, Jerome was appointed lieutenant in the navy, and received command of the ship the *Epervier* under the orders of Villaret de Joyeuse. He wanted to distinguish himself by some bold feat of war, but the peace of Amiens was signed soon afterwards. From Saint-Pierre, in Martinique, we see him going to the United States, on an American ship. In that country he was obliged to remain for some time. It is well known that he was married on the 24th of December, 1803, to Miss Elisabeth Patterson. Jerome felt convinced that his family would soon feel the seductions of his young and charming wife. The news of his marriage reached Paris at the very time when Bonaparte assumed the imperial dignity; he was much incensed by the conduct of his young brother, and struck his name off the list of the new "princes" of the blood. We read in a letter of Talleyrand's: "M. Jerome Bonaparte, in contracting a marriage contrary to the laws of France, of which he is a citizen, could not hope that his marriage would be considered valid in France. His Majesty does not consider it as such, and does not recognize it." Such were the instructions given by Talleyrand, by order of Napoleon, to the diplomatic agents of France.

In the year 1805 Jerome tried to obtain pardon in person, and embarked at Baltimore for Lisbon. The Consul-General of France in Portugal consented to give him a passport, but refused to add to it the name of his wife. She was obliged to leave for England, while Jerome set off alone for Italy, in order to meet his brother. Napoleon had been crowned King of Italy at Milan, on the 26th of May. He left afterwards for Alessandria, to be present at a great celebration of the anniversary of the battle of Marengo. The moment was favorable to a reconciliation of the two brothers. The Emperor pardoned Jerome, but on conditions which Jerome accepted with a levity that differed much from the determination which Lucien had shown in somewhat similar circumstances. He bowed before the iron will of the Emperor and joined the French fleet at Genoa, with the mission of going to Algiers to claim from the Dey the immediate deliverance of some French and Italian slaves. He accomplished his mission successfully, and brought back from Algiers about two hundred and fifty Europeans. At the close of 1805 he went to Brest and was appointed second in command in the squadron of Admiral Willaumez. He captured some English vessels, and, being pursued by four English ships of war, succeeded in entering the dangerous bay of Concarneau.

On his return to Paris, he was appointed Rear-Admiral, and received the grand cordon of the Legion of Honor. A senatus-consultum of September 24, 1806, decreed that, failing any male issue of his Majesty the Emperor Napoleon, Joseph, King of Naples, and Louis Bonaparte, King of Holland, should be heirs to the crown, and that "the imperial dignity should devolve on Prince Jerome Bonaparte and his descendants, by order of primogeniture." It entered into the plans of Napoleon to create close ties between France and the German confederacy, and to marry princes of his family with German princesses. Eugene Beauharnais married the daughter of the

King of Bavaria; Josephine's niece, Stéphanie, became the wife of the hereditary Prince of Baden. Napoleon resolved to marry Jerome to the Princess Catherine of Würtemberg; but he was still very young, and, before becoming the husband of the Princess, he was put at the head of the divisions of Bavaria and Würtemberg, from November, 1806, to July, 1807. He conducted the operations of some sieges during the campaign in Prussia before the armistice at Tilsit. The marriage took place soon after the conclusion of the peace on the 28th of August, in the chapel of the Tuileries.

M. Martinet gives us the text of the letters addressed to her family by the young Princess, accustomed to the quiet existence of the Court of Stuttgart, and now surrounded by the magnificence of the Imperial Court of France. She was impatient to leave Paris for Westphalia, as Jerome had been made King of Westphalia. A Constitution had been rapidly drawn up for the new kingdom, divided, after the fashion of France, into eight departments. On the 22d of November, 1807, the King and Queen left Paris. Their capital was Cassel. The royal residence was barely furnished. "I have," she wrote to her parents, "to send to Frankfort or Paris for everything. I cannot even find here a bit of ribbon, and when I ask why, they tell me that the late Elector could not bear any sort of luxury." The Treasury was empty, and there was a deficit of nine millions; pensions and salaries could not be paid; the cities had all been ruined by the incessant passage of troops.

M. Martinet's volume has many interesting details on the short-lived kingdom of Westphalia, on the efforts made by King Jerome to improve Cassel, and to make it a capital, on his lavish expenditure, on the administration of the kingdom, on Jerome's financial difficulties, which became so great that at times he threatened to resign. Napoleon had attached to him Reinhard, who had been for a short time Minister of Foreign Affairs under the Directory, and who belonged to the diplomatic service of France, though he was a Würtemberger. Reinhard carefully informed Napoleon of all Jerome's doings.

The account of the various conspiracies and revolts which took place in Westphalia is perhaps the newest part of M. Martinet's volume. Everything was still uncertain in Germany. Napoleon made exchanges of territory in the Confederacy; he annexed Hanover to Westphalia, and thus for a time increased the kingdom of Jerome. Some time afterwards, the Emperor took Hanover back. He thoroughly justified the lines of a famous song of Béranger:

> "Un conquérant dans sa fortune altière,
> Se fait un jeu des peuples et des rois."

The latter part of the volume shows us Jerome's star in its decline; the kingdom of Westphalia disappeared in the great catastrophe which filled the last years of the Empire. The tide of the invasion of France swept it away. Jerome had to take his place near his brother, and did his part bravely at Waterloo; he concealed himself for some time afterwards, and Fouché, who remained secretly attached to him, favored his flight from France. He found an asylum at Göppingen, with his wife Catherine, who remained faithful to him to the end.

Correspondence.

THE ODE TO DUTY.

To the Editor of The Nation:

Sir: In Mr. A. T. Quiller-Couch's 'Oxford Book of English Verse,' on pages 606-7, occurs the following stanza, inserted in the third from the last place in Wordsworth's "Ode to Duty":

> "Yet not the less would I throughout
> Still act according to the voice
> Of my own wish; and feel past doubt
> That my submissiveness was choice:
> Not seeking in the school of pride
> For 'precepts over dignified,'
> Denial and restraint I prize
> No farther than they breed a second Will more wise."

I have never seen these lines before, and cannot find any allusion to them in the notes of Dowden or Knight. They seem to me, moreover, entirely unworthy of a place in so noble a poem, containing as they do nothing but a feeble and prosaic attempt at a logical justification of its central thought. Assuming that Wordsworth wrote such verses, it is natural to conjecture that he afterwards expunged them, with more discretion than he sometimes displayed in the revision of his works.

Perhaps some Wordsworthian, perhaps Mr. Quiller-Couch himself, will inform us as to this stanza's history.

Sincerely yours, H. J. Edmiston.

Bryn Mawr, Pa., May 21, 1902.

Notes.

'Cromwell's Army,' by C. H. Firth, is to be published in America by James Pott & Co.

W. R. Vansant & Co., Chicago, announce for immediate publication 'Martinique and the World's Great Disasters,' by Trumbull White.

In course of issuance by the Abbey Press are 'Surgery: Its Principles and Applications,' by Hamilton Fish, M.D., and 'Ruskin's Mornings in Florence,' by Margaret Baker, with seventy-four illustrations.

Mr. Sidney S. Rider has in preparation a book in illustration of a map of Rhode Island with the territory named as known to Canonicus and Miantinomi—phonetically, not orthographically. Mr. Rider exhibits forty-two different spellings from the Early Records of the designation of the first purchase (now Providence), and a forty-third form written thus in the original deed by Roger Williams—"Notaquonckanet."

Lemcke & Buechner, 812 Broadway, solicit subscriptions for a facsimile reproduction of the illuminated copy of the *Sachsenspiegel* preserved in the Royal Library at Dresden, and dating back (for its contents) to 1250, when Eike von Repgow brought together the chief elements of the ancient German law in force during the reign of the Suabian dynasty. For its illustrations the Dresden is the best of four, and graphically exhibits the history of mediæval law and art, costumes and arms, economics, and Saxon civilization generally. The facsimile will consist of 184 phototypic plates, in two portfolios. Publication, already begun by Karl W. Hiersemann in Leipzig, will be concluded in October next.

The Dent-Macmillan 'Dramatic and Early Poems by Matthew Arnold,' succeeding in the Temple Classics the 'Poems Narrative, Elegiac and Lyric,' is much the same disservice as if Arnold's own 'Selections from Wordsworth' had been followed up with the rejected matter. Here, for instance, is the *succès d'estime*, "Merope," the impossible "Empedocles," the Rugby and the Oxford prize poems, with other pieces suppressed by the author's better judgment; here are the Sonnets, which furnish many a line of familiar quotation, yet no one of which structurally would demand a place beside the best in the language. And still, to know Arnold as a poet we must have these examples no less than those in the companion volume. Then, his apology for the "Merope" is worth reading and re-reading. Mr. Buxton-Forman amply supplies the bibliographical apparatus. The proof-reading, which was notably careless in 'Poems Narrative,' seems here better; but lines 144-146 of "Merope" suffer a sad change from mispointing.

When Judge Charles C. Nott put forth 'The Seven Great Hymns of the Church,' many years ago, he withheld his name, not desiring "to assume a scholarship which [he] did not possess." A revised and enlarged edition (E. S. Gorham) has the "Dies Iræ" as its backlog, and offers no less than seven versions of it. This is well enough if the poem be taken historically, and not recommended as suitable for public or private devotion in our time. The "Stabat Mater" and the "Vexilla Regis" also, in less degree, belong to the past. The others retain more life, *i. e.*, are better suited to modern use. The books which the editor relies on, though among the best of their kind, are all old—Neale's 'Mediæval Hymns' and 'Rhythm of Bernard,' Mrs. Charles's 'Voice of Christian Life in Song,' Mr. Benedict's 'Hymn of Hildebert,' and Dr. Schaff's 'Christ in Song.' He ought, at least, to have dipped into a few still older volumes, especially 'Lyra Catholica.' Edward Caswall, though no great poet, did some creditable and useful work. Not all the versions here given are of marked merit. Miss Winkworth's is not the best rendering of "Veni Sancte Spiritus." The compiler's comments are less illumining than those quoted from Dr. Neale; but he is not far wrong in putting "The Celestial Country" in the front of his little book, and calling it "the sweetest and dearest religious poem that our language contains." In this, Neale surpassed his own other translations from the Latin as much as he excels other men's lumbering and heavy renderings of the "Dies Iræ."

Mr. E. Marston, who is beguiling his old age with a modest form of professional biography, supplements his book of a year ago by 'Sketches of Some Booksellers of the Time of Dr. Samuel Johnson' (London: Sampson Low, Marston & Co.; New York: Scribners). The notices, which appeal chiefly to literary antiquarians and to the trade, deal with Dodsley, the Lintots, Cave, Bowyer, T. Davies, T. Evans, and a few others. Dr. Johnson's father, Michael (1656-1731), is the earliest, and John Nichols (1744-1826) the latest. There are seven portraits.

The difficult profession of philanthropy has been expounded by Miss Jane Addams

in a course of lectures delivered at various places, and published in some of the periodicals. These lectures are now made into a book entitled 'Democracy and Social Ethics' (Macmillan Co.). There is much that is suggestive and interesting in the tales concerning the recipients of philanthropic attentions, especially in the account of the relations of a Chicago Alderman with his constituents. The attempt to discuss the situation philosophically does not seem to us so fortunate in its event. The course of political thought in the past is not referred to, and the obscurity of the style appears to be due to lack of clearness in the thought. But the lesson that the standards of morality are very different for different ranks and for different individuals is well enforced, and no lesson is more important for all who undertake the care of the morals of others.

Such a leviathan as the United States Steel Corporation well deserves a monograph, and Prof. Horace L. Wilgus of the University of Michigan has undertaken the task. His treatise, published by Callaghan & Co., Chicago, under the above title, consists of three lectures and many tables and documents. The agreements, circulars, charters, etc., fill seventy-five octavo pages. The lectures contain a good deal of biographical matter, which, although somewhat in the nature of gossip, has historical interest and value. They also contain many particulars concerning the methods in which the business of the corporation is carried on. We do not observe that any legal considerations of novelty are presented. Professor Wilgus thinks that the State and general governments should require the publication of full accounts. He regards the anti-monopoly laws already enacted as sufficient to provide such regulation as the interests of the public demand. The book is liberally indexed, and will be found convenient for reference.

The Bibliographical Society of Chicago has republished, in a very limited edition, a monograph by Augustus de Morgan 'On the Difficulty of Correct Description of Books.' The numerous instances cited of blunders in catalogues and bibliographies, and the causes which give rise to such blunders, especially in the case of old books, are very curious. It is somewhat odd that a pamphlet of thirty-three pages only, on such a subject, and issued under such auspices, has apparently gone from the imposing-stone to the press without intermediate proof-reading, which could hardly have failed to detect several glaring errors, and especially one on p. 21, where the misplacement of a line throws a whole paragraph into confusion. (We had written this before we received from the Society a corrected leaf to replace pages 21, 22.)

Under the title 'Some Unpublished Letters of Horace Walpole' (Longmans), Sir Spencer Walpole has made public some thirty letters of considerable interest. They are addressed to the writer's cousin, Thomas Walpole, and to his son, and extend over twenty-six years from 1766 to 1792. These letters are almost entirely personal in character, very little notice being taken of the public events of those momentous years. The aged and blind Marquise du Deffand, for whom Walpole cherished the most tender friendship, died in 1780, and much of the correspondence relates to her, the grief that he felt at her loss, and the trouble he had in securing her papers, which she had bequeathed to him. The popular idea that Walpole was a mere fribble and dilettante, who cared for nothing seriously and for nobody but himself, should be modified by the perusal of these letters. The volume contains a portrait of Walpole and one of Mme. du Deffand.

We printed last week an item from Dr. Stiles's Diary undermining the legend of "Brother Jonathan" as an expression derived from Washington out of affection for Gov. Trumbull of Connecticut. The legend is effectually riddled in an exhaustive inquiry contributed to volume vii. of the Publications of the Colonial Society of Massachusetts, by Mr. Albert Matthews. It appears that "Jonathans" were, first, the disaffected colonists as viewed and derisively denominated by the Loyalists. Mr. Matthews's earliest quotation is of 1778, and postdates Dr. Stiles's, which, moreover, starts full-fledged as "Brother Jonathan," and in Boston, after Bunker's Hill. If the term was originally meant to be synonymous with Yankee and New Englander, it soon took on a wider significance. There were South Carolina Jonathans. Mr. Matthews's article is curious reading for much else besides his main theme; indeed, his excursions are so numerous and copious that sometimes we cannot see the wood for the trees.

Mr. Matthews also reprints from the *Monthly Weather Review* for January and February last an equally laborious examination of the history of our American expression "Indian summer," for which his first quotation is from Major Denny, in 1794, this officer having been a native of Carlisle, Pa. Once more we are impressed with our searcher's prodigious industry, and once more (in view of what on page 50 he calls "odds and ends") with the great desirability of an index to such comprehensive studies.

Romesh Dutt is well known, not only as an Indian politician, but as a scholar, and the author of condensed editions in English verse of the Mahabharata and Ramayana. Nearly twenty years ago a novel of his in an Indian vernacular, published at Calcutta, met with considerable success among his countrymen. He has now translated it into English under the title of 'The Lake of Palms' (London: Fisher Unwin). It is an interesting story of modern Indian domestic life, which may enable us better to understand Indian ways of thought and bring us in sympathy with the people. Politics and the different standpoints from which life is regarded in the East and in the West are not unduly obtruded. Old and new ways jostle each other—pilgrims crowd to holy Hindu shrines by rail. In the East as in the West it is being found out that to continue orthodox it is not necessary always to place old interpretations upon Scriptures. We realize that devotion and sweetness of life flourish under the Hindu as under the Christian scheme of life. The tenderness, purity of thought, and deep religious feeling that undoubtedly characterize masses of the Indian people, are here brought home to us.

We had occasion to mention, in these columns, some years ago, a paper read before the Academy of Sciences in Christiania, by Prof. S. Bugge, relating to a lost runic inscription, of which there now is merely a paper copy extant, taken early in the last century, and in which Bugge had found a verse containing reference to an expedition to Vinland. Since that time energetic search has been made in the district of Ringerike, on the farm where the stone originally belonged, to find it again, but in vain. Professor Bugge has now published his interpretation of this inscription as a part of his serial publication of Norwegian runic inscriptions. It is of interest not only as the only contemporary record of the Vinland voyages—the Icelandic sagas being about 300 years younger than the occurrences chronicled—but also because it must refer to an expedition of which there is no record left in the Sagas, showing that the intercourse was more active than would appear from the written sources of information.

The principal article in the *National Geographic Magazine* for May is an account by Mr. W. D. Wilcox of an expedition through the unexplored region in the Canadian Rockies lying between the railroad and the United States boundary. This comparatively unknown territory, "which is a blank on Dawson's map," has an area of more than 2,000 square miles, and contains the sources of numerous tributaries of the Elk and Kootenai Rivers. Some reproductions of photographs of characteristic scenes show a rare and beautiful combination of snowclad mountains, glaciers, lakes, forests, and charming meadows crowded with wild flowers.

In the *Geographical Journal* for May the Rev. Thomas Lewis describes the ancient kingdom of Kongo, now forming a part of the province of Angola, and its present condition. Its history for the last four centuries is simply one of Portuguese misrule and neglect. A flourishing state whose people had attained a relatively high degree of civilization has become an unknown wilderness inhabited by savages. The capital, San Salvador, once a well-built city of over 100,000 inhabitants, has now barely 1,500. The chief vestiges, apparently, of the Portuguese occupation are the titles Don and Dona given by the natives to their children, and the prevalence of the crucifix among the fetishes of the priests. In Zombo the crucifix is a symbol of power passed down from one chief to his successor. Notwithstanding the negro's present degradation, Mr. Lewis firmly believes in his mental capacity. The mind of the savage is not a blank. "After most careful observations, extending over nineteen years, I have come to the conclusion that there is nothing in the customs and fetishes of the African which does not represent a definite course of reasoning." But his ambition must be aroused. "Not until the *man* in him is found and recognized can there be any real progress made in the development of Africa."

The aim of the Children's National Guild of Courtesy, founded in England ten years ago, is to promote among boys and girls "kindly and thoughtful consideration for others." As members' rules, simple directions for conduct are given under the separate heads of "courtesy as regards yourself," at home, at school, at play, at table, in the street. These begin with "Be honest, truthful and pure," and end with "Be tidy." There were at the close of last year 499 branches in as many different towns in the United Kingdom and the Colonies, with a membership roll of 31,887. In the annual re-

port, strong testimony is borne by teachers to the success of the Guild, to "a manifest improvement in the behavior of our boys and girls." One of the three "bravest and greatest men who ever lived" commended to English children because of his courtesy to others is George Washington.

The Bodleian Library is to celebrate its tercentenary in October next. The collection founded by Duke Humfrey of Gloucester about 1450 had been allowed to suffer dispersal in the course of a century. Sir Thomas Bodley at his own expense refitted and replenished the bare walls, and threw the library open to the public on November 8, 1602. The celebration will last two days, concluding with a dinner on October 9.

—The neglect of the outer covering of the Harvard College Library is notorious, and (amid the incessant flow of benefactions) both curious and hard to explain. The one occasion on which we have heard it the subject of remark at a commencement dinner was when Mr. Choate, fresh from his triumph over our law-givers in the argument concerning the income tax, proposed that every one of his hearers should contribute to the Library building the sum thus saved to him. Mr. Choate's reputation as a jester was too well fixed to make this suggestion redound to the advantage of the Library a single penny. Meanwhile, the crying need for greater present room, for a construction also for the future, has become more crying, and at the approaching commencement dinner something might well be said on the report of a committee submitted March 31, 1902, which is obtainable in pamphlet form. The present miserably overcrowded building is shown to have but half the capacity of Columbia's great edifice, the princely gift of President Low, and but little more than a third of Princeton's. The decision against further tinkering of the Gore Hall structure is unimpeachable. A wholly new design being assumed, the committee in some detail work out the size and functions, and conclude that "a plain brick building fireproof construction can be erected for twenty-five cents per cubic foot," with a total cost of $750,000 to $800,000. But the administration of the enlarged library will involve increased expenditure, calling for an additional fund of half a million, or a million "to make the Library independent of the College, and enable it to carry on its work easily and effectively." A word to the rich is sufficient. Four men (or women) giving half a million each would meet the need. Incidentally, the report contains a very interesting discussion of the question lately raised anew of separating "live" from "dead" books.

—Houghton, Mifflin & Co. have published, in attractive book form, the address of Representative S. W. McCall before Dartmouth College, of which he is an alumnus, on the one-hundredth anniversary of Daniel Webster's graduation. The address is printed with some slight revision of its form as prepared, and without the abridgment made necessary by the conditions of its public delivery. The occasion required more of a eulogy than was consistent with entire critical sincerity, and Mr. McCall met the requirement with an apology that falls little short of being a panegyric. Little is made of Webster's college life, the tradition of it is so parsimonious. The lawyer is considered first, and then the orator and statesman. By a happy circumstance, Webster's plea for Dartmouth before the national Supreme Court gave him assured standing in that court. For his great jury case, the White murder trial is selected in accordance with a very general legal opinion of its preëminent character. It is interesting to find George Ticknor fearing an apoplexy from his emotion excited by Webster's Plymouth oration, while Mr. McCall demurs at its florid and ineffectual imitation of Burke. Deservedly much attention is paid to the reply to Hayne, the spoken peroration of which is given and preferred to that commonly known, which is more artificial. There is a discussion of the relative merits of Webster's oratory which arrives at the conclusion that he was surpassed by no English-speaking orator and equalled only by Burke. The apology for Webster's support of the "tariff of abominations," in direct reversal of his position four years earlier, is that the tariff had in the meantime created New England manufactures and given him a bill of divorcement from his former principles. Even more lame is the apology for the Seventh of March speech. It may be conceded that Webster's love of the Union was genuine, and also his fear for its safety. But there is no proper apprehension of Webster's declension from his earlier anti-slavery position, and Mr. McCall simply puts Webster's desire for the Presidency out of court. Allusion is made to the "noble reparation" of Whittier's "Lost Opportunity" for the "Ichabod"; but the later poem retracts little or nothing. It simply regrets that Webster did not live to see his Union-saving doctrine come into general fashion. The wonderful picture of Webster in the tall stove-pipe hat is the effective frontispiece to the little volume.

—Henry Loomis Nelson opens the June *Century* with a discussion of law-making at Washington by the hierarchy of the three majority members of the Committee on Rules. We get a vivid presentation of actual conditions, but Mr. Nelson hardly makes out a good case for his proposal to seek reform further along the same road that has led the House into its present condition. A recognized committee in each branch, composed exclusively of members of the majority party, for the express purpose of selecting both the subjects to be presented to Congress and the form in which they shall be presented, is his prescription. This, he thinks, will make it possible for the country to know, as it does not now know, where rests the responsibility for failure or the credit for achievement. But how are the voters at large to enforce responsibility against such a party committee? About one voter in a hundred would have an opportunity to strike at some member of the committee at the polls. Other members of the majority party, in case the committee should become offensive, would save themselves with their several constituencies by the entirely plausible plea that the action of the committee was against their judgment. Mr. Nelson makes the common assumption that the House, previous to the Reed rules, had become an inefficient mob, and that the new system has transformed it into something better. The proportion of fiction to demonstrable fact in the latter half of this assumption is unduly large. Professor Pickering contributes an interesting bit of comparative astronomy, arguing from the similarity of the "canals" on Mars and the moon, and the known scarcity of air and water-vapor on the latter, against the supposition that the "canals" on Mars are the product of living beings. No astronomer, he thinks, will be tempted to reverse the argument and use it in support of the inhabitation of the moon.

—*Harper's*, like the *Century*, draws upon the Harvard Observatory for its June issue. Ralph Bergengren, working upon material furnished by Professor Pickering, describes some of the discoveries read by astronomers from the autobiographies which the stars are made to write upon the plates of the photographer. Harvard has already more than 115,000 of these plates filed away, and instruments both at Cambridge and at Arequipa are constantly increasing the collection. An incident or two will show the value of this collection for future study. When Mme. Ceraski of Moscow discovered an Algol variable, in 1898, a reference to the Harvard plates disclosed more than two hundred photographs of this star, taken between 1890 and the date when the plates were examined. Again, the negatives proved that Nova Aurigæ, discovered by Dr. Anderson of Edinburgh in 1892, had been visible at least six weeks before it was actually seen. Of the eight most important new stars among the discoveries of the past decade, six were first noticed by Mrs. Fleming, the curator of the collection, in the routine examination preparatory to filing and cataloguing. Dr. Henry C. McCook makes a contribution in popular science in a very different direction, through a study of the relation of insect life to the progress of human civilization. Even the coal measures which have been so important a factor in the industrial life of recent generations, we owe to insect life, in so far as the conifers of the coal-forming era were dependent upon insects for fertilization. Darwin has shown the function of the earthworm in the preparation of soil for agricultural processes, and the writer concludes, from his own observations, that the part played by ants in the same work is, within their sphere, almost as great. On the other side of the account, the destructive work of insects in this country has been estimated by various authorities at from three to four hundred millions of dollars per annum. Mr. Howells, from the Easy Chair, gives a pleasant account of his trip down the Ohio, fifteen months ago. Readers acquainted with the ground will find his treatment of the "shanty-boat" population defective in its failure to recognize the relation of these people to the illicit liquor traffic, growing out of the ease with which the floating "speak-easy" crosses the line of State jurisdiction along the Ohio River.

—Money, world-politics, and golf—these are the three subjects upon which Americans now care to talk, according to William Garrott Brown in the current *Atlantic*. The editor has recognized all three. Charles M. Skinner's paper on the Electric Car talks in billions of American investments in trolley railways, though the financial aspect is only one feature of his study. More interesting to those who care to go beyond Mr. Brown's trinity of current conversation is the question of the sociological effect of the trolley, now that it has ceased to con-

fine itself to the city and is mingling country, village, and city population as they have never before been brought together in the world's history. As to world-politics, we wearily learn from the paper of Remsen Whitehouse, on "Austria and Pan-Germanism," that another great field for American "influence," armed if necessary, is looming up. If "militant Pan-Germanism" shall go to the extent of incorporating Austria, as its scheme demands, then there is a call for the active intervention of the world Powers, "among which the United States has assumed so important a place, and corresponding responsibilities." Mr. Brown's readable apology for golf, as a recreation fitted to take a man's brain out of the modern whirl, and teach him some of the quiet habits of mother Nature, is at once witty and convincing. Even those of us who lack courage to take up a game which requires a new language in addition to the three or four of the college course, can yet bless the golf club for drawing off competition, and leaving us so much more nearly alone with the trees, the stream, the trout, and the bamboo. Prof. Irving Babbitt considers the present position of "the Humanities" in a paper which should have the earnest attention of educators, classical or otherwise. He sounds again the needed warning against the ruin of classical studies by losing sight of their true function, and importing into them on false analogy "scientific methods" which belong in other spheres.

—W. S. Harwood gives a glowing account in *Scribner's* of "The New Agriculture," meaning thereby the improvement which has resulted from the work of the various agricultural experiment stations established under the acts of 1887 and 1890. It is unquestionable that these stations have done a large amount of careful and valuable scientific work in the short period of their existence, but a little open-eyed travel over the country, combined with a careful study of crop statistics, must convince even the enthusiast that the new agriculture is as yet pretty closely confined to the experiment stations themselves and the files of their published bulletins. Not until a more vital relation is established between this work and the average farmer will it be true to say, as Mr. Harwood says, that "the progress in agriculture in the last generation has been greater than in all the generations that have preceded." Harvey Maitland Watts attacks in a determined way the theories of the Gulf Stream as a climatic factor which have had such vogue ever since the publication of Lieut. Maury's famous 'Physical Geography of the Sea.' Within a year of the appearance of Maury's book, William Ferrel contributed to the Nashville *Journal of Medicine* a paper which marked out the way for the views now held by scientific observers, assigning to the Gulf Stream a very low position, as compared with the cyclonic and anti-cyclonic movements of the atmosphere; but Maury was read with delight by the masses, while the more scientific views were unknown except to the scientific few. Perhaps there is a lesson in all this for those who look askance at any literary quality in the scientist. Maury was read because he aimed to be readable, and succeeded. Editorially, we have some remarks on Russian literature, to the effect that the Russian writer, if he be a man of any power, sees no use in writing at all "unless you write with the intention of getting as nearly as may be at the secret of why one happens to be alive."

—The interesting story of King Horn has of late been the subject of much careful study. The Middle English poem appeared last year in two new editions, one by Professor McKnight of Ohio State University, and the other by Mr. Joseph Hall of the Hulme Grammar School, Manchester. At the December meeting of the Modern Language Association two papers were devoted to the Horn story. We now have the elaborate study of a young German scholar, a part of which appeared last year as a Kiel dissertation ('Studien zur Hornsage,' by Otto Hartenstein, in the *Kieler Studien zur englischen Philologie*, part iv.). Its chief value lies in its full digest of the history of opinions regarding Horn problems. As an original contribution to the subject it will not rank high. The points which chiefly interest Hartenstein are the authorship of the French version, and the original home of the legend. He concludes that Mestre Thomas was a wandering singer, no longer young, who had been well educated in a cloister; whose home was in southern England, perhaps in Sussex, where he possibly became a man of family; and who, while speaking Anglo-Norman French, was acquainted with English. The legend is Germanic; that it originated in England this scholar thinks is shown chiefly by the names, only two of which, *Aaluf* and *Thurston*, are surely Norse. The identification of *Horn* with *Orm*, which seems to come from Professor Gering, is doubtful, and, as Hartenstein adds, unnecessary. Like many other critics, however, Hartenstein fails to take sufficient account of the Celtic character of localities and surroundings, and it seems probable that Dr. Schofield's theory, which locates Horn's home in the Isle of Man, will ultimately find general favor. A valuable feature of the book is the bibliography. The compiler, however, seems not to have known of McKnight's excellent reëdition of Lumby, although it appeared some weeks in advance of Hall's, which he notes in his *Nachträge*.

WALTER BESANT.

Autobiography of Sir Walter Besant. With a Prefatory Note by S. Squire Sprigge. Dodd, Mead & Co. 1902.

Sir Walter begins his autobiography with an elaborate conceit of his original choice of the place and time and circumstances of his birth, of the family he would be born into, and the training he would get therein. He imagines himself as having chosen exactly those things which were actually his portion. But, had his prevision extended to the publication of this book, it is extremely doubtful whether he would have chosen Mr. Sprigge as its editor. It is quite certain that he would not have done so, for Mr. Sprigge's "Prefatory Note," twenty pages long, is to a considerable degree an apology and a depreciation. It tends to beget in the reader's mind a suspicion of the quality of Sir Walter's account of his own life. Some of the particulars are well enough. Besant's habitual method was to make a rough manuscript first, revise that to some extent, then have a typewritten copy made, and revise that carefully. The manuscript of the Autobiography never got so far as the typewritten stage. The earlier chapters were, however, fully and freely revised; the later ones were not, and there were gaps in them which Sir Walter would have filled up—one of them very notable. Much of this the reader would have surmised without editorial help. The points at which the editor has overstepped the bounds of prudence are those relating to Sir Walter's opinions of the critics and the theologians. We see no reason for supposing that Sir Walter said anything of either of these sets of people which did not fairly express his thought and feeling, and, could he revisit the earthly scene in which he took a strong man's pure delight, Mr. Sprigge would quite possibly have a bad quarter of an hour. We are assured that Sir Walter's hatred of the evangelical theology was "an expression of his delight in life, and had nothing to do with his sacred convictions." But he had no more sacred conviction than that life was a good thing and meant to be enjoyed. Mr. Sprigge is confident that the "bitter acerbity" which distinguishes his remarks on ritualism would have been sweetened if he had been spared to think over the passage. They might have taken on a keener edge. Mr. Sprigge also deprecates the acerbity with which the critics are treated; but Sir Walter knew well enough that there are critics and critics, and he does not fail to discriminate between the better and the worse.

There is little intimacy in Sir Walter's disclosure of the facts of his career. He keeps pretty steadily in mind his purpose to set forth his literary life, and he neglects the more personal part except as this interprets or illustrates his literary ambitions and successes. He is at his best in his account of his early years, at Portsea, near Portsmouth, where he was born August 14, 1836. Much of the local situation passed into his novels, and from these a number of long extracts are made which are less effective than the direct reminiscence. The father, who was "not a pushing man and mostly waited," was a book-lover, and liked plays particularly. He had a large collection which he got rid of when he thought they would harm his boys; not, however, until after Walter had read all of them. Sir Walter's hatred of Calvinism was the fruit of which his father's indifference to it was the flower. Regular in his attendance at church, the father never presented himself at Holy Communion. "Since we were warned how we might, by unworthily partaking, cause our own damnation, it was generally felt that it was wiser not to take the risk." The boy enjoyed the long sermons very much. They left him to his waking dreams. So long as he lived, he was never able to listen to a sermon. "The preachers begin," he says; "I try to give them a chance. Then the old habit returns. Involuntarily my eyes drop, I fly away, I am again John-o'dreams." This is very pretty, but it is quite spoiled by the confession that he went to church but once or twice in thirty years. Was that his idea of giving the preachers a good chance?

His mother was the cleverest woman he ever knew, the quickest-witted. Such imagination as he had he credited to her. A rare passage in the book is that which describes himself sitting at her feet in the deepening twilight, looking into the red

coals and listening to her stories of the New Forest. He writes of his senses as being imperfect. He was short-sighted, he says, and slow-sighted, and, likewise, dull of smell. This is strange for the eulogist of Richard Jefferies. But there was some alleviation.

"I have a companion (who has tried to teach me all she knows) who finds, I am aware, a thousand breaths of fragrance where I find only one. She hears in the warbling of the woods a hundred notes, and distinguishes them all—to me they are mostly like; she knows all the trees, with the infinite varieties of leaf, of color, of bough and branch, with the loveliness and the charm that belong to each—I take them all together; she knows all the wild flowers and loves them every one for its own sake and for its own special charm—I love them all together. This comes of a childhood spent in streets and on the seashore, and of a boyhood wherein the leisure hours were chiefly passed up in a corner, nose in book."

The story of Besant's early schooling and later education abounds in interesting matter. His first school was kept by three sisters, two of them "serious," the third never serious; and her cheerfulness gave the school its characteristic note. It was at this early stage that he began his independent reading with 'Pilgrim's Progress,' 'Robinson Crusoe,' and the Apocalypse. His best schooling was the next in order. Thanks to it he knew more Greek and Latin at the age of twelve than when he went up to Cambridge at eighteen. But though he could "rattle off miles of Homer and Virgil," he could never say his catechism straight. He always broke down at the question, "What desirest thou in the Lord's Prayer?" "There I met my fate; the cane was at hand—whack! whack!" Other private schools followed, and then, with a view to his taking holy orders, which was not dissipated till he was twenty-four, Besant entered a London grammar school which had a subordinate relation to King's College. Better than the games, at which the school was not great, he liked to get away to the City of London, which was then to him, as ever after, a place of mystery, full of things to be discovered. He then and there began London archæologist. In 1854 he left the suburban school with the honors of its captaincy and a barrowful of prizes, and entered King's College, after signing, as required, the Thirty-nine Articles, four of which he learned in the course of his first year, and "the remaining thirty-five I continued to accept on trust." The period at King's was the most dreary part of his whole life.

"We were," he says, "left absolutely alone. . . . No one appeared to know how desperately miserable an evening in lodgings may be. . . . When my nerves could stand it no longer, I have taken my hat and rushed out into the streets. . . . I wonder that some horrible obsession of the devil did not fall upon me as it fell upon hundreds and thousands like myself, turned into the streets because I could not bear to sit alone."

Yet the college which drove a boy into the primrose path of dalliance, after this fashion, was "then, even more than now, a bulwark of orthodoxy and the Established Church." He took a mathematical scholarship and carried off prizes in classics, mathematics, and divinity, ironical as that may seem. "But nobody cared about any of the students; during the whole time I was there, I never remember a single word of personal interest or of encouragement." From the hard actual he took refuge in the ideal, and resolved to be a poet. The poems were put away, neatly labelled. Long afterward he looked them over. "Heavens! How could any one, even at the present day, imagine that such stuff was poetry!" But what with their royal borrowing and earnest aspiration, he recognized that the writing of that stuff was part of his education.

The account of Christ's College, Cambridge, whither, in 1855, he betook himself from King's, and of the University in general, is very interesting, but not more flattering than Gibbon's picture of the Oxford of his time. "The dulness, the incapacity, the stupidity of the dons brought the small colleges into a certain contempt. Naturally the dulness of the fellows was in some sort reflected among the undergraduates. There were certain colleges which never seemed to show any intellectual life at all." The "depth and the extent and the intensity of the ignorance of the undergraduates" generally were unspeakable. But there were exceptions among both teachers and students. Christ College had the good luck to have a tutor, Enson, "who, for the first time in the annals of the College, actually concerned himself about the men individually; who stormed and bullied the indolent and encouraged those who worked." Hence a succession of able men whose names are given. Skeat, the Anglo-Saxon scholar, was one of them, Seeley another, Robertson Smith a third. But the emphasis is on the poet Calverley. He was already a bachelor when Besant entered, and, soon competing for a gold medal for an English essay, Besant won it and was bracketed with Calverley. By that incident the two men were made friends. One day Calverley came to him and said, "I've got a young Frenchman. He's clever. Come and be amused." Besant went and was amused. The young Frenchman "told quantities of stories in a quiet, irresponsible way," and, after two or three hours of port, he sang Italian opera in the finest style. Why not "Ben Bolt"? for he was George Du Maurier. Besant writes down his own university course as creditable, but not highly distinguished. It was certainly not distinguished for an active piety. He attended Holy Communion but three times in his three years—all three in the last two terms; and for this scandalous behavior nearly lost his certificate. No wonder his Cambridge residence made holy orders impossible for him. The wonder is that he "did not as yet understand this important fact." It knocked all his literary aspirations on the head. "Writing had to wait." But it improved his manners, and for this he was properly grateful. It widened his mind in every imaginable way.

After graduation there was a tramp abroad with Calverley and two other Cambridge men, which, for Besant, meant a great deal. He came back to England to find trouble brewing. He had passed a theological examination and was now to pass the Bishop's. "I put myself," he says "in communication with the Bishop's secretary, and with great depression of spirits prepared myself for perjury, because by this time I understood that the white tie would choke me." It was rumored that he was not sound on the Atonement, but his name and credentials were sent to the Bishop. "And then—oh, happiness! a door of release was thrown open." His choice was given him of two colonial professorships. He chose Mauritius, South Africa having snakes. There he lived six years and a half. He writes little of the college, where a continual fight was going on between the rector and professors, but had he been consciously looking up material for his novels, he could not have been better placed. Some of his experiences are narrated in his most vivid manner. There was a visitation of cholera; another of the plague. Finally, he got away on a year's furlough, and never went back. On the way home he got in more rough material for his novels, the Cape of Good Hope justifying its other name—the Cape of Torments—and the officials at Cape Colony showing him the first diamond found in those parts. It emitted no gleam of recent happenings. Resolved not to go back to Mauritius, he turned to literature for a livelihood, with a confidence that was amazing in his retrospective eyes. Before his 'Early French Poetry' was published (1868), a great piece of luck came to him in the post of secretary of a Palestinian exploration society. He held the office eighteen years. Besides a certain income, it brought him the friendship of the Arabic scholar, Palmer, which meant a great deal. His term of service was signalized by a great find—the Moabite stone—and a great fraud, viz., a contemporary copy of Deuteronomy, which deceived some of the very elect. Shapira, the forger, wanted a million pounds for his parchment. Being discovered, he went out and hanged himself, leaving with Besant the leaden cover of Samson's coffin—but about that Shapira was not quite certain. Neither was Besant. But for the secretaryship, Besant is sure that he could never have realized his literary ambition, and he advises all literary aspirants to get a position of that kind. "Anything, anything, rather than dependence on the pen, and the pen alone!"

A chapter on Sir Walter's literary work, outside his fiction, is too detailed to recapitulate. In the next following he pays his respects to the "critics and criticasters" in his familiar strain. Let the galled criticasters wince, the honest critics be consoled. The same chapter tells the story of Besant's collaboration with James Rice. He declines to explain its method because Rice died in 1882. But they worked without regular partnership and without disagreement, each carrying on meantime his independent work. The arrangement lasted ten years and produced as many successful novels. Nevertheless, Sir Walter pronounces decidedly against the method. "There will come a time when both men fret under the condition; when each desires, but is not able, to enjoy the reputation of his own good work; and feels, with the jealousy natural to an artist, irritated by the loss of half himself, and ready to accept the responsibility of failure in order to make sure of the meed of success." Of the books Besant wrote with Rice, he liked best 'The Chaplain of the Fleet,' and thought it perhaps the best of his eighteenth-century novels.

From 1882 onward he was "The Novelist with a Free Hand," and wrote eighteen novels in as many years, with great enjoyment, fancying each the best while he was writing it. Each took him eight or ten

months, from start to finish. This means a thousand words a day, but he had no such command of his talent as Trollope, who could grind out his stint on shipboard as easily as in the quiet and still air of his own study. There is a good account of Besant's methods, which he compares to the boring of a tunnel, the rough blasting going on ahead, while the completion often slowly follows. He thinks 'Dorothy Foster' the best of his eighteen unassisted novels. This was one of four eighteenth-century stories. There are brief comments on all the others. 'The Fourth Generation' is the most serious. He rejoices in them all, in the troops of friends that they have raised up for him, and "a whole army of enemies—exactly such enemies as one, at the outset, would desire above all things to make": "the spiritualist fraud," "the sickly sentimentalist," "the shrieking sisterhood"—these in revolt against his 'Revolt of Man.' The philanthropic novels, 'All Sorts and Conditions of Men' and 'Children of Gideon,' are assigned to a separate chapter on his "Philanthropic Work." The story of the Palace of Delight, which grew up from the former of these as a foundation, is one of melancholy failure in the main. 'The Children of Gideon,' as an attack on the sweating-shops, did not do much better. Those sweated were too anxious to become sweaters in their turn. In this connection Sir Walter strikes out boldly for the Salvation Army and at Professor Huxley. He does not estimate highly his own speech-making, but thinks he made one good speech, and it was in defence of the Salvation Army.

Strangely enough, he forgets to write as he intended on the Society of Authors, in which he took great interest and a leading part, and the omission has been corrected by the introduction of a speech he made on the subject in 1892. It lacks the freedom of the other chapters. His London studies get honorable mention, and in conclusion we have "The Conduct of Life and the Influence of Religion." Here he recurs to his early London loneliness and his evening amusements. It is encouraging that he thinks that such amusements were much coarser then than now. At Cambridge there was a suburb called Barnwell, apparently given over to "lubricity," which was patronized by fellows of colleges and men intending holy orders. As for his religious opinions, "having shovelled away the evangelical rubbish, [he] was ready to make a clean sweep of a good deal more." But he never became agnostic. His simple creed was that of the radical Unitarian. He reserves for ritualism his hardest blows. He finds all sacerdotalism repulsive, and ritualism merely its absurdest form. "Now, at last," he says, "there is not left to me a single rag or scrap of the ecclesiastical rubbish."

There is an excellent portrait which seems to take him in the act of thinking in this fashion. It represents a man who was sturdy, wholesome, honest, but not delicate; not one of the finer spirits.

MORE FICTION.

Michael Ferrier. By E. Frances Poynter. Macmillan Co.

A Double-Barrelled Detective Story. By Mark Twain. Harper & Brothers.

The Opponents. By Harrison Robertson. Charles Scribner's Sons.

In the Country God Forgot. By Frances Charles. Little, Brown & Co.

Sarita, the Carlist. By Arthur W. Marchmont. Frederick A. Stokes Co.

The Sport of the Gods. By Paul Laurence Dunbar. Dodd, Mead & Co.

Bread and Wine. By Maud Egerton King. Houghton, Mifflin & Co.

Roman Biznet. By Georgia Wood Pangborn. Houghton, Mifflin & Co.

'Michael Ferrier' affords space to breathe from history, warfare, and dialect. It is a love-story of modern England without drawbridge and without Napoleon. We regret that the clever authoress found a pistol indispensable when all was going so nicely uncomfortably without it. But—if one can forgive her for turning a novel of manners into a tragedy, in a day when our books need tragedy so much less than they need manners—we can allow that she has done it ably, and so as to convey a genuine fillip of consternation. The characters stand out alive and well defined. The writer's skill and delicacy in this branch of her art have led her into too great minuteness here and there in introducing accessories and in describing them, their natures, their consorts, their previous conditions of servitude, or otherwise. But it is all done with the pen of literary good breeding, and the book is not so long that one need quarrel seriously with anything that extends it.

"A novelette in which the author enters upon a field that is entirely new," is the official motto for Mark Twain's latest story. As one reads it and balances the claims of Sherlock Holmes *in propria persona* with those of the boy born with a bloodhound's scent, the question arises whether this is likely to be the corner-stone of a new school—whether in Conan Doyle's next book the sub-hero will be Tom Sawyer; whether Seton-Thompson will exploit the jumping frog; whether possibly, as the movement grows apace, Winston Churchill may not take as his hero Oliver Herford, and Henry James write a novel about Mark Twain. The consideration that makes against it is that happily Mark Twain is inimitable.

Mr. Robertson's first chapter reads almost as vengefully as Mark Twain's. Like that it is of injury, of vengeance that aims far deeper than killing—that would condemn its victims to lifelong torture. In the former case burlesque comes tripping in to apply poultices, while in 'The Opponents' the rather sensational opening has a coherent and even righteous sequel. The self-appointed judge and executioner lives to see what evil he has wrought his own nature by trying to take upon himself the functions of Providence. His ascent to a loftier moral plane is not wholly natural. When middle-aged suitors feel themselves unworthy of nice young maidens, they are not often self-convicted to the point of telling them in what shady ways their political paths have lain. In fact, Morgan Tunstall is an improbable combination of scruple and the reverse, although he is made very present to the reader. If the theme of his revenge and reconstruction is somewhat forced, the treatment is in a marked degree self-contained and satisfactory. The political background of the story is uncommonly successful, and the episode of the toll-gate raids lends novelty to the oft-told tale of Kentucky elections. Some fine old Kentucky characters, black and white, exude humor without pain. The love interest is enlivened by the agreeable naturalness of the women; the heroine's hesitation between the attraction of masterful power on one side and energetic youth on the other, being very humanly seen and told. Mr. Robertson may be congratulated on a work of more than usual substance, accomplished with a nice sense of symmetry.

'In the Country God Forgot' has a fibrous strength of its own. The sky and the cacti and the droughts of Arizona are stamped in on the brain as one reads. The characters loom forcibly out of the arid air. The plot is slight but sufficient. But the way of telling is quite intolerable. The involutions, affectations, crudities, elaborations are as irritating to the spirit as the dry atmosphere of Arizona to the skin. It is Margaret Fuller and Pater translated into Yankee Doodle language. As one rises from the reading—no, one does not rise, one falls back exhausted—there is a positive Arizonian thirst for simple statement, as of the multiplication table, or "Mary had a little lamb."

The story of adventure and the domestic drama will soon be one, for former ages are well-nigh depleted of their harvest. The Wheel of Things has forced the writer forward, and now he gives us the doughty deeds of the last three centuries with the *dramatis personæ* of to-day. The swashbuckler of Mr. Marchmont's story might have been a Russian, a Gentleman of France, or whatever, but remains, spite of all temptations, a simple Englishman; as valorous as a third of Three Guardsmen, as single-minded as Sir Galahad (we thank him for that), as lady-beloved as the first-person hero always is, as indispensable as Richard Carvel, as astute as Sherlock Holmes, as effective with pistol and fist as a Knight of Zenda. It would not be surprising to learn that Mr. Marchmont had read the 'Prisoner of Zenda,' by the way. If the mind be attuned to these perfections, and if it does not give one a chilly feeling to find the Queen Regent and the young King of Spain under personal obligations (personally and chummily expressed) to the hero of 'Sarita,' then the reader need fear no drawback to the enjoyment of a lively, eager-flowing story. Risks and escapades, private and political, keep up a rattling pace through more than four hundred pages, yet it can be truthfully conceded that the interest does not languish. There are no snags of disquisition to arrest the current which carries one far but fast. The novel is, furthermore, marked by the cleanliness which in a novel is even more requisite than godliness. And all ends as it should: the wicked are cut down without crime; the good inherit fortunes and wives. (There are no meek.) The rejected find comfort in others or in convents.

Mr. Dunbar's story is of a negro wrongly imprisoned for theft, of the hounding of his family out of a Southern town, of their degradation in New York, whither they take their flight, of innocence reëstablished when it is too late for anything but a ghost of happiness. The picture of sordid downfall and crime in the city reads no more pleasantly of blacks than it would of any other race. But it stands as a plea

against an indiscriminate Northward and cityward rush by those for whom "good agriculture is better than bad art." The crime is shifted from innocent black shoulders to guilty white through the instrumentality of yellow journalistic greed; the neighborhood colonels and judges profoundly regretting the act of justice that brings a distinguished Southern family to shame. The story is thus of unrelieved wofulness; its moral, that the negro has no chance against unjust suspicion in the South, nor any against ruin in New York.

If the Gentle Reader is not extinct, he may solace himself with 'Bread and Wine,' a story of Davos, dealing with the natives, where a little human weakness is the darkest shadow, where family affections furnish the high lights, where the scene is the winter valley or the summer Alp; where the breath of cows sweetens the pages, where mountain brooks tinkle, Alpine rose and gentian bloom, and little children tell fairy stories in the woods. Pastoral, natural, and sincere, it sets the Tyrolese jodel in a key novel enough to seize and soothe the ear.

How nice it would be if the novel of heredity should now and then show that good as well as evil traits are transmitted! It is always the ancestral murder and madness that come out in the text; truly the foreparents of fiction are a sorry lot. Roman Biznet was peculiarly unfortunate in his. His father forged, stole, and committed more than one revolting murder; his Indian grandmother slew her (it must be admitted) objectionable German husband with an axe. Both grandfathers played the fiddle, and Roman inherited their musical genius, a sloping forehead, and two warring natures. As a boy, half of him teased, stole apples, wandered at night like a wood creature; while the other half played on the piano and made all the women like him. As a man, he was double-natured, too. He played the 'cello, composed music, and remained popular with the ladies, while he had a temper that was annoying to say the least; deceived the rich lady who brought him up, pinched and threatened, and had slaughterous dreams, particularly when the medical student had given him morphine. A fight between father and son closes the story. "They bit, tore, scratched, fighting grotesquely as anthropoids may have fought before men were."

The victory for the moral side of Roman Biznet will strike the reader as a very doubtful one, we think. But let us hope for the best. The story is not all of fights and morphine. There are domestic, schoolroom, and farmyard scenes in a northern New York settlement, and various studies of various human types, less anthropoid than the Biznet family. Dr. Winthrop is one character with whom one can be wholly in sympathy. In differing degrees we put up with the others—the narrow-minded aristocrat who adopts and makes miserable the orphan children; Elizabeth, who is poetic and untidy; Kitty, who is impervious to cultivation; Maud, who is patrician, but reads letters not meant for her. The strength of the study, the originality of the types are undeniable, but the evolution of a man out of generations of musical beasts is not comfortable reading. Even worse as to taste are remarks thrown in gratuitously here and there, mainly about hair. In fact, although a clever book, 'Roman Biznet' moves in an atmosphere disagreeable beyond the disagreeableness of theme. We do not expect the jovial in a psychological novel, but we should like matters to be less creepy, and we should like to think the hero worth redeeming. The fault of overloading with incident is natural and venial, for it is a "first novel," we are told, by "a member of the class of '96 at Smith College." No indulgence need be extended to the style, which is unaffectedly terse. A quick and incisive power of observing is turned to account. There is no trace of what Green calls "a forced muddy-boot originality." The story is spontaneously planned and told. Possibly the unpleasantness is too spontaneous. There is true sentiment in a phrase like this: "A warm wind seemed looking nervously among the bushes for something that it could not find but must have at once if some calamity were to be averted." The trouble is that the book makes the reader feel like that warm wind.

A NEW ESKIMO GRAMMAR.

Grammatical Fundamentals of the Innuit Language, as spoken by the Eskimo of the Western Coast of Alaska. By the Rev. Francis Barnum, S. J., of Georgetown University, D. C. Boston: Ginn & Co. 1901. Large 8vo, pages xxv, 384.

This well-printed volume contains grammatical notes and a vocabulary of the Eskimo dialect spoken from Norton to Bristol Bay, on the Western Alaskan coast, collected by a missionary of the Jesuit order. Father Barnum started for the Alaskan mission in June, 1891, and established a mission-house at Tununa on Nelson Island, opposite Nunivak. With a companion belonging to the same religious order, he valiantly struggled against the rigors of the climate, while simultaneously striving to conquer the oddities of an eminently polysynthetic language. Nature herself seemed to oppose her mightiest obstacles to his efforts, for frequently he risked having his hand frozen when removing the mitten in order to make a memorandum of some expression that seemed of importance to him in the pursuit of his studies. To bring his manuscript to its degree of perfection, Father Barnum subjected it to subsequent revision for eight years, and is still conscious of many weak points in the lexical as well as in the grammatic portion. In acquiring the language he was aided by the almost absolute uniformity of dialect observed even in villages a thousand miles distant from each other. Many previous travellers have expressed their astonishment at the same fact, which is explained by the great paucity of natives inhabiting those coasts.

Father Barnum uses an alphabet of fifteen vowels, three diphthongs, and seventy-one consonants to write down his dialect. The letters are given the values they have in the English alphabet, which he finds more appropriate than others to express the sounds heard in Eskimo. This is a debatable point, in which the majority of linguists will certainly differ from our missionary. By means of diacritical marks he manages to distinguish four kinds of *a*, two of which would be expressed by *e* by those using the standard alphabet of Lepsius. One of his two *e's* is *i*, and of diphthongs there seem to be only *au* and *ya* in the languages. In the use of macrons (-) and breves (˘) Father Barnum is certainly too liberal; he puts one of these two marks on every one of his vowels, instead of simply stating that vowels without the macron should always be considered short. Accenting the stressed syllable is another short way of obviating any misunderstanding in this respect, and, generally speaking, our author's phonetic transcription must be set down as too artificial.

The most characteristic feature of all Eskimo dialects is their high degree of polysynthesis and their large incorporating faculty. In these points they seem to be more richly endowed than all other languages in the world. The numerous modes and voices in the verb, the wealth of nominal cases, are surprising; the number of particles that can be inserted in the word is almost unspeakably large. That nouns can be inflected for tense we notice in many American languages, but here it is the "regular thing." In the noun the locative cases are superabundant, and quite specific in their meanings. The dual, which has disappeared from most languages that ever had it, is prominent in Eskimo, in the noun as well as in the pronoun and verb; noun-forming suffixes able to form a number of derivatives from verbal stems are in abundance also.

What Father Barnum calls *modes* we should define as adverbs incorporated into or suffixed to (Eskimo has no prefixes) a verbal stem; they either refer to action, and then are transitive, or to being, and then are intransitive. They are inserted immediately after the stem or root of the verb, so that a verb consists of a stem followed by one, two, three, etc., modal particles, and closes with the person-suffix. One of the modes, *e. g.*, corresponds to our inchoative verb, stating that "the act is about to begin"; it is characterized by the suffix -atatoa. These inserted particles, forming modes, have to follow one another in the following order: particles of mode, of adjutant, of negation, of object and number or tense, and finally of person (page 176). The term *adjutant* corresponds to what we call subordinate sentences introduced by causative or temporal or conditional, etc., conjunctions. The author gives a list of 170 modes with their characteristic particles.

The objective inflection is also rich in forms. Verbal stem comes first, then the index of tense, combined with the pronominal object, then the personal subject pronoun which closes the word, in the quality of a suffix. The negation *not* is intercalated between the stem and the temporal index, and lengthy paradigms of the negative forms are subjoined, in the three tenses, present, past, and future. The two interrogative paradigms, one positive, the other negative, have again their three tenses for each of the three persons (pp. 117, 119).

The fact that the substantive verb *to be* does not exist in the language, causes a number of attributive verbs to come into existence, the most cumbersome adjunct imaginable for verbal inflection. On page 96 Father Barnum produces a long array of "locative verbs," in which adverbs become verbified by the suffix -tok.

The words called by us prepositions and adverbs can also be converted into verbs by incorporating tense-marks, case-marks, and possessive pronouns. Each one of them has at least two cases, the *vialis* and the

terminalis, and the result is that any adverb or preposition can with these helps be made either a noun or a verb. When an adjective is formed from an adverb it is personified and placed in one of the three numbers, singular, dual, or plural, and, moreover, provided with case-endings (pp. 98, 99). Synthesis, not analysis, is the absolutely dominant rule in Eskimo morphology.

In view of all these facts, the want of any grammatic gender cannot surprise us, for the contrast between masculine and feminine never entered to any tangible extent into the spirit prevailing in this and in other American languages; it was the contrast between animate and inanimate that was sought to be expressed, and even of this the distinction is often left to be decided by the context.

The numerals form a very polymorphic part of speech in Eskimo. There are to be found not only our cardinals, ordinals, distributives, and adverbial numerals, but also series like "one by one," "seven by seven"; or, "there are five," "there are six"; or, "I got four," "I got five"—all expressed by *one* single word. "I am in four, five places" is also expressed synthetically in one single verb. This is enough to teach us that the Eskimo has some difficulty in thinking of a numeral abstractly, as he prefers to combine it with some verb or other expression, and thus creates manifold new inflections for it. The Eskimo numeral system is the quinary one.

A number of attractive "Native Stories," obtained from individuals who act as story-tellers, are given from page 270 to 299, with glossaries and translations. They form a needful complement to the grammar, and greatly help in exemplifying the dry rules of morphology and syntax found at the beginning of the volume. A few popular songs are inserted on pages 309-311.

Farther Barnum's collection of vocables extends over the dialects spoken at Tanuna, Kuskokwim, St. Michael; the words are presented in their simple or radical form only, most of the compounds having been excluded. There are between five and six thousand words in the list, all being syllabicated and accented with punctilious care. The language of which Father Barnum treats is called by him the Innuit language, and the people speaking it, the Eskimo. These natives call themselves Inuit, men, not doubling the *n*, for the singular is inok, inuk, man. The customary use of the plural Innuits is like speaking of the "Apaches" language, or of the "Cherokees" language. As to Eskimo, this word means "raw eater," and corresponds to the Mexican *comecrudo*, which has also been used as a tribal or national name. These people, again, do not so call *themselves*.

Father Barnum's volume has given to science the latest details of an Eskimo dialect comparatively *new* to us. Every work of this sort has to contend with numerous difficulties not apparent to the majority of students; to have achieved as much as he did in eight years is highly creditable.

Poverty: A Study of Town Life. By B. Seebohm Rowntree. Macmillan Co. 1901.

The depressing title of this book is fully justified by the dismal records which it contains. The town whose life is studied is the city of York, in England; a town having a population of only 75,000, but as much and as wretched poverty, in proportion, as London. Indeed, Mr. Charles Booth, whose opinion on such matters commands universal respect, declares his belief that other English cities would show a percentage of poverty not differing greatly from that existing in the metropolis. Mr. Booth, it may be added, bears witness to the thoroughness of the present inquiry. Mr. Rowntree's methods, he says, are more complete than those he found available for the large area of London. In his celebrated investigation of the life of the London poor, he computed the number visibly living in poverty, and separated the cases in which poverty amounted to destitution; but he did not enter into the questions of economical and wasteful expenditure. This Mr. Rowntree has done; and he has also enumerated separately those whose income is such that they cannot by any means afford the expenditure which his inquiries point to as an absolutely necessary minimum.

Shutting our eyes to the painful nature of the subject and the startling character of the results of the inquiry, we can derive a certain pleasure from the genuinely scientific methods employed. The research has almost the beauty of a mathematical demonstration, and may justly be held up as a model before all who propose to ascertain the actual condition of any large body of men. In certain respects we conceive that the inductions are open to criticism; some important assumptions are made on evidence that requires scrutiny. Before taking up these questions, however, it is desirable to state precisely what Mr. Rowntree has done.

In the first place, the facts concerning the numbers, the occupation, and the housing of the working people were ascertained by direct inquiry covering practically every family of this class in York. To a certain extent, earnings also were ascertained by direct inquiry, but in most cases accurate information was otherwise attainable. By various methods the minimum weekly expenditure on which merely physical efficiency can be maintained in York was determined. The number of persons whose earnings are so low that they cannot meet the expenditure necessary for this standard of living was thus calculated to be 7,230, or very nearly 10 per cent. of the total population. One person in every ten, therefore, in the city of York, and presumptively in the other cities of the United Kingdom, is actually suffering more or less acutely from starvation.

Families whose total earnings would have sufficed to maintain mere physical efficiency had they not been wasted or otherwise employed are said to exhibit "secondary" poverty. By house-to-house visitation the number of persons in this condition was ascertained to be 13,072, or 17.93 per cent. of the total population. The number of persons in York living in poverty is therefore 27.84 per cent. of the population. Mr. Booth's inquiry indicated that the percentage in London was 30.7 per cent., and the close correspondence of the figures goes far to prove the accuracy of the methods employed. Mr. Booth's figures were for the period 1887-92, when trade was less prosperous than in 1899, the date of Mr. Rowntree's investigation. The condition of the rural population has not been so carefully studied; but it is now only 23 per cent. of the whole, and we are forced to admit the probability that from 25 to 30 per cent. of the people of the United Kingdom obtain less of the necessaries of life than are required to maintain their bodily efficiency. One person out of every four in the richest country in the world except our own is, therefore, to a greater or less degree, starved.

The minimum weekly expenditure on which physical efficiency can be maintained in York by an average family—father, mother, and three children—is determined to be 21s. 8d. For rent, 4s. is allowed; for clothing, light, and fuel, 4s. 11d.; and for food 12s. 9d. The wage-earning classes in York number 47,754, and the average earnings of the family amount to 32s. 9d. per week. This income is made up of the wages of the father, of the mother, of children earning not more than 7s.; of payments for board and lodging by older children, and of payments by lodgers. But families numbering altogether nearly 6,500 persons have incomes under 21s. per week. Families numbering 15,710 persons, or one-third of the working class, have incomes averaging 26s. 7d. Families numbering 24,595 persons, or 52.6 per cent. of the working class, have incomes averaging 41s. 9½d. The conclusion cannot be avoided that over 20,000 persons, or 43 per cent. of the working class in York, live, to say the least, in indigence. What is signified by the limitation of expenditure to the absolutely necessary minimum will appear from the following statement:

"Let us clearly understand what 'merely physical efficiency' means. A family living upon the scale allowed for in this estimate must never spend a penny on railway fare or omnibus. They must never go into the country unless they walk. They must never purchase a half-penny newspaper or spend a penny to buy a ticket for a popular concert. They must write no letters to absent children, for they cannot afford to pay the postage. They must never contribute anything to their church or chapel, or give any help to a neighbor which costs them money. They cannot save, nor can they join sick club or trade union, because they cannot pay the necessary subscriptions. The children must have no pocket money for dolls, marbles, or sweets. The father must smoke no tobacco, and must drink no beer. The mother must never buy any pretty clothes for herself or for her children. . . . Should a child fall ill, it must be attended by the parish doctor; should it die, it must be buried by the parish. Finally, the wage-earner must never be absent from his work a single day. If any of these conditions are broken, the extra expenditure involved is met, *and can only be met*, by limiting the diet; or, in other words, by sacrificing physical efficiency."

Of course most of these conditions are constantly broken, and must be; therefore physical efficiency suffers. The results appear in stunted growth, feeble health, deficient weight, abnormal susceptibility to disease, and an excessive death rate, especially among young children. They appear also in drunkenness, vice, and mental as well as physical debility. The children suffer most, or the mothers, according to the devotion of the latter; the father must eat, or the sustenance which depends upon his wages will be cut off. Some help comes from public, much from private charity; most, perhaps, from those who have but little beyond their own needs.

Possibly, as we have suggested, the minimum expenditure for food is put a little

too high. Mr. Rowntree accepts, after due comparison, the results obtained by Prof. Atwater in this country. The "standard of life" is higher here than in Europe. "Considering the body as a machine," Prof. Atwater says, "the American working man has a more strongly built machine and more fuel to run it than has his European brother." Hence he is capable of and performs more muscular labor. Conversely, the foreign laborer does not require quite so much food in order to do his work. If he is smaller, and does not work so hard, he can exist on less food. A horse doing moderate work may exist, and even thrive, on hay. If he is to do more work, he must be fed with grain; and a large horse needs more food than a small one. But the possible reduction from Mr. Rowntree's standard is very small; and we cannot escape the conclusion that if the poorer class of laborers in England were better fed, they would presently increase in physical size and in physical efficiency. Their condition has greatly improved within a century, and had it not been for the deplorable mania for "empire" which has lately affected the English people, it would have continued to improve. But when a nation spends a thousand million dollars for glory, the poor cannot escape paying their share; and increased taxation for such an end means increased poverty.

The Brothers Dalziel. 1840-1890. With selected pictures by and autograph letters from Lord Leighton, etc., etc., etc. London: Methuen & Co.; New York: Dutton. 1901. Small 4to, pp. 359.

Any one whose notice and recollection of wood-engraving antedate the rise and culmination of the American school, needs no introduction to the genial George and Edward Dalziel, who here modestly celebrate themselves. Their narrative is loosely chronological, and is copiously illustrated by specimens of their woodcuts in connection with each artist as brought upon the scene. Edward, himself a designer, is occasionally thus represented, as is Thomas, who began with copperplate, and E. G. Dalziel (eldest son of Edward). Another brother, John, associated with the firm, died in 1869. From 1851, Margaret, one of four sisters (there were eight brothers, all artistically minded), also assisted with the blocks. Portraits of this generation and of the parents heighten the interest of the retrospect.

The Brothers are discursive, and diversify their story with character sketches, anecdotes, letters (often in facsimile), in a way to offset the catalogue nature of their book. They were natives of Northumberland, and the youngest was born in Newcastle-on-Tyne, the seat of the revival of wood-engraving under Thomas Bewick. Bewick had been seven years in his grave when George Dalziel came up to London to learn the art under John Gray, a pupil of Nicholson, who had been Bewick's pupil. George's brother Alexander was also taught by Nicholson. In the early forties the new firm had much to do with the eccentric Ebenezer Landells, one of the projectors and original proprietors of *Punch*, who, having begun with Bewick, had finished under Nicholson. The Brothers Dalziel were, further, on the most cordial terms with William Harvey, Bewick's favorite pupil. The Tyneside tradition, therefore, came down very straight through our authors, but it is something of a disappointment that they have forborne to review the progress of the technique of wood-engraving, or the decline and fall of the craft. In a chapter regarding their own pupils—among them, Harry Fenn, who came to America to make his reputation—we read of Hal Ludlow (p. 350):

"His work had become so popular that Mason Jackson came to us on behalf of the *Illustrated London News*, to know if we would allow Ludlow to make drawings on wood for that journal, saying, 'it was a pity that such clever drawings should all be reproduced by process,' which he regarded as an inferior manner of rendering them. What a change has come since that period! How completely has the then thought 'superior' manner had to stand aside for the inferior! [The Dalziels closed their engravers' office in 1893.] We may here state that, in the long past, we always thought some automatic process would be perfected for the proper reproduction of point work, or what was always known as 'facsimile' drawing."

William Harvey died at seventy in 1866, but, remark our authors, "even in his own time what changes took place! He said that in his early days if merely a frontispiece were wanted for a book, John Murray would invite him and John Thomson, the engraver, to dinner at Albermarle Street, that they might discuss the subject fully before beginning the work" (p. 15). As to the designers' preparation, we are informed (p. 41):

"In Kenny Meadows's days, the artist in black and white had not thought of the advantages of drawing from the living model; neither William Harvey nor Sir John Gilbert ever drew from nature, and George Thomas was one of the first, if not indeed the very first, to draw on wood direct from life. This was about the early part of the Crimean war. . . . No doubt Mul-ready had life models for his 'Vicar of Wakefield' drawings, and, later on, Millais never drew without the life, nor did any of the pre-Raphaelite school; but this was the gradual and natural development of a new method, and innumerable drawings by the younger artists which passed through our hands were all drawn direct on wood from the life."

These drawings were so beautiful in themselves that the Dalziels sought to preserve them by "getting fairly good photographs for the engraver's purpose on other pieces of wood. . . . Then followed, as a matter of course, the constant practice of making drawings upon paper which were photographed on wood." It was the invariable custom of the gifted and amiable Birket Foster "to make small water-color sketches for his more important black-and-white work; sometimes they were partly pencil, or pen and ink tinted." Foster, by the way, had essayed wood-cutting under Landells, but made no progress.

"Among the early drawings by John Leech that passed through our hands, were those he made for Thackeray's 'Irish Sketch-Book,' which were probably copied from Thackeray's own pencil work, for he was not above having help on his drawings, the result not always being such as he expected." Dicky Doyle

"had a facile pencil when once fairly at work, but he was singularly deficient as to the value of time. . . . On one occasion, when illustrating a story by Thackeray, the number had to be issued short of certain pictures that had been arranged for. Thackeray was a good deal annoyed, and asked Doyle if he could give any reason why he had not done the drawings. He replied, in his cool, deliberate manner: 'Eh—er, the fact is, I had not got any pencils.'"

"Half a dozen of the *hardest*" was his requirement, as appears from an undated letter here given. It was Doyle who introduced the Dalziels to Millais, and one of the most interesting facsimiles is of a letter (p. 84) in which Millais gives minute directions for retouching a woodcut after his design, and sketches the parts in question.

When Fred Walker came out of school with an ambition to be an illustrator, he took counsel of the Dalziels, who "advised him to begin by copying, in pen and ink, pictures from the *Illustrated London News* and other illustrated periodicals, specially recommending the works of John Gilbert and Birket Foster as the best models for style and manner." One wonders what old Bewick would have said to this.

Had we picked out the plums of personal anecdote we could have made a more entertaining notice of this handsome volume, but our aim has been to show its relation to the history not of book illustration but of wood-engraving. The latter relation, we feel, might have been much more valuable. Still, no one can peruse this record of a talented family without being greatly attracted to the chroniclers as thoroughly lovable men, strongest as wood-engravers, not remarkable as designers or as poets; generous patrons of art, undertakers of great art publications, and founders of the Camden Press, still flourishing in the hands of their posterity, as this product testifies.

The Amherst Papyri. Part II. Edited by Bernard P. Grenfell and Arthur S. Hunt. H. Frowde. 1901.

This work, published by the Oxford University Press, contains certain classical fragments, and many documents of the Ptolemaic, Roman, and Byzantine periods, besides some theological fragments, chiefly from the 'Shepherd' of Hermas, which have been identified since the issue of Part I. Such a collection is always a lottery, and this particular lottery offers nothing so striking as the "Words of Jesus," the poem of Sappho, the list of Olympian Victors, and the long petition of Dionysia, which made the Oxyrhynchus papyri so rich in agreeable surprises and in legal information. On the other hand, the present volume must be consulted by every student of the original sources for the social and legal conditions in Ptolemaic and later Egypt. The student of palæography will also find in it an almost unique series of specimens, ranging from the third century B. C. to the seventh century A. D. Many of these can be dated with absolute precision and others with close approximation. They supplement, therefore, and modify in some interesting particulars the history of this science and the statements in Mr. Kenyon's treatise on the subject.

The fragments belonging to the classical period include fifteen broken lines of an unknown tragedy, pieced out in part by Blass, and possibly, as he surmises, from the "Νηρηίδες" of Aeschylus, and a slight trace of the "Sciron" of Euripides. A brief commentary by Aristarchus on the first book of Herodotus rescues for us a short quotation from the "Ποιμένες" of Sophocles, and confirms the special meaning of the word ἄμιππος. Another papyrus of the early fourth century A.D., containing three fables of Babrius, is very curious as pre-

senting a bad Latin translation, dictated, apparently, to a scribe who knew less Latin than the translator. In it occur the unheard-of and problematic Latin forms *frestigiatur*, *babbandam*, and *sorsus* as a translation of πλήρης. The Greek text, though inferior to the Athous manuscript of the British Museum, yet has its value in showing that the form of the eleventh fable and a suspected reading (βαλόντος) go back to the fourth century, and that an alphabetical arrangement of the fables dates back to the same period.

The miscellaneous documents supplement our information about the administration of Egypt, and also with regard to many technical and legal details. Though they furnish many coincidences of months in the Egyptian and Macedonian calendars, yet they do not afford sufficient data to settle the perplexing question of the Macedonian calendar and its relations to the Egyptian. They do, however, determine the date of certain Egyptian prætors, and incidentally extinguish one imaginary official (Dioscurus, A. D. 105). They show that the Government monopoly in oil, as practised by the Ptolemies, was much relaxed under the Roman period, though certain other administrative methods persisted even into the Byzantine period. They give frequent hints of conflicts between the Egyptians and the Greek settlers under the later Ptolemies; the Egyptians complain that they are overreached by the Greeks in the apportionment of certain lands, while the revolting Egyptians (B. C. 165) burn and destroy title-deeds, a proceeding aimed against the Greeks. Still, under the Ptolemies, the prevailing impression we receive is of a reign of law and of the tax-gatherer. It was the excess of these civilizing agencies rather than their deficiency that the inhabitants might complain of.

This is well shown by a detailed instance of the administrative processes, preserved with unusual completeness in Papyrus 31. The document dates from B. C. 112, in the reign of Soter II. Senpoëris, daughter of Onnophris, surreptitiously enclosed a piece of desert land (about 55 square metres) with a view to planting date-palms. An overseer of the revenue, while collecting taxes in the neighborhood, gets wind of this encroachment, visits the spot, probably applies torture (πειθανάγκη), and extracts a fine together with twice the ordinary taxes. This fine is paid over to a banker, and the transaction requires the signature of the overseer of the revenue and of the royal scribe, fortified by the certificates of two minor officials that the land measurements are correct. Senpoëris survives to pay two years later a Government tax of 10 per cent. on the purchase price of a house and land. The collection of revenue was naturally carried out with great rigor. Granaries were sealed by Government agents, and were not released (ἄφεσις) till they were assessed and the taxes paid—a procedure similar to that of the Turkish Government in the sixteenth century. Moreover, parties suspected of defrauding the revenue were expressly deprived of the assistance of advocates. Advocates who dared render assistance in such cases were themselves subjected to heavy penalties and disabilities by a decree of Philadelphus, cited in an interesting petition of certain landholders (No. 33), wherein they accuse a Komarch not only of peculation, but of the further misdemeanor of bringing advocates to plead for him in the royal court.

A notable feature of the present collection of documents—quite familiar, however, in Egyptian jurisprudence—is that in all business and legal transactions the women are rather more in evidence than the men. They make loans and purchases, inherit property, and execute contracts of every description with remarkable freedom and apparent equality before the law. The custom of intermarriage between brother and sister is strikingly illustrated in several of these fragments. A census return by a certain priest, Panephremmis, reports himself as forty years old and married to his full sister, aged seventeen. A petition by a certain Demetria in behalf of her son, claiming exemption from poll-tax for him on the ground that he is descended on both sides from a gymnasiarch, gives the family tree for five generations, which offers three successive instances, on the mother's side, of marriage between own brothers and sisters. The names, too, in this genealogy are all Greek, with a single exception. A family correspondence of the second century A. D., between Sarapion and his son, and a sister who was probably his wife, is occupied with questions of crops and laborers and clothing and money; the son, however, shows genuine anxiety about his father's health. But expressions of affection come high when papyrus costs three obols a sheet, and when, in a memorandum of expenses, we find the single item of papyrus set down for 80 drachmæ, against 100 drachmæ for travelling expenses. The Greek of these excerpts, corrupt and misspelled as they often are—in fact, by reason of their misspelling and corruption—constitutes in itself an interesting study, ranging as it does far into the Byzantine period. The fragments from the 'Shepherd' of Hermas, belonging to the sixth century A. D., add a little to the portions already discovered by Tischendorf and Professor Lambros; but the few lines of the lost ending are especially valuable because they coincide pretty closely with the Latin version, and furnish a clear proof of the forgery of Simonides.

It is superfluous to praise the work of the editors. Nothing has been omitted in the indexes and annotations to make the contents of the sumptuous book accessible and available.

Commonwealth or Empire. By Goldwin Smith. Macmillan Co. 1902.

No one can deny that Goldwin Smith is a true friend of this country; and his wounds are faithful. Up to the close of the last century, he tells us, the United States, if not the United States alone, represented the ideals of freedom. They were imperfectly realized, like all ideals, but they were recognized and respected. "The American Republic was the home of democracy and the hope of labor. It promised to do something more than the Old World towards correcting the injustice of nature, equalizing the human lot, and making the community a community indeed." Hence it was an object of alarm to the enemies of popular government, who hailed the secession of the Southern States with shouts of exultation. They hoped to see the end of a government founded on the principles set forth in the Declaration of Independence.

Shall their hopes now be realized? Against the commonwealth are now arrayed Plutocracy, Militarism, and Imperialism, three forces which instinctively conspire. The plutocrat is by constitution an Imperialist, and by necessity a believer in a standing army. We need not dwell on the present great power of aggregated wealth, for it is illustrated every day. Nor need we argue that its spirit is anti-democratic.

"Its ostentatious prodigality and luxury are a defiance of democratic sentiment and subversive of democratic manners. At heart it sighs for a court and aristocracy. It worships anything royal or aristocratic. It barters the hands of its daughters and its millions for European titles. It imitates, and even outvies, in some things, the gilding of European nobility. Its social centre is gradually shifting from America, where its inclinations are still in some measure controlled, to England, where it can get more homage and subserviency for its wealth, and take hold of the mantle of high society. . . . The political colors of American plutocracy were plainly shown on the occasion of the South African war. The drawing-rooms of New York at once declared themselves on the side of the drawing-rooms of London."

The relation of Militarism to humanity and to political liberty has been the same ever since the military power enslaved Rome. England owes her freedom to her immunity from standing armies. In this country we have had no standing army, for the armies of the civil war were citizen armies, and dissolved when peace came. Yet the army of the North gave birth to a great military interest, and its prodigious exactions in the shape of pensions show that our rulers do not dare to refuse its demands. Few of them dare even to criticise the conduct of the army in the Philippines; many of them go so far, in their anxiety to propitiate the military element, as to declare that our soldiers are justified in torturing the wretched people whom they are attacking, and that those who protest against cruelty are unpatriotic.

That this is a normal development of Imperialism is shown by the British rule in India. The Sepoys committed atrocities on the English at Cawnpore, and the English retorted with similar cruelties. The commandant at Cawnpore proposed impaling and burning alive as punishments. Lord Elgin said:

"It is a terrible business, however, this living among inferior races. I have seldom, from man or woman, since I came to the East, heard a sentence which was reconcilable with the hypothesis that Christianity had ever come into the world. Detestation, contempt, ferocity, vengeance, whether Chinamen or Indians be the object. . . . When the passions of fear and hatred are engrafted on this indifference, the result is frightful—an absolute callousness as to the sufferings of the objects of those passions, which must be witnessed to be understood and believed."

We need only read the current newspapers and the debates in Congress to recognize the spirit which Lord Elgin describes, and it is encouraged by the attitude of many of the clergy. We hear them dwell on the advantage of warfare, and an eminent English ecclesiastic even quotes approvingly the lines—

> "That God's most perfect instrument
> In working out a pure intent
> Is man arrayed for mutual slaughter:
> Yea, Carnage is His daughter."

Although this is a book of but eighty pages, it contains a whole arsenal of arguments against the abandonment of the prin-

ciples on which our Government was founded. Perhaps the argument as a whole is too condensed; it would be more effective with ordinary readers were it a good deal expanded. Professor Smith has history at his fingers' ends, so to speak, and he could fill in the framework here erected so as to make it a splendid and impressive treatise. As it is, his book should be read by all thoughtful citizens, as containing the views of a bystander who is not only friendly, but also competent beyond most other men to understand our situation.

The Story of Manhattan.—When Old New York Was Young. By Charles Hemstreet. Charles Scribner's Sons. 1902.

The clear, bold typography of these little volumes, and the clever illustrations enlivening them, correspond well with the simple style clothing the historic statements they contain, and the accuracy of their careful researches into the details of half-forgotten localities. The first book traces lightly the thread of the political history of Manhattan, touching upon the names of those English Governors who were the pensioned minions of royalty, and, so far as the age permitted, as wicked as any Roman proconsuls, and giving due praise to such Governors as the Dutch Stuyvesant and English Burnet, who labored honestly for the welfare of the province. Certain picturesque passages in the social life of earliest New York are dwelt upon, as the Leisler episode, the negro plot, and Kidd's piracy, without any discussion of the doubts that even at this day obscure their details. The reader is left to decide, aided by John Fiske's impartial comments, whether Kidd's crimes sought official accomplices, or Leisler suffered judicial murder.

The other volume concerns itself more with topography than with personalities, showing how the crooked byways and cowpaths of Old Amsterdam lengthened and widened and straightened themselves into the stately avenues now none too ample for the commerce and luxurious abodes of the island we live in. A neat diagram prefixed to each chapter conducts the reader through these changes.

Both these books do much to clear up a vagueness which for most people hangs over the steps in New York's growth, and both might deserve, from their solid information and clear precision, to serve as a basis for manuals for the use of schools in the subjects of which they treat.

The Brook Book: A First Acquaintance with the Brook and its Inhabitants through the Changing Year. By Mary Rogers Miller. Doubleday, Page & Co.

This is a series of pastoral idylls, which lack but a very little of being entirely charming. The author, who is "lecturer on nature study at Cornell University," is a true lover of woods and streams, and a trained and excellent observer of the different forms of life they nourish and maintain. No one at all apt in deciphering the half-hidden sights through which Nature reveals her secrets, or even such as may want to learn how to recognize them when seen, can fail to be impressed with the knowledge the author has of her subject, and her generally delightful and accurate way of imparting it. The varied aspects of the Brook, during the different months of the year, and of the woods and meadows in western New York through which it flows, furnish the frames which Miss Miller fills with vivid details of animal and vegetable life, full of interest even to those who knew most of them before, and of information about common things useful to every reader. The titles of the chapters give such imperfect hints of their contents that it will serve no purpose to mention more than one or two of them. Those on Dragon-flies and May-flies, relating the history of the various transformations and habits of these common insects, are so well done, and have so much other matter of interest which fits in naturally with the story, that they retain the attention of the reader through every line. There are other chapters which, in the style and power of appreciative description of natural life and scenery, recall strongly the tone of Dr. van Dyke in many of the best parts of his 'Little Rivers.'

One must not, however, in spite of the general and great excellences of the book, be blind to certain faults which mar parts of it. One of these is a tendency to "gush" that occasionally breaks forth: *e. g.*, on page 5, a really fine description of some strawberry plants in bloom concludes thus, "Their beauty fairly hurt." There are some rather tedious details of æsthetic impressions and purely personal experiences connected largely with dress, and many of the chapters contain matter they would be better without; these slight imperfections being the more apparent from the goodness of what attends them.

The illustrations are numerous, appropriate, and altogether delightful. They consist of engravings and half-tone reproductions of photographs. The latter are conspicuous for the beautiful natural scenes they portray and for their uniform and unusual excellence.

Meditations of an Autograph Collector. By Adrian H. Joline. Harper & Brothers. 1902.

Man is naturally a collecting animal. Some lower vertebrates, as the magpie, the raven, and the Australian bower-bird, have what to the superficial observer seems much the same habit; but there is an important difference: they accumulate, he collects. They gather useless things of many kinds; he as many as possible of one kind. Nothing so insignificant, nothing so hard to get, but may become the object of ardent pursuit: a queen, according to one author, collected a museum of button-holes, and a millionaire, according to another, made a collection of echoes. Collecting, if a weakness, is on all hands admitted to be an eminently respectable weakness; and if Europe would only look upon the Sultan as a collector, whose hobby is Circassian damsels, the Eastern question would pass into a milder phase.

As to the rationality of his hobby, the collector of autographs stands high. Earle's "Antiquary," who "would give all the Bookes in his Study for sixe lines of Tully in his owne hand," was not altogether an ass. No one can be insensible to the interest that attaches to the handwriting of an illustrious man; nor lives there among English-speaking men one with soul so dead that it would not thrill at the discovery of an autograph of Shakspere.

One does not need to be a collector to find pleasure and entertainment in the book whose title is given above. In it the amiable author lays his choicest treasures before us, and chats familiarly about them and the writers, about the joys and sorrows of autograph collectors, interspersing the whole with anecdotes. The volume is illustrated with facsimiles and portraits, and has for frontispiece a full-length of Lamb, "scratched on copper from life," in which full justice is done to the exiguity of his legs, and perhaps more than justice to the prominence of his nose. On p. 250 the author says that he cannot understand the question, "Who is to be Prince George of Denmark?"—in a letter of Lockhart's, written in 1837. Of course it means, Who is to be the husband of the young Queen Victoria?—who had just succeeded to the throne.

Histoire de la Littérature Juive, d'après G. Karpelès. Par Isaac Bloch et Émile Lévy. Paris: Ernest Leroux. 1901.

The study of the literature of the Jews in its place among the other literatures of the world is fairly with us. When comparative literature arose, this particular aspect could not fail to assert itself, and so for the last fifty years there has been a vague recognition that many of the most puzzling problems of European letters and folklore might be helped far on their way by taking the Jews into account. But while phrases like "Jewish influence," "the Jews as transmitters," etc., have had in historical strife the blessedness of Mesopotamia, they have also had, for all but a very elect circle, its emptiness of meaning. Jewish literature has been treated hitherto either on a scale and in ways which made it intelligible to the Semitic specialist only, or in sketches which had no value save Mesopotamian and provocatory.

The present book strikes a more happy *via media*. It is of some extent—624 pages of text and 60 of indices; but it is also readable and self-explanatory. It has the French lightness of touch which can conceal a *Gründlichkeit* deep as that of any German. Its plan and breadth of sweep also are of the broadest. It takes within its arms all Jewish literature, regardless of language or country, form or substance, and traces the different periods of florescence from Old Testament times to the present day. The periods, indeed, are different and many. If the Jews have not produced many writers of the highest genius, they have shown in letters, as in everything else, an inexplicable power of recuperation and a persistent reassertion of their national genius. The story of it all is given here with considerable wealth of detail, and it will probably be a revelation to most. The book of Karpelès which this is *après*, has been treated very freely, abridged, recast, supplemented, and rearranged. The divisions into sections and chapters, on which in such a work so much depends, are happy and clear. The periods and intervals stand out. Regrettable is the strangely archaic tone in treating the Old Testament scriptures. A word is thrown in for the unity of the Pentateuch, the Solomonic authorship of the "Song of Songs" and "Ecclesiastes," and for the historicity

of the Great Synagogue. Nor is the literary perception at this point always certain. The "Book of Proverbs" and "Ecclesiastes" can hardly be reckoned as poetry, even didactic poetry—if such a thing there be. In treating the later literature, the eyes of the writers are not so closely holden. Regrettable, too, is the lack of references, with clues to further information. Even the specialist will find here and there in these pages notices the source and basis of which he would gladly know. But the book in general is excellent, and the indices especially cannot be too highly praised.

BOOKS OF THE WEEK.

A Fool's Errand, by One of the Fools. Fords, Howard & Hulbert.
Altsheler, J. A. My Captive. D. Appleton & Co. $1.25
Balch, E. S. Antarctica. Philadelphia: Published by the Author.
Cox, Mrs. J. F. Home Thoughts (Second Series). A. S. Barnes & Co. $1.20.
Davidson, Marie A. The Two Renwicks. F. Tennyson Neely.
Foster-Melliar, A. The Book of the Rose. New ed. Macmillan. $1.75.
Headlam, Cecil. Peter Vischer. (Handbooks of the Great Craftsmen.) London: George Bell & Sons; New York: Macmillan. $2.
Josselyn, Charles. The True Napoleon. R. H. Russell.
Lyall, Edna. The Hinderers. Longmans, Green & Co. $1.
Marsh, G. C. A Singular Will. F. Tennyson Neely.
Rives, Hallie E. Hearts Courageous. Indianapolis: The Bowen-Merrill Co.
Shaw, E. R. School Hygiene. (Georgia Edition.) Macmillan. $1.

A History of the Peninsular War

By C. Oman, M.A. In six volumes, with Portraits and Maps. Cloth. Vol. I. $4.75.
For sale by all Booksellers.
OXFORD UNIVERSITY PRESS: (AMERICAN BRANCH)
91 and 93 Fifth Avenue, New York.

A New Omar Khayyam
INDIA'S LOVE LYRICS

Collected and Arranged by Laurence Hope. Decorated cover. 12mo. $1 50 *net.*
The London Athenæum:
"Mr. Hope has caught admirably the dominant notes of this Indian love poetry, its delirious absorption in the instant, its out-of-door air, its melancholy. Slender brown limbs stir silently in the garden where flying foxes cross the moon. And always there is the poignant sense of the fleetness of love—a moment's salvage from the flux of time."

MAINE.

FOR SALE.—The finest large shore tract in this section left unoccupied and for sale at prices of ten years ago. The property comprises 400 acres of land, with nearly four miles of shore front; has beautiful headlands, cliffs, coves, and beaches. The land is much diversified in character, alternating between heavy woodland and open fields. There is a great variety of beautiful drives through and around the tract. Steamboat landing, with daily communication with Boston, near the property. Most exquisite views of bay, ocean, islands, and mountains everywhere. Islesboro and Castine are within five miles of the land. There are two farmhouses and a pond on the property, and several salmon privileges on the shore. Address

IMPORTANT ANNOUNCEMENT

TO BE PUBLISHED THIS FALL

History of the Expedition of Captains Lewis and Clark

1804-5-6

NOTWITHSTANDING that in America few names are more familiar upon the tongue than Lewis and Clark, it is a singular fact that at the present moment a full and adequate account of what they did is almost unattainable. The complete journals of the explorers are still in manuscript. The published work of 1814, abridged and adapted from the journals by the accomplished Nicholas Biddle (though the name of another appears on the title-page as editor), has long been out of print. The fragmentary accounts that preceded the Biddle edition have become very rare, as also the various foreign presentments, English, Dutch, German, and French. The noble reprint of the Biddle edition which appeared in 1893, prefaced, annotated, and supplemented in every needful way by Dr. Elliott Coues, a work of great bulk and cost, has quite disappeared from the market. At the present moment whoever desires to own the story of Lewis and Clark must content himself with abridged compendia or unsatisfactory reprints, or pay high for copies, usually tattered and mildewed, in auction rooms and the stores of dealers in old books.

The lack thus existing, felt now more and more as the centenary of the great exploration draws near, Messrs. A. C. McClurg & Co. propose to make good. In the early Fall of 1902, there will appear over their imprint a beautifully printed edition of the Travels in handy form, at a popular price, which will be planned to fill all the requirements of libraries and private buyers, and thus become the standard edition of this great American classic. The text will be that of the Biddle edition, which must hold its place as the only account approaching adequacy.

This new edition, then, will be a reprint of the Biddle text of 1814 complete. Its bulk will not be increased by annotation, but it will be carefully supervised by Dr. James K. Hosmer, Librarian of the Minneapolis Public Library, a well-known specialist in matters pertaining to Western history, the author of "A Short History of the Mississippi Valley" and "A History of the Louisiana Purchase." Dr. Hosmer will prepare a careful analytic Index, a feature which the original edition lacked, and furnish an Introduction giving the events which led up to the great expedition, and the vast development that has flowed from it, in a way to make plain the profound significance of the achievement. Fac-similes of all the maps of the 1814 edition will be given, together with the best extant portraits of the heroes of the enterprise.

The edition will be in two square octavo volumes of over 500 pages each, printed from a new font of pica old style type, on an extra quality soft laid paper, with uncut edges.

In Two Volumes, with Portraits and Maps, $5.00 net.

The Most Important Whist Book in Many Years

THE PRINCIPLES AND PRACTICE OF WHIST

By LENNARD LEIGH and ERNEST BERGHOLT.

With EXAMPLES, ILLUSTRATIVE DEALS, CRITICAL ENDINGS, MATHEMATICAL CALCULATIONS, TABLES OF PROBABILITIES, etc., etc., including an Essay on PROBABILITIES, by WILLIAM H. WHITFELD, M.A. Cantab.

"The book is admirably planned for the student. It is a very important and valuable addition to whist literature."—FISHER AMES, author of "A Practical Guide for Whist."

"A better guide for the learner or book of reference for the expert could hardly be devised."—CHARLES E. COFFIN, author of "Gist of Whist."

"I believe it will be of great benefit to whist players and to the game of whist."—The late GEN. A. W. DRAYSON, author of "The Art of Practical Whist," after seeing MS.

"Precisely what was required by the whist world to bring the grand old game into thoroughly healthy grooves."—COLONEL B. LOWSLEY, author of "Whist of the Future."

"You have produced a work on whist which will prove serviceable both to the beginner and to the advanced player."—N. B. TRIST, author of "Whist."

"An exceedingly valuable addition to whist literature."—WILLIAM S. FENOLLOSA.

"It is the best work on the game ever issued in this country, and for completeness in giving everything a whist student could require is the most satisfactory and best gotten up work ever offered to the public."—ELLWOOD T. BAKER

"I have no hesitation in pronouncing the book the soundest, most thorough and convincing exposition of basic whist principles that has ever been written."—W. A. POTTER, Whist editor of Providence Journal.

"No book on the game has ever been praised so generally and so highly. We strongly recommend it to all whist players; the poor players will be instructed, the good ones will profit by it, and the experts will find it a never ending source of enjoyment."—W. H. SAMSON in the Rochester Post Express.

Crown 8vo. Cloth, extra gilt top. Net, $1.50; by mail, $1.68

"As dainty, as finished, and as beautiful as a miniature."

THE WESTCOTES

By A. T. QUILLER-COUCH

Illustrated by J. L. GEROME FERRIS.

12mo. Cloth. $1.00

THE WESTCOTES has been running as a serial simultaneously in "The Era" in this country and "Blackwood's Magazine" in England. The London "Spectator" and "The Speaker" both give it high praise. It is a charming tale, with all Mr. Quiller-Couch's delicacy of touch and high literary quality.

"It is very rare to come across a book which so fully satisfies the demands of the fastidious reader."—London *Bookman.*

"Admirably written romance."—London *Spectator.*

"There is a charming old-world courtesy about this book, a faint and rare fragrance emanating from it, a mellow, a fine tone sounding through it."—*The Academy*, London.

"A delightful story, told in his usual felicitous style."—Chicago *Journal.*

"A sweet and tranquil idyll, fluttered, but not overwhelmed by genuine passion."—N. Y. *Tribune.*

"Treated with infinite delicacy."—London *Saturday Review.*

"It has quite as much literary distinction of manner as any of its author's books."—*The Outlook*, N. Y.

"The book shows that the author has progressed in his art to a position warranting a belief in his permanence."—N. Y. *Times Saturday Review.*

"A tale of rare delicacy and feeling."—Detroit *Free Press.*

HENRY T. COATES & CO., Publishers, Philadelphia.

LONGMANS, GREEN, & CO.'S NEW BOOKS

The Path to Rome

By HILAIRE BELLOC, Author of "The Life of Danton," "Robespierre," etc. With 80 illustrations from Drawings by the Author. Crown 8vo, 464 pages, gilt top, $2.00 net. By mail, $2.20.

*** The author herein describes a walk of 600 miles taken last summer from the town in Lorraine, where he was once in garrison, to Rome, illustrating in some eighty sketches the scenes through which he passed. The book is not only a description of his journey, but contains also a number of such anecdotes and stories as occur to him, or are suggested by his adventures.

The German Empire of To-day

Outlines of Its Formation and Development

By "VERITAS." With Map. Crown 8vo, pp. x-340, $2.25.

*** This book deals in broad outline with the formation of the present empire up to 1871, and with its subsequent development up to 1900. The object of the author is to place before the British public reliable information on such subjects as the Army, Navy, Commercial and Colonial Policy, Colonial Possessions, National Education, and German Finances.

Tommy Cornstalk

Being Some Account of the Less Notable Features of the South African War from the Point of View of the Australian Ranks.

By J. H. M. ABBOTT, late Corporal, 1st Australian Horse. Crown 8vo, pp. xii.-264, $2.00.

"A more valuable book on the war has not yet been written, nor one more vivid, nor one more interesting."—*Daily Graphic.*

NEW STORY BY EDNA LYALL.

The Hinderers

A Tale of the Present Time

By Edna Lyall, author of "Donovan," "We Two," "In Spite of All," etc. Crown 8vo, $1.00.

*** The story opens on the day of Queen Victoria's death and closes in January of the present year. It deals with the subject of Peace and War, and gives the experiences of a heroine who is suddenly transported from a quiet home in the tropics to "Smart Society" in England.

The Foundations of Belief

Being Notes Introductory to the Study of Theology.

By the Right Hon. ARTHUR J. BALFOUR. *Eighth Edition Revised.* With a New Introduction (28 pp.) and Summary (21 pp.). Crown 8vo, $2.00 *net.* By mail, $2.15.

Color Problems

A Practical Manual for the Lay Student of Color

By EMILY NOYES VANDERPOEL. With 117 Plates in color. 8vo, $5.00 *net.* By mail, $5.22.

"A better understanding of color would be of great value to decorators, designers, lithographers, florists, women, in their dress and home decoration, and many others. For such to combine the essential results of the scientific and artistic study of color in a concise, practical manual, and to classify the study of color in individual eyes, in light, in history, and in nature, has been the aim of the author of this book. Also as color cannot be fully appreciated by any written description, the text has been made as brief as possible, the plates full and elaborate."—From Author's Preface.

LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York

The Nation.

NEW YORK, THURSDAY, JUNE 12, 1902.

The Week.

In substituting its own bill for the Senate measure for protecting the President and punishing anarchists, the House has been well advised. The terms of the Senate bill are less carefully guarded, from a legal point of view, than those of the House; and the proposal to make even an attempt upon the life of the President punishable with death is one to which American penal laws will probably not long, if ever, give place. As a deterrent it would be, from the nature of the case, valueless. So would be the provisions against the immigration and naturalization of anarchists, which are contained, to nearly the same effect, in both bills. The Senate bill, however, takes the palm for absurdity in the clause providing a bodyguard for the President, consisting of a detail from the regular army. This would be exceedingly distasteful to any conceivable President; most of all, one would say, to Mr. Roosevelt. Certainly, it would take an active and well-mounted bodyguard to attend him. "They'll have fleet steeds that follow," he would say, Lochinvar-like, as he set off for his daily cross-country. The House very properly refused to agree to anything like a Swiss Guard at the White House.

The conclusion of the debate on the Philippine bill in the Senate was darkened by a tale of torture quite as horrible as the acts of Major Waller and the orders of "Hell-Roaring Jake." Just before the vote was to be taken on the bill, Senator Culberson said that he had been trying to secure the passage of a resolution calling for copies of charges preferred by Private Andrew K. Weir of the Fourth Cavalry against Lieut. Arnold and Sergeant Edwards of that regiment, but that action on the resolution had been deferred from day to day, at the instance of Senators Spooner and Lodge, who desired to know first whether a court-martial had been ordered in the case. Mr. Culberson had got tired waiting for other Senators to satisfy their private curiosity, and accordingly had procured for himself a copy of the charges of Private Weir, and also a copy of a report made thereon by Capt. P. W. West of the Fifth Cavalry as Inspector-General of the Department of Northern Luzon. These papers he sent to the Secretary's desk to be read. Before they were read Senator Lodge desired to know how they came into Senator Culberson's possession, but was not enlightened.

Capt. West's report was dated August 27, 1901. The question naturally arises, Where has this report been kept during the past ten months? After the reading had been concluded, Senator Beveridge desired to know where Senator Culberson had obtained it. The latter declined to gratify his curiosity. Then Mr. Beveridge asked the frank question whether these two papers had been obtained, either directly or indirectly, from Gen. Miles. As Senator Culberson made no answer, Beveridge added, "That is all," conveying the idea that the culprit had been discovered at last. And it seems to be the prevailing notion in high quarters that the first thing to be done is to punish the Commanding General of the Army if it shall be found that he divulged these shocking facts. The men who practised these horrible atrocities may or may not be punished; the man or men who concealed the facts will certainly not be punished; but if it can be shown that Gen. Miles either gave out or connived at giving out this damning report, then we may see discipline exercised upon him at all events.

The charges of Private Weir were embraced in a letter dated April 10, 1901, and addressed to the writer's uncle (name not given). It began by saying that the writer thought that the army had been sent to the Philippines to represent law and civilization, and he wanted to know whether the Constitution of the United States and international law did not prohibit torture. He said that he had been an unwilling witness to torture inflicted by an officer on captured insurgents, and that he told this officer that, if he did not stop it, he should report him to higher authority; that the officer replied that he would stop it, for which reason he (Weir) did not report the facts that he had witnessed. But he had learned that the officer had not kept his promise, but "was doing the same or even worse every day." He then proceeded to tell what he had witnessed. A prisoner was captured, from whom the officer (Lieut. Arnold) desired to obtain information. So he told Sergeant Edwards to take the man and get what information he could out of him. Edwards took the man and asked him what he knew. The man replied that he had no information to give. So Edwards caused him to be stripped naked, and laid on his back. Then the "water cure" was administered to him, and while he was undergoing this, he was whipped and beaten unmercifully. He was then stood up and "asked to confess." As he did not do so, he was beaten and clubbed again, and strung up by the thumbs, and, while so held up, was beaten again. As this treatment was ineffective, the man was strung up by the neck. At this point, Private Weir went to Lieut. Arnold and told him what Edwards was doing, and remonstrated against such practices. Arnold became very angry, and threatened him with court-martial for insubordination. He said: "When I give a man to Sergeant Edwards, I want information; I do not know how he gets it, but he gets it any way." He said that "these people," meaning the Filipinos, "should not be treated as human beings." Mr. Weir told of other cases of torture inflicted by Arnold, even worse than the one here described, but these other cases had not been personally witnessed by Weir. The charges against Arnold were inquired into by Capt. West, whose report concluded with the words: "I believe that a thorough investigation into this matter will substantiate the charges made by Private Weir."

The growth of Imperialist opinion on the water cure is practically complete with the testimony of Major Glenn before the court-martial which is trying him on charges of cruelty to the natives. Major Glenn declares that the notorious "water cure," to which he had submitted himself for experimental purposes, is by no means painful, and only slightly uncomfortable. The criticism that it has received is therefore unwarranted. Thus is a torture described in the old histories of the Inquisition reduced to a humane expedient for getting information. To this complexion are its apologists come. There was a time, not a year ago, when the fact that a native torture was being employed by Americans in the Philippines was indignantly denied. Next, in the face of overwhelming evidence, it was admitted that sporadic instances of torture had occurred under circumstances of extreme provocation. So far no one doubted that to undergo this "cure" was an awful experience, and it was only the other day, though the correspondent of a society paper had given some hint of this view, that the innocuous and possibly beneficent effect of having some gallons of water poured into one was fully set forth by Major Glenn. Thus a fact once denied, then grudgingly admitted, is at last explained away. But is it, until we know first how far Major Glenn is correctly reported, and next how crucial was his experiment of the cure? The German spas recognize cures and half-cures. Did Major Glenn's physician hold his pulse so that the water might be administered until the heart was on the point of stopping from the pressure of the distended stomach? Did Major Glenn try dirty water, which in one of the recent trials was recommended as efficacious where clean water had

failed? These are some of the things one would wish to know before adopting the water cure as a harmless and hygienic recreation. One must hope that Major Glenn has been misreported, for the army at least should be free from the cant of the "benevolent assimilators."

We are in receipt of a pathetic appeal from brothers of the press in Manila. The editors and proprietors of the Manila *Freedom*—so named, we believe, from its policy of making free with all the good things in the Philippines—inform us that they have been arrested by the Philippine Commission for "scurrilous libel and sedition," and that "the liberty of the press in these islands" is endangered. It seems that *Freedom* accused the Commissioners of various rather vague offences, such as appointing Filipino rascals to office instead of Americans down on their luck, of having "press agents" to place Government "advertising patronage" where it would do the most good—not in *Freedom*, we'll be bound—and, in general, undertaking "too much work." Simply for this the arrests followed, and the alarmed editors ask the press of the United States to come to their rescue. For our part, we must decline. These newspaper gentlemen are merely getting a useful experience of what military government is. They were perfectly willing and even anxious to have its severities fall upon 10,000,000 natives, and now they are offered a taste of it themselves. In this we see rather a case of poetic justice than of outrage, and as for "liberty" in the Philippines, it remains just where it was—namely, in the hand of the General commanding.

Before our benevolent assimilators leave off rejoicing over the strength of "Expansionist sentiment" on the Pacific Coast, they should note the language in which that sentiment is locally expressed. The Portland *Oregonian*, for example, frankly said on the eve of the election that the "policy of National Expansion" was simply one of "business sense," with an eye to the "great gain" which was to be had from the "exploitation of the lands of the Pacific." But this is nothing compared with the San Francisco *Argonaut*. That truly Imperialistic newspaper feels that "the talk about benevolent assimilation is insufferable cant," and lays down the true doctrine of Expansion as follows:

> "We do not want the Filipinos. We want the Philippines. The islands are enormously rich. But, unfortunately, they are *infested by Filipinos*. There are many millions of them there, and *it is to be feared that their extinction will be slow*. . . . The development of the islands cannot be successfully done while the Filipinos are there. *Therefore the more of them killed the better.*"

We like such frankness, and could wish there were more of it. The *Argonaut* is to be commended for "stripping," as it says, "all hypocritical verbiage from national declarations." It is aware that "certain excellent gentlemen now in Congress" would repudiate its sentiments as "brutal." But its retort is unanswerable: "*We are only saying what they are doing.*"

Custom requires that the Democratic State Convention held midway in a Presidential term shall "reaffirm" the National platform upon which the party had made its campaign two years before. Thus, the Indiana Convention of 1898 declared that "we reaffirm and emphasize the platform adopted by the National Democratic Convention of 1896 at Chicago," and also that "we express our undiminished confidence in William Jennings Bryan, our peerless leader in the National campaign of 1896." The Bryanites at Indianapolis last week therefore had on their side the argument that to "reaffirm" the Kansas City platform of 1900 would be the natural thing, and that a refusal to do so would be interpreted as a rebuke to Bryan. The opponents of Bryan accepted this issue and carried the day, forcing the adoption of a set of resolutions which contain no reference whatever to either the platform or the candidate of the last National Convention. In other words, the party wipes the slate clean and takes a fresh start. The platform adopted is noteworthy for the ingenious device by which the old silver issue is discarded. The Convention at the corresponding time in 1898 declared that "we are in favor of the free and unlimited coinage of both gold and silver at the existing ratio of 16 to 1, without the aid or consent of any other nation." This year's platform "recognizes as an economic fact the increase of standard money, arising from the vastly increased production of gold from our own and foreign mines, as a demonstration of the truth of the quantitative theory of money," and says not a word about silver.

The plank on the tariff issue is brief, but it packs the whole logic of the situation in this compact statement: "We denounce the Dingley Tariff Law as the breeder of Trusts, and demand that tariff duties shall be levied for the purpose of revenue only, and limited by the needs of the Government, honestly and economically administered." Clear and definite also is the declaration of principles regarding the Philippines. After condemning the policy of the Republican Administration as having "embroiled the republic in an unnecessary war, sacrified the lives of many of its noblest sons, and placed the United States, previously known and applauded throughout the world as the champion of freedom, in the false and unAmerican position of crushing with military force the efforts of our former allies to achieve liberty and self-government," the resolution on this subject proceeds:

> "The Filipinos cannot be citizens without endangering our civilization; they cannot be subjects without imperilling our form of government; and, as we are not willing to surrender our civilization to convert the republic into an empire, we favor an immediate declaration of the nation's purpose to assist the Filipinos to establish for themselves an independent government, protecting them from outside interference, and securing to this country such commercial and naval rights and advantages as would be just and fully and fairly protect American interests."

Texas has been a stronghold of Bryanism and silverism, and it is therefore significant that the Democratic Congressional convention in the Fifth District of that State was as silent about both as the Democratic convention in Indiana. It seems to have been a representative body, and its platform lays chief stress upon the question of the tariff and Imperialism. "We denounce the Dingley Tariff Law as the breeder of Trusts," it says, "and demand that tariff duties shall be levied for the purposes of revenue only, and limited to the needs of the Government honestly and economically administered." The Philippine policy of the present Administration is denounced, and what is favored in its stead is set forth in the identical phraseology of the Indiana platform above quoted. Finally, these Texas Democrats declare that "we believe that the question of Imperialism and the Trust-breeding tariff should be the paramount issues in the next national campaign."

There is no place where small favors are more gratefully received than at the New York Custom-house, and Secretary Shaw has deserved well of everybody by facilitating the delivery of express parcels and liberalizing the system of making individual payments at the customs. The plan is a very simple one. The express companies keep at the Sub-Treasury a daily deposit large enough to cover all possible duties on the consignments of that day. The Collector simply draws upon this deposit the amount of the duty as soon as it has been properly assessed. The express companies may also act as agents for individuals. Thus it is possible for an incoming tourist to turn over his baggage to an express company immediately after the examination. This saves considerable delay at a time when delay is particularly vexatious, and will undoubtedly be a more satisfactory arrangement than can be made with a Custom-house broker. The saving of time on express packages is expected to be eight or ten days. Secretary Shaw again deserves credit for removing obstacles to traffic which have grown up in the customs service, and especially

for doing everything in his power to make the first landing of a guest or the return of a native something less than a punishment for foreign birth or absenteeism.

For the first time in its century and a half of existence, Princeton chooses a layman for its President. This marks the final step in that secularization of the American college of which Prof. A. B. Hart writes in the *Harvard Graduates' Magazine* for June: "Whatever might be thought on that subject by the President of Bowdoin, or Dartmouth, or Amherst, or Wesleyan, or Chicago, there is no doubt that the layman is now preferred for such appointments; nor that the dominie has ceased to be the typical teacher and guide of academic youth. . . . The community of college graduates, and their associates throughout the country, seem convinced that the educational side of a university is best cared for by the trained educator." Every word of that description might be applied to the President-elect of Princeton University, and it might be added that, besides the catholic sympathies and knowledge of affairs which are implied in the title "educator," he bears a high reputation as a brilliant investigator of problems of politics and government, and holds an honorable position in American letters as a judicious essayist. It is very rarely the case that the candidate for a university presidency can show so complete and convincing a register of qualifications, and it was this obvious fitness of Dr. Woodrow Wilson which made it possible for an old president to step out and for a new one to be appointed the same day—a case unparalleled in recent times—without so much as causing a proper feeling of surprise. President Patton's resignation was also of an unusual kind. Leaving in the full vigor of middle life, with health and popularity unimpaired, he resigns a charge which he has administered with indubitable success, because he feels the call of his old studies, and because he realizes that a man of different training may more advantageously utilize the prosperity which he has done so much to procure.

Manitoba and the Canadian Northwest are repeating with great rapidity the history of the winning of our West. The problem of absorbing the Galicians, Russians, and other refractory races is specifically Canadian, but the remarkable influx of American settlers in these regions must affect both Canada and ourselves. As yet we have no accurate statistics of this agrarian invasion, but some idea of its significance may be gained from the following figures. In the years 1899-1901 the total immigration from America to Canada was, respectively, 11,945, 15,500, and 17,987. By June 1 of the present year the Great Northern Railroad alone had carried 25,000 immigrants into Manitoba. While some of these were taken directly from the incoming steamers, many were either American-born or thoroughly Americanized. This cannot continue without producing its effect upon the relations of the two countries. The United States cannot wholly repudiate her children who have taken up Canadian farms and accepted Canadian citizenship. A constant social interchange and common agricultural interests in the Northwest will more and more reduce the boundary to its definition as an "imaginary line." The palpable "Chinese wall" now absurdly maintained between Canada and this country will never seem quite so absurd as it does where it prevents John Smith of North Dakota from selling surplus produce to or buying it from John Smith, jr., of Manitoba.

The reported combination of several British steamship companies, including the Cunard, Allan, Castle, and Elder-Dempster Lines, has the similitude of truth. The law of self-preservation requires the companies not included in the Morgan combination to take common action, since it would be possible for the combination to coerce them one by one, as it did perhaps coerce the German lines. Naturally, the outside concerns think that they must hang together, unless they would hang separately. The question of most importance to them is whether they can secure railway connections on this side of the water to offset a possible combination of the East and West trunk lines in the United States with the steamship consolidation. If the shipping syndicate should be able to offer a preferential rate from the Western grain fields to English ports which the other steamships could not match, the latter would be at the mercy of the former. Hence we are not surprised to hear that the Cunard Company and its allies are looking to the Canadian Pacific Railway as a resource in the event of an adverse railway combination. The Canadian Pacific could tap the wheat-fields of the Red River valley, and even if it did not itself carry much wheat to the seaboard, it could put a strong curb on the competing American lines. There is talk also of a British Government subsidy to the opposition line; but such a thing is most unlikely. The two combinations, if there are two, must work out their problems for the present without Government interference. Meanwhile a new factor will appear upon the scene before long. The private shipping that has been employed in connection with the Boer war, estimated at two million tons, will presently be released, and will be looking for freights elsewhere. It will find employment partly in the North Atlantic, and its influence in the coming struggle will be not inconsiderable.

The new British Ambassador, the Hon. Michael Herbert, is comparatively unknown beyond the British Foreign Office. So was Lord Pauncefote at the time of his appointment to Washington. One may assume that, like his predecessor, the new Ambassador will be a working, not a talking diplomat, seeking to win confidence rather than the reputation for brilliancy. His training is of the most thoroughgoing, and he comes with the prestige of long service in the most highly organized diplomatic corps of our day. This training produces men of the office rather than men of the platform. In fact, no other diplomatic service than our own could permit itself such a succession of salient personalities as the American representatives at the Court of St. James. Lowell, Phelps, Bayard, Hay, and Choate were free to do an amount of speechmaking that would have infallibly terminated the career of a European diplomat. We believe—where our selections have been carefully made, as for England—it has been a fortunate dispensation that has given us not diplomats, but engaging excursionists in diplomacy; since the expansiveness that our Ministers at London now are required to maintain has generally brought them a sound personal popularity which has been more valuable than the treaties they have negotiated.

The difficulties attending the abolition of sugar bounties in Germany have culminated in a project to make the sugar industry a Government monopoly. There are other state monopolies in the Old World. Tobacco and friction matches, for example, are monopolies in France, and Bismarck tried in vain to create a tobacco monopoly in Germany. These, however, are monopolies for public revenue. They are not assumed by the Government to enable individuals to dispose of a losing business. Such would seem to be the aim of the proposed Government sugar monopoly. The export bounty on German sugar is of two kinds. It consists, in part, of the excess of rebate paid by the Treasury over the internal tax collected on the beet roots, and in part of the cartel, which enables the sugar manufacturers to charge higher prices to buyers for domestic consumption than to exporters. This is made possible by the tariff on sugar of foreign production. The abolition of all bounties on exports has been decreed by the Brussels Convention, to take effect in the autumn of 1903. What to do with the property nursed into life by this hot-house treatment is a puzzle on all hands. Apparently, the owners have conceived the plan of unloading it upon the taxpayers, and very likely they will succeed.

OVERLOADING THE PRESIDENT.

The ill-advised attempt to induce President Roosevelt to intervene in the coal strike was but the latest of many recent symptoms of an unhappy political tendency: we mean the resort to the President in every time of trouble. Whether the difficulty be industrial or political, regional or national, small or great, we run with it to the White House in childlike confidence, or else in weak dependence. We are coming to think of the Chief Executive as if he combined in himself the attributes of an Oriental King and a mediæval monarch—as if he were a Solomon to decide all our controversies, and a Louis to decree righteous judgment from a "bed of justice."

Congress inclines more and more to call upon the President to cut its Gordian knots for it. Is it a question of wisely choosing the route for an Isthmian canal? Senator Hoar introduces a bill to leave the matter wholly to the President. Do legislators find it a hard task to draw a bill for reciprocity with Cuba in such a way as to cut off the Sugar Trust from all benefit? Senator Spooner would refer it to the President. Let *him* execute a law which it passes the wit of the Senate to frame. Or is the rebate plan to be adopted, and is the objection made that the money voted might not go to deserving Cubans? Put it all in the President's hands, urges Senator Burrows; *he* will see to it that our dole reaches only the right persons. Allah is great, and the President is his prophet!

We consider this increasing willingness limply to lean upon the President as most mistaken and perverse. It is bad for him, and bad for us. It injures his office, while changing it and impairing its true efficiency; and, on the other hand, it cuts the nerve of self-help and initiative among the people, and enables Congress to dodge and shift where it should debate and decide. The Presidency is already overburdened. If the strain of responsibilty which it imposes was so great in Jefferson's day that he cried out at the "splendid misery" of his office, what would he say to the daily besetment and besieging of our later dwellers in the White House? In mercy to our chosen chief we should spare him these added cares. Besides the danger of breaking him down physically, we expose him to the more serious danger of a day so devastated by intruders and a night so spent in consultations that he has no time to think, no leisure to clarify his mind, and form his convictions, in the larger matters of national policy to which his best strength ought to be given. Burke warned us that "they who always labor can have no true judgment"; and our growing habit of invading the White House on every occasion and with all possible forms of business, tends directly to degrade our Presidents to the level of his men who "exhaust their attention, burn out their candles, and are left in the dark."

What alarm this magnifying of the President would have struck to the hearts of the framers of our Constitution, need not be said. They lived in the remembrance and shadow of the time when the people's representatives resolved that "the influence of the Crown has increased, is increasing, and ought to be diminished." To them, our present-day adulation of the President, and turning over to him of power after power of the state, would have seemed the entering upon a path at the end of which is the figure of a "man on horseback." Frankly, we do not now fear that traditional shape of dread. What we are afraid of is, not a man on horseback, but a man in his private office dictated to by politicians. They, of course, are really aiming to add to their own power, under pretence of exalting the President's. When they induce Congress to "leave it all to the President," they expect, in their secret hearts, that he will, in turn, leave it all to them. Not tyranny, but corruption, is our most threatening foe; and there is no instrument of corruption like a President wielding the vast and abdicated powers of Congress in a way to suit the schemes of party bosses. The practice got a great impetus under Mr. McKinley. That it has been continued with his successor, shows that the party managers have as yet found no reason to be dissatisfied with their plan of usurping power by ostensibly giving it to another.

By this repeated reference of controverted matters to the President, Congress advertises its own humiliation, and writes itself down as either too lazy or too stupid to do its proper work. What are legislators there for but to legislate? It is the President's business simply to execute the laws which they enact. Is it pretended that he is a fountain of supernatural and unfailing wisdom? Would he, for example, in the choice of a canal route, have a particle of information or expert advice not freely at the service of Congress? Everybody knows that he would not. What he would do, if Congress were to put the responsibility upon him, would simply be to turn to those skilled investigators whose report is before both houses. But if that is the right thing for him to do, why do they not do it? Will they confess themselves either shirks or incompetents? Their proposed action speaks ominously of a deepening disinclination for the serious work of legislation, for that forging of laws in the heat of debate and under the hammer of argument, which has been the glorious tradition of Parliament and Congress. Are we grown so weary of the burdens of liberty that we must make haste to shift them to other shoulders?

Nor can we omit to mention the partisan aspect of the matter. To call upon the President as the *deus ex machina* is, just now, a pretty obvious scheme of the Republican leaders in Congress to get their party out of a scrape. It is torn to pieces over Cuba. It is discordant about the Isthmian Canal. So the managers blandly propose to the Democrats to pass along both questions to the Great Father in the White House. But the Democrats ought to fight the plan, tooth and nail. As it stands, it is a partisan manœuvre. It is designed to free the Republican party from an irksome responsibility, and, at the same time, to give it, through a back-door use of the Presidency, the prestige and advantage which it is not able to win by intelligent legislation in Congress. Let the thing be squarely stated. If the Republican party is not able to make the laws which it has promised and undertaken to pass, and for enacting which it has an ample majority in both houses of Congress, let the disgraceful confession be openly made. To hide behind President Roosevelt's coat-tails the party should be ashamed to attempt, and its opponents should die in their tracks before allowing it.

THE HOUSE PHILIPPINE BILL.

The most important action to be taken by Congress during the remainder of the session will be the disposition of the measures for the civil government of the Philippine Islands. The chief point of difference between the House and Senate bills is that the former provides for an actual beginning of Philippine self-government, while the latter merely continues the present régime of conquest and subjugation. A notable impulse was given on Saturday last to the measure proposed by the House by the publication of a dispatch from Acting Governor Wright, saying that the archipelago is now pacified, and that no reasons exist why civil government should not be established in all the provinces except the Moro country. By the phrase civil government he meant municipal as distinguished from military government in the provinces; but if pacification has been secured, the same reasons which point to withdrawal of military rule are potent for the beginning of representative government on a larger scale. The Senate bill provides for nothing but the taking of a census, and the extension of local municipal government "so far and so fast as communities in such civil divisions are capable, fit, and ready for the same."

The authority of Gov. Taft has been given distinctly in favor of the House bill. In an article written by him and published in the *Outlook* of May 31 he says:

"We of the Commission are very earnest and sincere in our hope that at least the provision for the election of the legislative assembly and of the two delegates con-

tained in the House bill shall be embodied in legislation. We think that the Filipino people would accept this provision as the most indubitable evidence of the desire of the United States that self-government should be given to the people in as large a measure as they are capable of carrying it on."

At the time of writing this article Gov. Taft was aware that certain members of the Senate Committee believed that the organization of a legislative assembly in the Philippines was too radical a step. They believed that men would be chosen as members who would make seditious speeches and stir up fresh strife. Gov. Taft considered this danger wholly imaginary. Even if the Assembly should select Aguinaldo or Mabini or some other insurgent leader to represent it in Washington, he would not consider such action dangerous or undesirable. A representative assembly would give scope for the political aspirations of the people, and would be a great educational school for the better class of Filipinos. Mr. Taft, while differing from President Schurman as to the time when full freedom should be given to the Christian people of the islands, agrees with the latter that the growth of free institutions can be promoted only through their exercise by the people whose destinies we have taken charge of. In short, the two highest authorities we have to guide us in the premises—the first and the second Philippine Commissions—concur in favoring the House bill.

A more important reason for supporting the House bill is the fact that it is in harmony with American principles, or, at all events, not in conflict with them, as the Senate bill certainly is. The latter measure is the same kind of an *impasse* that we have been toiling in from the beginning. It leaves everything undecided. It does not even point the way to anything better than the existing condition. It does not even contain the element of hope. It is a bad education for both Filipinos and Americans. Every day that the present arbitrary government lasts is a bad omen for both sides of the Pacific Ocean. It teaches the lessons of despotism to both the rulers and the ruled, and no one can say to which of the two the injury is the greater. The House bill has the inestimable advantage that it turns our faces once more towards the sun of liberty. This change ought to be most welcome to the Republican party at the present time, when it is about to enter into a campaign rendered doubtful by the exposure of shocking cruelties practised upon a distant people in order to overcome their desire for liberty and independence.

In comparison with the actual beginning of representative government, which the House bill provides for, all other matters are relatively insignificant. Even the proposed establishment of the silver standard in the monetary system of the islands is a secondary consideration. Yet all signs point to a stubborn fight on this question also, and we hope that the House will adhere to its rational plan of assimilating the currency of the islands to that of the United States.

"EDITORIALENE."

This is the name for the editorial writing of commercialized newspapers which is suggested in the striking article in the June *Atlantic Monthly* on "The Newspaper Industry." The writer, who signs himself "Brooke Fisher," is evidently a man who knows at first hand the thing he describes. After tracing the way in which the tyranny of the counting-room has, in too many instances, smothered editorial utterance, he hastens to add:

"Of course there will be the usual quantum of matter that looks like editorials, but on examination it is found to be what might well be patented under the name of editorialene. Editorialene shrewdly selects men of straw to trample upon. It enunciates axiomatic platitudes with a ponderous affectation of wisdom. It 'socks it to the satraps' of a safe distance in the past and a safe geographical remoteness. It also twitters sprightly commonplaces about minor moralities. But you will seek it in vain for direct, courageous, helpful dealing with the burning questions, the political and social and local issues really engrossing the best minds of the community."

We are all painfully familiar with this product of the "business-run press." "Yes," said a college professor, "the editorials of the New York ——— are favorites of mine, since they furnish just what I need—complete mental rest." A witty literary man was asked recently if he was reading the editorial page of another New York paper, setting up to be a model. He said he was not. He had tried to, but found it only a simulacrum of real writing; "and yet," he added thoughtfully, "it has every appearance of being a newspaper, too." It was all "editorialene." We will not multiply illustrations. Anybody in search of them could find an endless store in the treatment of the revelations of the Waller court-martial by the great organs of the American press. First silence, then deprecation, then calling for a suspension of judgment, then terrific arraignment of unnamed "slanderers," then noble tributes to our glorious army—their whole course could have been accurately forecasted by any one familiar with their editorial pages. This power to predict exactly what certain editors will say on given subjects is one of the proofs that their speech is not free. As the *Atlantic* writer says, their writing is of the perfunctory type which any one may foresee, and which a moderately skilled pen could duplicate in advance.

Now this tendency to commercialize the press, which Mr. Fisher depicts in rather sombre colors, is one which has obviously been operative for a long time. Like the parallel commercialization of education and of religion, of which we hear so much, it is largely an incident of our passing from the day of small things to the time of large undertakings. The capital required by a modern daily newspaper is too great to be furnished by one man. Editor and proprietor can no longer, except in rare instances, be united in one personality. A corporation necessarily has control; and, whether it has a soul of its own or not, it is certainly not so anxious to save the souls of others as the editors of an elder day used to be. As primarily a business corporation, its first concern is naturally dividends. Hence has come about inevitably that paralysis of the editorial function, as compared with the money-making function, which the *Atlantic* article describes. It is, in many ways, deplorable, yet it was not wholly preventable.

Is there now any remedy? Is the outlook so dark as Mr. Brooke Fisher represents it? We may put aside at once his preposterous suggestion that the weekly paper will rise in importance as the daily declines in vigor and independence. There is no evidence that the average weekly is any less under orders from the counting-room than is the average daily. In any case, the people will demand the news twice a day, and this puts the weekly hopelessly out of the running as a competitor. With the news in their hands, readers will not wait a week to get an editorial opinion on it. Nor can we expect the owners of newspapers to turn philanthropists, as a class, and pocket losses in order to propagate ideas. Exceptional proprietors have done this, but the newspaper business, as a whole, has to be conducted on business principles; and unless they will justify, in the long run, a fearless and unfettered editorial page, we shall not see it restored.

But it may be hopefully contended that independent and honest editorial writing is more and more coming to seem a good investment for a newspaper. We believe that the counting-room has been far too timid and short-sighted. Colorless newspapers are not good property. In the anxious effort to offend nobody, they disgust everybody. To suppose that the public likes blind flattery and time-serving is to underrate the general intelligence. Happily, there are multiplying instances of newspapers that are highly successful, though entirely independent, and ready at any time to speak their minds freely in the face of party or local prejudice. Their owners have made the fortunate discovery that there is money in courage and ability. It is in the spread of education and of tolerance, and in the power of honest and earnest writing to command respect and appreciation, if not approval, that we see the hope of a press unbribed and unafraid. People will not, in the end, be imposed upon by "editorialene," any more than by repeated newspaper

"fakes." Abraham Hayward heard a cabman under his windows in 1870 rebuke a newsboy for foisting upon him a fraudulent *Echo:* "If you goes on selling me battles as haven't been fought, I'm d—d if I don't kick you." When newspaper-owners are given to understand that such will be the indignant attitude of the public towards insincere or flabby writing on the editorial page, as well as towards invented news in the other columns, they will encourage more than they do now the free expression of well-considered views, and will agree with Thomas Arnold that the times will bear whatever an honest man has to say.

OUR SUPERIORITY IN MANUFACTURING.

A man of large affairs and clear mind, like Mr. James J. Hill, cannot make a public address, as he did before the Illinois Manufacturers' Association at Chicago last week, without uttering a suggestive word. The most instructive thing he said seems to us his quiet but sure pointing to the true reason for American superiority in manufactures. This can be traced, he affirmed, to our "enormous natural resources." It is not the protective tariff which brought about the tremendous growth of our iron and steel industries, but, primarily, the vast deposits of iron ore in Michigan, Minnesota, Wisconsin, and elsewhere. This is in line with what Mr. Carnegie said in London the other day. America must be reckoned with, he told the Englishmen, because she can produce "the cheapest steel." And the reason we can produce it is, in the last analysis, simply that nature has given us the largest and cheapest stores of iron and coal to be found anywhere in the world.

It is well to remind ourselves of this truth, both for reproof and instruction. We hear too much idle boasting on this subject, too many mistaken explanations of our superiority. It is often said, for example, that American machinery is what insures our triumph. But American machinery rapidly finds its way to all countries. It is speedily put at the service of our commercial rivals. There is no export tax on American inventiveness. Indeed, our makers of machinery are among our chief exporters. The dispatches have recently told of the formation of a Pneumatic Tool Company in London, backed by American capital, to introduce the American pneumatic riveter and other labor-saving devices of the kind into British and Continental ship-yards and shops. This process is going on all the time. Mr. Vanderlip has told us of finding the very latest Yankee contrivances in the hands of German workmen. In the nature of the case, it must be so. We are but repaying an old debt. Improved machinery for our cotton-spinning we borrowed from England; now she comes to us to buy or copy the best she can find in our factories. It is clear, therefore, that it is not upon our superiority in labor-saving machines that we can depend for beating the foreigner. We sell him those machines as fast as we invent them.

Much the same may be said about the assumed finer talent for business possessed by Americans. Now no one can surpass us in admiration of the shrewdness and energy and administrative genius of our captains of industry. But it is obvious that, if these are inherently American qualities, they existed in our national character generations ago. Yet a half century since no one was saying that Americans were the best business men in the world. It was to England and France that we then looked for the typical masters of finance, princes of commerce, and kings of industry. If the American as such is so superior to all mankind in the capacity for business, why was he condemned to so long a period of apparent inferiority? The answer is plain. The development of the country's natural resources had not then reached a point to give American ability in that direction free scope. That is, it is what nature has done for us that really opens the way for our commercial conquest of the world.

An alternative explanation is sometimes offered in the assertion that it is our industrial organization, our combinations of capital, that have given us our successes. Some who are willing to admit that the American is not necessarily so superior to all other men in point of sheer mental power, yet point to our system of manufacture by Trusts as the secret of our great commercial expansion. But as to this, two things are to be said. The first is that, if there is any sound and lasting merit in this form of manufacturing organization, we cannot keep it to ourselves any more than we can our newest machinery. Foreigners will be as quick to take over the benefits of the one as of the other. In fact, they are doing it. So we must not think that we have any mysterious and exclusive patent, in the shape of the Trust, to assure our preëminence. The other remark about the Trust is that, if it has industrial advantages, it has also financial vices. This was trenchantly expressed by Mr. Hill when he said that too many Trusts were organized for the purpose of manufacturing, not commodities, but "sheaves of securities."

Here we come upon another reason often advanced for our industrial triumphs—the vast capital now under corporate control. This has undoubtedly been a striking feature of our development during the past half-dozen years. Cheap and abundant capital has been at our command. But what evidence is there, aside from our continued ability to develop the natural products of field and mine, that this will be continued, that we can go on borrowing from all Europe? Capital available has ebbed and flowed before, and it may again. Nothing is more certain than that a bad year or two, with the tumbling down of a few of the topheavy and overcapitalized concerns whose "sheaves of securities" have been unloaded upon a "generous and confiding people"—to use the politician's phrase—will produce a stringency where now we have a plethora. In any case, capital is but the incidental and shifting element in our national prosperity. The solid bases of our manufacturing superiority rest upon the fact that nature has lavishly endowed us with the raw materials which enter into manufacture. That is what we come to in the end: our industrial lead, as has been pointed out by a clear-headed English economist, Mr. Courtney, is due to our advantage in having cheaper coal at the pit's mouth than any other nation, and iron ore in quantity and at a cost beyond the power of any competitor to rival.

If any morals are to be drawn from all this, they are, obviously, (1) that our thanks should be addressed to Providence, and not to a tariff; (2) that any form of squandering our natural resources, or making them needlessly costly, as by artificial prices paid at the behest of either Trusts or labor unions, is a form of national madness; and (3) that all schemes of militarism or paternalism which would impose the burden of heavy and needless taxation upon our powers of production, are a direct playing into the hands of competing nations. They cannot beat us by direct rivalry or by force of arms; but they may vanquish us by the aid of our own follies.

ENGLAND AFTER THE WAR.

Current reports of the formation of an English shipping combination, of sufficient magnitude to rival the huge Ship Trust capitalized under American auspices, occurred rather strikingly in the week of the Transvaal peace announcement. Whether the reported "rival combine" is or is not as large as rumor would have it, and whether it does or does not contemplate keen competition with the Morgan undertaking, the mere fact that such a project is on foot directs attention to an extremely interesting phase of the present situation. The question which the next few years will have to solve is the question how far the recent decline of England's supremacy in foreign trade has resulted from causes permanent in their nature, and how far from the temporary exhaustion due to a costly war. It is needless to point out the great significance, to the world's commercial future, which is involved in this question.

The question cannot be answered yet with absolute confidence, because too

many varying influences have been at work simultaneously. Political economy has a way of cheating the seeker after principles by confronting him with two or more independent causes for a given result—causes often conflicting in their nature. Nowhere is this confusion greater than in the industrial sequel to a war. We believe it to be the fact that many intelligent people, even in high circles of finance, contend to-day that the recent immense prosperity of the United States, and particularly the overflowing of its capital into foreign markets, was somehow connected with the waging of a successful war. No particular effort is made to demonstrate how the war could have caused the prosperity; whether the prosperity would have come had our harvests failed and our industry not been on a sound basis; whether the Napoleonic and Crimean wars, for instance, had the same results. Precisely such confusing influences as were at work in causing American prosperity after the Spanish war have had a hand in England's industrial reaction during the Transvaal struggle.

Three influences have been operating against England's commercial prestige during the past three years—a prolonged and enormously expensive war; the blockade of the Transvaal goldmines, from which fully $75,000,000 annually in gold had previously been drawn; and aggressive competition from the United States, whose entry into the contest for neutral trade took place at the moment when England's own energies were being diverted. How far the drain of war expenses—on capital through the heavy loans, and on incomes through the heavy taxes—crippled Great Britain's financial vigor, is something which cannot be exactly measured. The cost of the war, it is estimated in London, has not fallen much short of $1,250,000,000. The strongest nation cannot divert such a sum from ordinary commercial purposes without feeling the strain severely. There is sometimes a partial compensation in the fact that the capital thus raised by a Government is paid out to home producers, for ships, ammunition, food supplies. But a very great part of England's war expenditure—perhaps the greater part—had to be made in other countries. The army was operated in a country which could not feed it; most of the supplies were bought in the United States. And what was spent for war material, at the British iron-mills, was placed at a time when orders for outside trade were at a maximum, and when, therefore, the manufacturer lost a chance in the field of international competition by the very fact of his Government contracts.

The reality of the financial strain has been shown plainly enough in other ways. England could undoubtedly have placed all its loans at home, as it did the $3,000,000,000 loans which were contracted during the Napoleonic wars. But the result, for the $730,000,000 bonds issued since 1899, as for those issued between 1793 and 1815, would probably have been so low a price as to make the cost to the Government exorbitant. This is why $103,000,000 of the consols and the war loan were allotted direct to American subscribers. The very unusual effort to shift the burden, however, shows how heavily it weighed; and, in fact, it has been frankly admitted by English financial critics that the London money market would have been seriously strained, even after the foreign allotments of consols, had not the Paris bankers taken the bulk of the temporary Treasury bills and thus helped to finance the Exchequer.

The embargo on Transvaal gold supplies necessarily added to England's difficulties. Most of the mines from which the $80,000,000 product had previously been taken annually, were owned in England. Barely $12,000,000 gold in all was produced between September, 1899, and the opening of 1902, and this was at least as heavy a loss in the productiveness of British capital as if harvests had failed or mill products become unsalable. It is quite true that English banks have kept good, and even increased, their gold reserves, and that Continental banks, except that of Russia, have simultaneously increased their own, despite the Transvaal blockade. But with England handicapped in foreign trade, even this process must have been costly as compared with the former imports direct from Johannesburg.

In short, it is plain that the war itself is responsible for a good part of England's recent seeming sluggishness in the race of international competition. The next question to find solution, therefore, is, What figure will England cut in the same race during the next few years? The strain on English capital is already relaxing. Probably there will be no more loans; the proceeds of the $160,000,000 April issue ought to cover not only the cost of bringing home the troops, but the $15,000,000 grant for rehabilitation of the farms. The output of Transvaal gold has already doubled since December. It is likely to double itself again in the next few months, and England's gold imports from South Africa, which have already risen from $629,000 in May, 1901, to $3,437,000 last month, may increase, later on, to the monthly $8,500,000 of a few years ago. It cannot, therefore, be very long before Great Britain enters the world's markets again without so serious a handicap. We shall then know exactly how much truth there has been in the lately familiar assertion that her methods are antiquated and no longer fitted to lead in the struggle for neutral trade. That Great Britain will regain her old position of unchallenged supremacy is not probable, with Germany and America in their present position. But neither of these two competitors is likely henceforward to enjoy immunity from British competition.

AMERICAN SCHOLARSHIPS AT OXFORD.

It has been advocated by some writers, *e. g.*, by Mr. F. C. S. Schiller, in the May *Fortnightly Review*, and by Mr. John Corbin in the preface to his 'An American at Oxford,' that the Rhodes scholars should be selected from men who have already graduated at American universities. If this course is followed, one thing is certain—they will become a separate colony. This will come to pass on account, not so much of their nationality as of their age. It is true that there have been cases in which, owing to exceptional personal qualities, a freshman of comparatively mature years has made himself quite at home with his juniors; but as a rule a discrepancy of this kind is a serious hindrance to complete freedom of social intercourse. Moreover, the actual terms of the bequest itself appear to make the election of graduate scholars quite inconsistent with the intention of the testator. The choice is to be determined, in part, by a report from "the headmaster of the candidate's school"; the successful candidate is "to commence residence as an undergraduate"—not as a research student—at some college; and special stress is laid upon the advantages of the residential system of Oxford, for the reason that, without it, students "are, at the most critical period of their lives, left without any supervision." The third consideration is regarded as of so great importance that the lack of such a system at Edinburgh is the sole reason which induced Mr. Rhodes to refrain, evidently with great reluctance, from establishing scholarships at that university. It is therefore likely that the trustees will find themselves compelled, both by the letter and by the spirit of the will, to impose a limitation of age, as is done by the Oxford Colleges themselves in the case of their own scholarships, which are usually open to the competition of candidates under nineteen years of age only. Prof. H. Morse Stephens has suggested, in the June *World's Work*, that to such a limitation should be added the condition of celibacy also, but one may reasonably hope that the social pace in this country has not yet become so rapid that the first requirement would not make the second unnecessary.

In order, therefore, to realize the situation that is about to be created, we must imagine a group of American youths who have just passed through the high school—the flower of the secondary education of Nevada and Arkansas as well as of Massachusetts and

New York—exploring the High Street and the Cornmarket, and "prospecting" for academic quarters. At this point some of them will encounter a difficulty which was hinted at by Prof. T. Case in the May *National Review*, but which our press, with its usual optimism on educational affairs, has either entirely ignored or mentioned only to dismiss it as unworthy of serious consideration. The difficulty in question is the fact that, no matter where he applies for admission, the Rhodes scholar will find himself confronted by a college entrance examination—an examination quite different from the university test known as "Responsions" or "Smalls."

In the June *Review of Reviews* Prof. F. H. Stoddard says that he "will no doubt be assigned to a college, rather than be allowed to choose one," as Mr. Rhodes's will expresses the desire that the American students shall be distributed among the various colleges. Professor Stoddard adds that all the colleges, "educationally considered, are equal." In each particular he is seriously mistaken. Each college retains absolutely in its own hands the right of deciding who shall be admitted to its membership. No university authority can overrule its decision in this respect, and it would be interesting to watch the face of a "head of a house" if it were suggested to him that the "society" of the college should delegate its power of the keys to some outsider, whether English or American. The Oxford colleges are very jealous of their privileges, and are quite unlikely to give way in the least degree on so important a question as the conditions of entrance. Then, it is not the case that all the colleges, "educationally considered, are equal," except in the sense that undergraduates of all the colleges are on the same footing as regards the degree examinations. Certain colleges—for instance, Balliol, New, and Corpus—admit no freshmen except those who intend to read for honors, and accordingly impose a much severer entrance test than those colleges which do not object to receive passmen also. That there is a real difference between the standards of various colleges is illustrated in the case of Mr. Rhodes himself, who was rejected by another college before he was admitted at Oriel.

Many of the Rhodes scholars will naturally wish to join one of the colleges which possess the greatest educational reputation. They will probably be surprised at the difficulty of the initial test in such cases. Even the colleges most hospitable to mediocrity require from freshmen a knowledge of Latin and Greek which, however elementary it may appear to boys coming from the higher forms of the English "public schools," will be regarded with greater respect by candidates fresh from the high-school curriculum of some sections of this country. It will not be surprising, then, if some of the Rhodes scholars knock at the doors of several colleges before they find an entrance at any, and if others are rejected wherever they apply. Such failures are the more likely to occur owing to the remarkable fancy qualifications prescribed for his scholarships by Mr. Rhodes.

It has been said that every Rhodes scholar will be at liberty to choose for himself whether he shall read for a pass or an honors degree. This is, no doubt, literally true, yet most American students, whatever their intention on entering, will soon find themselves strongly influenced in the direction of an honors course. They will discover that not only in Oxford but in England outside Oxford, great importance is attached to the class in which a man graduates. They will also find themselves regarded as picked representatives of the educational products of the United States, by whose success or failure in "the schools" the quality of American education will be popularly gauged. The desire to reflect credit upon one's own State will be another incentive. It is true that prowess on the river or in the football field also counts highly for personal distinction, but such success is not at all inconsistent with a good showing in examinations, and is therefore not regarded as absolving an able man from the obligation of gaining a first or second. The decision to read for honors means in every case a concentration of study. Each candidate is confined to one range of subjects: he makes his choice between classics, mathematics, modern history, etc., and by that choice he must abide. Even with such limitations, the curriculum makes severe demands upon the diligence of well-equipped undergraduates, in vacation as well as in term-time.

Considerable anxiety has been expressed, especially by writers somewhat tinged by Anglophobia, as to the possible corruption of the democratic simplicity of the Rhodes scholars by the "glamour of ancient traditions and monarchical institutions." As a matter of fact, there is less snobbery in the life of present-day undergraduate Oxford than in any section of American society. There is less "tuft-hunting" in Oxford than in New York. It is possible, however, that some of the Rhodes scholars may prefer to remain in England rather than to return to their own country. Those, for example, who intend to enter the teaching profession will in some cases find better opportunities open to them there than here. It has escaped general attention that several years ago one of the Australian colonies established a scholarship, tenable in England, open to the competition of graduates from the local university. After a fair trial the scholarship was discontinued, as it was found that in operation it was really a fund for preparing clever natives of the colony for a career in England. As an evidence of the denationalizing effect of an English university education upon youths of foreign birth and parentage, one might quote the conspicuous instance of Lord Milner, son of Dr. Karl Milner, professor at the University of Tübingen. On the other hand, there are the equally conspicuous instances of W. H. Waddington, who was a high classic at Cambridge and rowed in the inter-university boat race, but afterwards became Prime Minister of France, and of Mr. Smuts, also a Cambridge graduate in the highest honors and recently a leader of a Boer commando. Perhaps the degree to which life in his own State will appear attractive to the Rhodes scholar when he has taken his Oxford degree, will depend very largely on the tone of local public opinion as to whether he is to be praised or blamed for having gone abroad for his education.

THE PARIS SALONS.

PARIS, May, 1902.

You hear it said on all sides this year that the two Salons are deplorably dull. French critics, weary of their task, dealers in search of a novelty to draw custom, chance visitors looking less for art than for sensation, artists eager for new creeds and new pronouncements, all will tell you the same thing: there is nothing in the old Salon; in the new the level is lower than it has ever been. But then the old Salon always has been dull since the second Society came into existence, and this year I found it pleasanter in some respects, probably because less crowded. The new Salon, I admit, has been more stimulating and amusing and sensational, but the mistake is to expect its exhibitions always to equal the first when every effort had to be made to justify the secession from the Artistes Français, and exhibitors borrowed liberally from their work during many years past.

As you enter the new Salon through the little garden facing the Avenue d'Antin, your eyes fall at once upon three strange nude figures raised on a high wooden platform. These are the symbolic forms—"Les Ombres"—by M. Rodin that are to crown his Gate of Hell, and that the French, who have a genius for ordering these matters as they should be, have placed in their relative positions at the height at which they will eventually be seen. Fierce emotion, expressed and fixed for ever by the sculptor's art, is your first impression as you look at the bowed heads and almost distorted limbs; and it is not until afterwards that you begin to question their monumental, their sculpturesque value; that you feel, as in the "Bourgeois" of Calais, their want of harmonious balance, of noble outline, of just those qualities which distinguish the work of the Greek sculptors who are to M. Rodin, as he has just been assuring a reporter in London, the great masters of all time. This year, whatever M. Rodin might choose to exhibit would attract the attention even of a public hitherto indifferent, so extraordinary have been the demonstrations in his honor in London—the horses unharnessed,

and his carriage, with Mr. Sargent on the box, dragged triumphantly through the streets by the Slade students. But for those who care, the three "brooding giants," as they have been described, need no such sensational advertisement, and the exhibition that contains them cannot be wholly commonplace.

When you have entered the building and mounted the stairs, in the first gallery you find yourself standing before a huge decorative panel, where beautiful women and satyrs are at play in a fair garden with its presiding deity overlooking them from a tall white pedestal, while more Arcadians come to join in their revels, rowed across the blue lake from a town lying like a white dream at the foot of the far hills, under a cloudless summer sky. This is M. Besnard's "Île Heureuse"; and though I have seen many pictures by him that I thought more splendid in color, more daring in experiment, more stately in composition, still, as a work not without charm by a painter of deservedly great reputation, this cannot be passed over in silence, nor can the exhibition in which it is hung be called dull without reservation.

The truth is, in almost every gallery is something that gives one, if not pleasure, at least reason for thought. Take the big characteristic Salon machines. None may be very remarkable. M. Gervex has painted the "Banquet of the Mayors" in 1900, and has made what was wanted, a record, more accurate and interesting than any photograph could be, of the principal personages who assisted at the function. M. Rixens has given a similar version of the formal tribute paid to Pasteur, more than photographic in its accuracy, less than artistic in its accomplishment. M. Dubufe has produced an enormous symbolic group, with Gounod—an excellent portrait, I believe—surrounded by musical angels in the correct symbolic poses. Still better are M. Detaille's two huge decorations for the Hôtel de Ville, in the old Salon, with incidents of the Revolution and First Empire for subjects, astonishingly vigorous and vital in their straightforward statement of historical facts. And best of all, from a decorative standpoint, is M. Aman-Jean's panel—and for this you must retire to the new Salon—a prim, formal garden; in the foreground a few languid ladies, in languid-hued draperies, languidly posed, playing with a peacock, very charming in sentiment and very graceful in design, but I cannot help wondering how its languor and pale tones, the color already faded in its first freshness, will stand the practical test of decoration. Even M. Aman-Jean has often been seen to greater advantage. If, however, more powerful and more beautiful work of the kind has been shown in previous exhibitions, these ambitious exercises are the proof that every year brings with it, of the workmanlike training, the complete technical knowledge and ability demanded as a matter of course of the French artist. He knows his trade, and this alone is a virtue, after the parade of amateurishness and incompetence in the English Academy.

When it comes to the portraits, there is much not only vigorous but original. Mr. Whistler, who had nothing last year, sends a group of five pictures. An exquisite little nude, "Phryné la Superbe," I have already described, I think, at the time it was exhibited in London at the International, where the two other smaller paintings, a shop and a marine, were also hung. But the portrait of Mrs. Vanderbilt, "ivoire et or," has never been shown anywhere before, and very beautiful it is; the canvas is oval in shape, the figure is seen in less than half-length, and is painted with a restraint and dignity that would be its passport into the Louvre. Nothing could be simpler. Over the shoulders, a dark wrap is thrown, its soft white ruffles of lace opening at the neck and making a high collar from which the head rises with infinite grace and distinction. But how well the figure fills the space, what character there is in the face; and how beautiful the surface Mr. Whistler gives, how entirely he succeeds in following his own counsel and concealing the means by which he has made it the perfect work of art it is! Below is the picture of a child in a red cap, "grenat et or," "Le Petit Cardinal," a flower-like little face, as lovely as the scheme of color of which it is the motive. There is nothing by M. Boldini, unfortunately, and Mr. Alexander also is unrepresented. But Mr. Sargent has that amazing portrait of two sisters which was at the Academy last year, and which seems as brilliantly clever, as daring, in Paris as it did in London.

In the power of realizing character and fearlessness in expressing it, M. Lucien Simon is not to be outdone by Mr. Sargent. He has two large groups this year. One, of a family party lingering over their coffee after dinner, with, for background, a window opening on a tranquil twilight landscape, is not so interesting, probably because the people themselves did not give him the same chance. But the second is not a bit less striking than Mr. Sargent's. Two Little Sisters of the Poor and an old lady they are visiting on their daily rounds have been his sitters, and it is easy to see the pleasure he has found in portraying and insisting upon the contrast between the two faces of the nuns—between the shrewdness, the benevolence, the humorous self-confidence of the older sister, and the shyness, the painful self-consciousness, the shame almost of the younger; between the old shrivelled flesh, lined and wrinkled, and the fresh young flesh, smooth and blood-warmed, the rich red line of the mouth telling so well in its sombre setting of black and white. But M. Simon has little sense of style. His work is brutal in its realism. He presents the facts before him as he finds them, and there his responsibility in the matter ends. It is a pity, for if his pictorial feeling equalled his powers of observation and technical proficiency, he might do wonderful things.

In point of size and enterprise M. Carolus-Duran's big family group, "En Famille," is, without question, the most important of the portraits. On a colossal stretch of canvas he has painted himself, his wife, his children, his grandchildren, even the beribboned *bonne* of the youngest, and the dog of the household—seventeen figures in all. The picture has the meretricious air of elegance so unpleasant in most of M. Carolus-Duran's later portraits, and the composition is without unity or dignity; but, on coming from the Royal Academy to the Salon, the very ability of the work and the physical energy it implies seem astounding.

M. Dagnan-Bouveret's portraits of Gérôme, in his palm-leaf embroidered coat, and two ladies in costly gowns draw the crowd, but the determination with which the painter reduces everything—flesh, stuffs, ornaments, backgrounds—to one smooth ivory-like surface is, to me, intensely disagreeable: he appears to flaunt his ultra-refinement of technique in one's face. Better, because more honest and straightforward, is M. Kroyer's open-air study of Björnson, a vigorous piece of realism. M. Blanche, too, is unusually good in his portraits of M. Cottet, the painter, M. Paul Adam, and a youth, as if he found it a relief to be free from the silks and draperies of the ladies of fashion he has so often painted. But M. Gandara once more has two portraits of beautiful gowns, one a filmy black stuff over white, rendered with a marvellous skill that would be delightful did it not reduce the woman inside to a mere lay model. Miss Cecilia Beaux hardly seems to me at her best in her three portraits. And if I mention a pastel, a charming arrangement in white and red, by M. Aman-Jean, a masterly little portrait of the late Cosmo Monkhouse by Mr. McLure Hamilton, and the work of M. Picard, Mr. Lavery, and Mr. Austen Brown, I think I have completed the list. M. Zorn and M. Edelfelt are among the absent.

It is in landscape, however, that painters begin to display the most marked individuality. Sometimes, it must be admitted, the striving after this individuality leads to absurd affectation and mannerism. But it is a good sign that painters are no longer content to make an accurate inventory of nature with Bastien-Lepage, or to record an impression that is less theirs than Monet's. It is true, Monet still has his disciples; the strong work of M. Claus and M. Buysse, the Belgians, and the prismatic effects of M. Eliot, are tributes to his influence, just as the noble landscapes of M. Harpignies and M. Pointelin in the old Salon prove that the romantic tradition is not yet exhausted. But, as a rule, in the new Salon each man seems eager to use his eyes for himself and invent a new formula, though, it may be, in a few years' time when we look back, there will be found more of unity in their aims and accomplishments than we are now conscious of. M. Ménard sees a world all pale gold and green, with tender distances and silent waters, and great white clouds piling themselves up on a luminous sky. In such a landscape this year he has set the long, low walls and towers of Aigues-Mortes, and few things in the Salon have quite the same solemn sentiment and beauty, the same magic of light and atmosphere. M. Le Sidaner takes any commonplace subject which happens to present itself—for instance, the garden of a little suburban villa, where the table has been spread for dinner, and a lamp lit before all the afterglow has faded from the heavens—and, by sheer truth of tone and light, produces a harmony that has a very intimate, personal charm. M. Cottet paints the sad litle gray Breton village on the barren shore by the sea in the cold winter light, with a dignity and pathos that make me wish he had cut down his big canvas and left out the heavy black-robed figures of the peasant women on their way to mass in the village church. Mr. Morrice, whether in a Venetian café at evening with the Salute in

sight, or on the shores of the northern sea, always sees his subject in decorative lines and masses and delicate color arrangements. But it is impossible to name all the painters of good landscape. Lhermitte, Billotte, Lagarde, Lebourg, Thaulow, and as many more, all have pictures of more or less note. Then there are M. Raffaëlli's characteristic streets. And I was interested to see a series of five canvases by Mr. Childe Hassam—the Quai Voltaire in Paris, the Spanish Steps in Rome, flowers, fruit—though I do not think they have quite the personal quality of much of his work; it is almost as if he had felt the necessity of suggesting French masters out of deference to the Salon.

I should not give an adequate idea of the exhibition, perhaps, if I did not at least refer to some of the other paintings which I have not space to describe—the six studies of the same face, each differing in expression, but all alike mist-enveloped, by M. Carrière; the enigmatic figure in armor by Mr. Humphreys-Johnston; the Venetian impressions by Mr. Vail; the carefully studied little interiors by Mr. Walter Gay; the rather monotonous seas by Mr. Harrison; the peasant bride and groom by Mr. Melchers; the brilliant effects of light in a ball-room by Mr. La Touche; the still-life studies by M. Zakarian, who has had the temerity to borrow the exact subject and arrangement of one of the Chardins in the Louvre. Nor is the element of sensation altogether missing. M. Veber, with his dwarfs and grotesques and spirit of "La Machine," is beginning to take the place in public favor of M. Béraud, who stays away altogether. M. Louis Legrand, too accomplished an artist to need such aids, seeks to "épater le bourgeois" by his bold use of the palette knife and the way he appears to be trying to model in relief with his paint. M. Flandrin, M. Milcendeau, M. Charles Guérin, and two or three others do what they can to revive the old fashion of eccentricity. But, on the whole, sensation is but feeble and faint-hearted. I might also point out that the more distinguished German painters, like Von Uhde and Liebermann, do not contribute.

The prints do not fall away from their high level of excellence and originality, though there is not, as in some previous years, any very new departure or movement or experiment calling for special notice. In the old Salon there are lithographs by M. Dillon (but where is M. Willette?), etchings by Mr. Pennell, a wood-engraving by Mr. Wolf; in the new Salon the wood blocks and etchings of M. Lepère, M. Florian, M. Renouard, M. Legrand, among others; the lithographs of M. Lunois, M. Rivière, M. Veber, and a long series of the various kinds of engraving by men who are masters of these different arts. But it is curious how little attention is given to original drawings for illustration. With few exceptions, most of the black-and-white drawings are simply sketches and notes for the artist's own use.

As usual, the average is nowhere higher than in the sculpture courts. Again, as often before, one sees on every side work of the technical distinction that never fails the French, and that made the decoration of the Exhibition buildings of 1900 possible. And it is because of this average that it becomes so difficult to write of the sculpture in such limited space. All that can be done is to call attention to a few of the more important contributions. I have already spoken of the work of M. Rodin, who towers over everybody, and whose influence reveals itself everywhere in subjects chosen and methods of treatment. He has also a bust of Victor Hugo in the new Salon, where a fragment of a tomb by M. Bartholomé, and two busts of laborers by M. Meunier, whose influence is as marked as M. Rodin's, are among the most notable things. In the old Salon, M. Frémiet's "Dugueslin" is full of go and vigor, and the sculptor has not been afraid to give a certain homely character, curiously convincing, to his hero, though M. Frémiet never designs an equestrian statue that one does not at once compare it, to its disadvantage, with the Jeanne d'Arc in the Place des Pyramides. Mr. MacMonnies's "General Slocum" is a fine, spirited performance, but Mr. MacMonnies is so accomplished that the action of horse and officer becomes almost too spirited in its truth—will not both, you cannot help asking, at the next step plunge into space? M. Hamar is showing the base of the Rochambeau monument in Washington; seen without the figure on the top, it seems too restless, while spreadeagleism, in its most rampant mood, is expressed by the allegorical bird.

More and more space is being given to the decorative work included under the general classification of *objets d'art*. The furniture, as a rule, repeats the exaggerations to which the grandiloquent name of "L'Art Nouveau" has been given. But many of the smaller articles, especially among the goldsmiths' exhibits, are of genuine beauty, while the French craftsman has always the proper respect for his medium: he does not, like the English craftsman, take rough peasant's work as a model. It is interesting, too, to find many artists, already distinguished as painters, sculptors, and draughtsmen, appearing as decorators. A scheme for a billiard-room, in which M. Chéret, M. Charpentier, and M. Bracquemond have collaborated, is shown; and also a piano painted by M. Besnard and carved by M. Charpentier. N. N.

MEDIÆVAL ART AT THE DÜSSELDORF EXPOSITION.

DÜSSELDORF, May, 1902.

The success of the Rhenish-Westphalian Exposition at Düsseldorf, whose formal opening on the first of May was signalized by the first public speech of the German Crown Prince, is an event of more than local, nay, of more than merely national importance. Planned towards the end of the nineties, at the height of an era of industrial expansion and enterprise, carried through during the financial depression of the last year and a half, it is a striking evidence of the foresight, pluck, resourcefulness, and skill with which German business men and manufacturers have weathered the crisis that is just passing. Limited as it is to the Rhineland and Westphalia, it demonstrates all the more impressively what enormous strides Germany is making in every domain of industrial production. For it is no exaggeration to say that the exhibit made here by two provinces only may well challenge comparison with the total of the German exhibit at the World's Fair of 1893. And there can be no question that, to the industrial world of both Europe and America, this provincial Exposition will impart lessons in a way even more instructive than those taught by the monster exhibits of Chicago and Paris.

It was a happy thought—a thought conceived principally by the Rev. Schnütgen, canon of Cologne, and Prof. Clemen, curator of Rhenish antiquities at Düsseldorf—to connect with this display of modern German industry and art an exhibition of the artistic productions of Rhenish Germany in the Middle Ages, chiefly in the domain of ecclesiastical architecture and sculpture. To be sure, it is a great contrast to step from the enormous halls of the Krupp iron works or the Westphalian mining companies, with their gigantic machinery and their ceaseless hubbub, into the quiet rooms where statues of saints and the portals of cathedrals proclaim the ideals of the past. But who would deny that these ideals have lost vitality only with regard to their outward form, that their essence holds good for us as well as our forefathers, and that the restless activity of modern life is more and more tending toward a reshaping and a rehabilitation even of their outward forms? To the antiquarian, the most interesting part of this mediæval collection is likely to be a superb array of church utensils and ornaments, sent hither by the ecclesiastical authorities of both the provinces concerned. Since practically all the great cathedral seats of northwestern Germany—Aix-la-Chapelle, Cologne, Münster, Paderborn, Hildesheim, Osnabrück among them—have showered their treasures upon this Exposition, there is here offered an unequalled opportunity for studying from the originals what mediæval handicraft produced in textile industry, in ivory, wood, intaglio, bronze, silver and gold work. Never before have altar shrines and other reliquaries been brought together in so impressive numbers or in so instructive a selection; never before has the development of their forms from the austere solemnity of the Byzantine manner to the wilfulness of Gothic naturalism been placed before us so systematically or with so much detail.

The most striking feature, however, of this mediæval museum—at least to the layman—is that here, for the first time, has been successfully tried in Germany what the Trocadéro and the South Kensington Museum have already accomplished for France and England: the reproduction, in plaster-casts, of large monumental works of native architecture and sculpture. It is really astonishing how little Germany, which has done so much for the study of the history of the plastic arts of other countries, has thus far done towards bringing the greatness of her own artistic past home to the popular mind. It is undoubtedly legitimate that, as a means of æsthetic culture, the history of Greek sculpture should occupy a place in the national education superior to that of any other similar study. But that the great mass of German students should be absolutely ignorant of the wonderful creations of German architectural sculpture in the Middle Ages; that the German section of the great collection of plaster-casts in the Royal Museum at Berlin should embrace two small rooms on a floor the main body of which is given over to the rich Egyptian collections; that even

in the Germanic Museum at Nürnberg the plaster-casts of mediæval monuments should be crowded together in dark passages and cloister-like halls, where a proper inspection and careful study are entirely out of the question—these are facts which prove once more how recent a thing the growth of a strong national consciousness has been in Germany.

In Düsseldorf, for the first time, a mediæval exposition has been attempted that has a truly mediæval setting. There is no place in its halls where the visitor would not feel something of the quiet grandeur of a mediæval church, whether entering through the graceful portal of Our Lady's at Trèves (the same which the Emperor is going to give to the Germanic Museum at Cambridge), or standing under the massive arches of the "Paradise" of Münster cathedral, with its solemnly archaic statues of the apostles, or passing by the splendid choir screen of All Souls' Chapel in the cathedral of Aix-la-Chapelle. That there may be dangers in this architectural framework of a museum of national civilization cannot be denied; the temptation involved in it to sacrifice scientific correctness to picturesque arrangement is obvious, and several even of the best-known museums in Europe have fallen victims to this temptation. On the other hand, the connection between architecture and sculpture is so close that a statue deprived of its architectural background in most cases becomes an isolated, lifeless number; and mediæval sculpture in particular is absolutely unintelligible if it is not studied "on the spot," *i. e.*, in its organic relation to its sister-art.

It is to be hoped, therefore, that the Düsseldorf example will be followed in the two great museums of mediæval art which are now being planned in Berlin and in Munich. As for America, we may congratulate ourselves that the most conspicuous feature of the Emperor's noble gift to the projected Germanic Museum of Harvard University consists in this very combination of monumental sculpture and architecture. It would be a consummation of which America might justly be proud, if the whole of this museum were to be carried out in conformity with this magnificent beginning.

KUNO FRANCKE.

Correspondence.

RABELAIS ON WAR.

TO THE EDITOR OF THE NATION:

SIR: In 'Gargantua' (chap. xlvi.), Grandgousier, in reply to Touquedillon, who reveals Picrochole's plans of conquest, says:

"C'est trop entrepris: qui trop embrasse peu estrainct. Le temps n'est plus d'ainsi conquester les royaumes, avec dommages de son prochain frere christian: ceste imitation des anciens Hercules, Alexandres, Hannibals, Scipions, Cesars et autres telz, est contraire à la profession de l'Evangile, par lequel nous est commandé garder, sauver, regir, et administrer chascun ses pays et terres, non hostilement envahir les autres. Et ce que les Sarrasins et barbares jadis appelloient prouesses, maintenant nous appelons briganderies et meschancetés. Mieulx eust il fait soy contenir en sa maison, loyallement la gouvernant, que insulter en la mienne, hostilement la pillant; car par bien la gouverner l'eust augmentée, par me piller sera destruict" (édition Burgaud des Marets et Rathery).

These words of the great French writer of the first half of the sixteenth century are full of interest. If we lay aside all moral considerations, and suppose that a part of the millions sunk in Cuba and the Philippines were spent in making roads, in irrigating the arid lands of the West, in promoting education, in helping the small college, etc., the benefit to our country would be incalculable.

TIMOTHY CLORAN.

VANDERBILT UNIVERSITY, NASHVILLE, TENN., June 5, 1902.

EARLY PUPPET-SHOW PICTURES.

TO THE EDITOR OF THE NATION:

SIR: One of the most attractive of the papers presented to Dr. F. J. Furnivall in honor of his seventy-fifth birtnday, is M. Jusserand's "Note on Pageants and 'Scaffolds Hye'" ('An English Miscellany,' pp. 185-196). The text, to be sure, contains little that has not long been well known, but it is accompanied by two pictures, reproduced from an early manuscript, representing, in M. Jusserand's opinion, "scaffolds" or "pageants" such as were used in the great cycles of York, Wakefield, Newcastle, Preston, Kendal, Louth, Chester, Coventry, Norwich, and other towns. These at once arrest the attention, not only on account of the notable skill of the artist, but because, as M. Jusserand truly says, no contemporary picture of an English Corpus Christi pageant has yet been discovered. Pictures and plans of similar pageants or stages in France and Germany exist, and are now easily accessible; for the pageants of England we have been obliged to content ourselves with imaginative reconstructions, based upon the detailed account given by Archdeacon Rogers, towards the end of the sixteenth century, and the scattered details found in the expense books of the "companies" or "gilds" concerned in the plays, as printed by Sharp, Fitch, Furnivall Morris, Miss Toulmin-Smith, and others. Most of these accounts date from the sixteenth century; the earliest go back to the beginning of the fifteenth. Pictures of such pageants from a fourteenth-century manuscript would therefore have a double claim upon the attention of all students of the early drama.

Unfortunately, the pictures reproduced by M. Jusserand are not pictures of pageants in a Corpus Christi play. They are, as any one may discover by careful examination, pictures of puppet-booths. In the first one, especially, the traditional figures of Punch and Judy are clearly recognizable. What names they bore then, what acts they performed, or what dialogue delighted the children before the booth, may, to borrow one of Sir Thomas Browne's phrases, "admit of a wide solution." The attitude of Punch and the presence of his club suggest that action and dialogue did not depart essentially from the delightful brutality of present-day performances.

These pictures are, moreover, not so entirely unknown as M. Jusserand supposes. In 1848 Mr. J. O. Westwood published the first picture in the *Archæological Journal*, and accompanied it with a brief discussion in which the true character of the performance is definitely stated and duly commented upon (v., 198 ff.).

In spite of these facts, our indebtedness to M. Jusserand is undiminished. Few, even among scholars, now read the early volumes of *Archæologia* or the *Archæological Journal*, and the history of puppet-shows in the Middle Ages is one of the most interesting and perplexing chapters of an interesting and perplexing subject. Notwithstanding the minor contributions that have been made and the books that have professed to contain an adequate treatment, almost everything remains to be done.

Yours very truly, JOHN M. MANLY.

CAMBRIDGE, MASS., June 5, 1902.

WORDSWORTH'S "ODE TO DUTY."

TO THE EDITOR OF THE NATION:

SIR: Your correspondent, in the *Nation* of June 5, who inquires about an expunged stanza of Wordsworth's "Ode to Duty," will find it in the 'Poems' of 1807, where it appears as the sixth stanza. I myself reprinted it, accidentally, in a collection of verse, 'Through Love to Light,' which I published in 1896. It brought me a number of inquiries, some of them from devout and critical Wordsworthians, to whom I should have thought the 'Poems' of 1807 would have been known. The poem was, I believe, written in 1805, presumably with this stanza as a part of it; and, inferior as it is to the other stanzas, we are undoubtedly indebted to Wordsworth's wiser second thought for its exclusion from editions subsequent to that of 1807.

Yours very truly,

JOHN WHITE CHADWICK.

BROOKLYN, N. Y., June 5, 1902.

TO THE EDITOR OF THE NATION:

SIR: Professor Knight, in his latest edition of Wordsworth (the Eversley edition of 1896), in volume ii., page 71, refers to a "proof copy of the sheets of the edition of 1807, which was cancelled by Wordsworth," in which the entire poem is unlike its later form, particularly in the first four stanzas; and in this proof copy is your correspondent's sixth stanza, which was printed in 1807 only. Fortunately, Wordsworth's "discretion" led him to change this first copy, with the exception of the stanza referred to. Two stanzas only stand as originally written, though the change in the seventh is very slight. Professor Knight does not use this cancelled stanza in his text. He gives the entire proof-copy version in a note.

Professor Dowden was not unaware of this stanza, which surely is unworthy of being recalled, for he wrote me about this earlier draft in 1890, soon after it was discovered by Mr. J. R. Tutin of Hull. The printed sheet which gives this earlier version of the entire poem was found in a copy of the poems of 1807. Mr. Tutin had the sheet printed with the following heading, "Cancelled Version of Wordsworth's Ode to Duty." Both Mr. Tutin and Professor Dowden sent me a copy, and I shall be glad to send one to any interested person who may not have access to the Eversley edition of 1896.

I find after writing the above that Mr. Hutchinson, in his edition (Oxford) of Wordsworth's Poems, has given this same sixth stanza in brackets *in the text* of the poem; which undoubtedly accounts for A. T. Quiller-Couch's using the stanza in his 'Oxford Book of English Verse.' This use of the stanza by Mr. Hutchinson is question-

able, as it certainly mars the poem. Finally, I discover a note without a reference, and therefore easily overlooked, on the "Ode to Duty" at the end of volume iv. of the Dowden edition of the Poems. The cancelled sixth stanza is quoted in it.

Sincerely yours,

CYNTHIA MORGAN ST. JOHN.

ITHACA, N. Y., June 8, 1902.

Notes.

Among the fall announcements of Little, Brown & Co., Boston, are a three-volume edition of hitherto uncollected speeches and writings of Daniel Webster, and Helen Hunt Jackson's 'Glimpses of California and the Missions,' for the first time by itself, and with numerous illustrations by Henry Sandham.

The publication of Mr. W. A. Linn's 'Story of the Mormons' is closely followed by the announcement of 'The Founder of Mormonism,' by I. Woodbridge Riley, for immediate issue by Dodd, Mead & Co.

E. P. Dutton & Co. have nearly ready a work on 'The English Lake District,' by Mr. Ruskin's biographer, Mr. W. G. Collingwood.

Among Macmillan's reprints which call for no more than passing mention, as having been already considered in these columns, are Walter Crane's 'Line and Form,' and Foster-Milliar's 'Book of the Rose,' in a second edition, thoroughly revised after seven years. Thackeray's 'Henry Esmond,' in two volumes, carries on the Dent edition of this author.

Messrs. Longman offer the eighth edition of Mr. Balfour's 'Foundations of Belief.' It has been somewhat enlarged with explanatory notes, and is provided with a new introduction and argumentative summary.

The Sonnets of Shakspere were, of course, bound to find a place in John Lane's dainty and companionable "Lovers' Library"—the text in green ink, the borders in violet; yet how much more ornamental would have been an index of first lines.

A real service to present-day readers alike and to the memory of a true man is the edition of 'The Serious Poems of Thomas Hood' (London: George Newnes; New York: Scribners), just added to the Caxton Series. Mr. H. Granville Fell's illustrations, or most of them, we could forego, for the thin -paper volume with blue limp covers is pretty enough without them, and the weakest are something of a disfigurement. Here are "One more unfortunate," "We watched her breathing through the night," "I remember, I remember," "Eugene Aram," "The Haunted House," "Hero and Leander," "The Midsummer Fairies," and many more products (not all wholly "serious") of the sad humorist. The punctuation needed more attention than it has received.

In reviewing, four years ago, Mr. W. A. Paton's 'Picturesque Sicily' (Harpers), we pointed out the free use he had made of Gaston Vuillier, and also his own struggles with the Italian language. It seems in keeping with this that his work has now been done into Italian, 'Sicilia Pittoresca,' and published, with 48 half-tones, in Milan (Remo Sandron). The compliment to the solider portion of this American work is not undeserved.

'The International Year Book' for 1901 (Dodd, Mead & Co.) maintains the standard of previous volumes. The United States has thirty-one pages, Great Britain fourteen, France, China, and Cuba each ten, Germany eight, the Transvaal seven, the Philippines six, with a cross-reference for military operations. There are twelve maps and some thirty-five illustrations. The sciences receive adequate attention, and the editor's care seems to have been bestowed on every topic that belongs to "the world's progress during the year." Obituary notices are full for Victoria and McKinley, less extensive in the cases of Crispi, Li Hung Chang, and others. Authors (as Mr. Kipling) who had put forth nothing of great importance during 1901 are relegated to the articles on Literature, which for America and England covers nine pages, for France four, for Germany less than two, for Russia one: Gorky, as a notable new arrival, gets an individual notice. Six pages are devoted to education in the United States, and Mr. Carnegie's gifts and Mr. J. P. Morgan's exploits are duly chronicled. The impossibility of being wholly up to date, or down to date, is shown in the case of the Panama Canal, here considered under that of Nicaragua; next year the positions may probably be reversed.

'The History of India for Boys and Girls,' by Sri Hemlota Devi, translated by M. S. Knight (Longmans), can safely be recommended as an elementary history of her country by a Hindu—especially valuable as treating of the native religions from a native standpoint. Two-thirds of this little book are devoted to the pre-European period of government. Maps, plans, and engravings illustrate the text, and the price brings the book within the reach of all. Allowed as a school-book in India, it is necessarily reserved upon many subjects concerning which most Indians feel deeply. In this its English form it will probably be appreciated more by elders desirous of having some elementary knowledge of Indian affairs than by "boys and girls."

J. Vendryes, a pupil of Henry, Havet, and Thurneysen, in a recent work, 'Recherches sur l'Histoire et les Effets de l'Intensité Initiale en Latin' (Paris: Klincksieck), seeks to overturn the now commonly accepted view that the Latin accent was an accent of stress, and to find in it, at least in the classical period, a tonic or melodic accent, a view to which C. W. L. Johnson inclines in an article included in the 'Studies in honor of Professor Gildersleeve.' M. Vendryes admits, however, for the prehistoric period an accent of intensity resting upon the initial syllable, and to the phonetic effects of this accent the main portion of his work is devoted. In some points he is in agreement with Sommer in his 'Handbuch der Lateinischen Laut- und Formenlehre' (1902); in others he differs. The effect of intensity upon quantity, and the subject of syncope and absorption, are treated at length, and with an abundance of illustration. In an appendix a new attempt is made to solve the vexed problem of the Saturnian, bringing in the theory of initial intensity. The work concludes with an "Index des principaux mots latins étudiés." The author challenges criticism at many points, but his exposition is always clear, interesting, and suggestive.

The History of Uganda, in the native language, which has just been printed in England, is a remarkable testimony to the progress made in that country in the past twenty-five years, as well as a noteworthy contribution to literature. The author is the Katikiro (Prime Minister) and the representative of his countrymen at the coronation, and his book, so far as our knowledge goes, is the first published history of an African people written by a native in his own tongue. In it he gives some account of their mythology before the teaching of Christianity, and it is curious to note that, as with the Dûsuns of Borneo, so this central African tribe attributes the origin of evil to a woman. When the Creator sent his grandson Kintu and his wife Nambi to the earth to people it, he strictly enjoined him to go early in the morning so that "your brother Death may not see where you go, for if he goes with you he will kill all your children." In obedience to this injunction, "before it was light, he packed up all his things, and set out, and came down to earth; but his wife suddenly remembered that she had left the corn behind which was to feed a fowl she had with her. She said to her husband, 'I have left the corn for the fowl in the porch of the house, I must go back and fetch it.' Her husband Kintu refused, and said, 'You must not go back, for if you do you will meet Death.' But his wife was obstinate," and went back and got the corn. As she was returning to the earth, "Death met her, and said to her, 'Why have you left me, my friends?' So he went with Nambi, the obstinate wife, . . . and when Kintu begat children Death killed them." Our extracts are taken from a translation printed in *Uganda Notes*.

The *Annales de Géographie* for May contains an interesting account, by M. Gaston Bonnier, of his experiments in what he terms a "new chapter of science," geographic botany. One series consisted in cultivating shoots of the same plant or tree near Paris and on the Mediterranean shore, and observing the manner in which each set adapted itself to the different conditions of soil and climate. Another was in taking plants growing in the neighborhood of Paris and subjecting them, through artificial cold and electric light, to Arctic conditions. The results of these experiments convinced him that they constituted a positive argument in favor of the hypothesis that the specific characteristics of the plants of any region have been gradually acquired through adaptation to the climate. An article on the rainfall of northern France, an orographic and geological description of Algeria, and a discussion of the products of Argentina also deserve mention. The extent of the undeveloped resources of this South American country may be gathered from the single fact that if all the land on which wheat could be grown were cultivated, the amount of the crop would be increased twenty-four times. An encouraging report is given of the progress of Madagascar in agriculture and the means of communication.

Mr. Edward Wilson James continues in the first part of volume iv. of his *Lower Norfolk Co. (Va.), Antiquary* his valuable lists of slave-owners—here for Princess Anne County, in 1778. In an interesting footnote it is told of Jacob Hunter, senior, who is

set down as the master of sixteen human chattels, that he lost twenty-eight negroes in the Revolutionary war—not by being carried off by the British, but by some distemper imported from them by a negro by the name of Frank. Frank was an habitual runaway, and his "treatment consisted in being stripped naked and hoisted to the top of a tall pole, where the wind could blow on him." "Many negroes ran away to the British," and such as were recaptured by the Continental frigates or privateers were sold at auction, subject to the equity of their owners.

In spite of its pronounced character, the face of the late Edwin L. Godkin offered some difficulties for portraiture by pencil or camera. Among the more successful attempts is the "imperial panel" photograph made by F. Gutekunst, Philadelphia, some years before Mr. Godkin's bodily vigor had been impaired; and now reissued. For a later period there is nothing better than George C. Cox's photograph (South Orange, N. J.). In its own field, G. Kruell's wood-engraving, of masterful technique, has no rival (East Orange, N. J.).

—'The Ruin of Education in Ireland' (London: David Nutt) is a remarkably outspoken treatise by a sincere Catholic (proud of his religion, and respectful regarding its essentials) concerning what he believes to be the ecclesiasticism and undue influence of the Jesuits and the bishops, which are tending to impoverish and mar the intellectual progress of Ireland. It is unfortunate for the views put forward that the author, Frank Hugh O'Donnell, has been such a discontented element in Irish affairs through the last third of a century. Nevertheless, the book must be taken on its merits, and Mr. O'Donnell's exposition of educational tendencies in his native country cannot be lightly set aside and will have its influence. He is especially strong against the clerical monopoly of teaching, and the spending of vast sums by the heads of Irish Catholicism upon unnecessary buildings and gaudy ornamentation, to the neglect of education. He contrasts the comparative liberality of his church upon the Continent and elsewhere with its narrowness in Ireland, and emphasizes the belief of most thoughtful Irish Home Rulers that it is accorded more power over teaching and ordinary affairs of life by a Protestant Government, in its attempt to maintain its position, than it would be by a Home Rule Government.

—Scholarships which are of the nature of prizes given solely on the strength of an open competitive examination are the rule in England and the exception in America. So far as it leads to the absorption of valuable scholarships by those who have means of their own, the English system involves some waste of endowments; on the other hand, the standard of excellence maintained in scholarship examination undoubtedly is higher in proportion as the field is wider from which competitors are drawn. The standard required for English scholarship is high, and this makes every ambitious schoolboy aim at some scholarship, and also centres more attention and consideration upon serious work than athletics are commonly supposed to allow. In scholarships, then, we find a corrective for the too great interest in athletics. Holders of scholarships at English colleges and schools certainly take a position of distinction which, under favorable circumstances, easily amounts to a sort of acknowledged leadership. Nor do those of them enjoying a good income independently of their scholarships at all invariably accept its stipend. Some recent foundations, indeed, provide in set terms that the stipend shall revert to the foundation or go to a second scholar when the scholar-elect does not stand in need of it. Some such provision exists in the case of the recently founded musical scholarship which commemorates Lewis R. Nettleship at Balliol. Nettleship dreamt of music as a power which should unite the jarring sects and septs of mankind by promoting generous human intercourse unaccompanied by the danger of luxury. But these good offices could, he thought, be well performed only when musicans habitually learned things other than music, and this view the late Sir John Stainer also shared. Perhaps both of them were moved to dissent, and thus had their views clarified on this point, by the curious position still made at Oxford for degrees in music. Alone of all Oxford baccalaureates (there are six others), for the B.Mus. no residence at Oxford is required. At all events the most pointed dissent from the notions of musical education underlying these regulations is certainly embodied in the institution of the Nettleship scholarship.

—The Nettleship scholar is required to read for Honors; and varied as are the avenues to the B.A. degree afforded by the eight honor schools at Oxford, not one of them contains any music unless it be found in "Animal Morphology" under "Hearing and the Ear." Our scholar may take his honors in Animal Morphology if he so chooses, although his previous studies would hardly make the choice a prudent one; but otherwise his work for the degree has no direct bearing upon music whatever. Nevertheless, the standard rigidly enforced at Balliol in electing the Nettleship scholar insures his being so exceptionally gifted that he cannot possibly discontinue the serious pursuit of music, in prosecuting which he finds more than competent assistance in the college organist. Thus the college community secures an influence which plays no small part in undergraduate life, where, so far as music goes, the Nettleship scholar is always *primus inter pares*. Organized by the college organist, the concerts of the Balliol College Musical Society, one of the most successful of Jowett's innovations, had already taken a very firm hold before the Nettleship foundation. That these concerts now have so definitely their place in the front rank, and yet not only have retained the intimate character which makes all social doings in a college more like family gatherings than public assemblies, but also keep a more than undiminished hold upon the interest of the undergraduate world, has largely been made possible by the Nettleship foundation. Details from programmes might be quoted to show the important part played by its beneficiaries. Nor is this all. A vista of the further possibilities of usefulness from the Nettleship foundation has been opened up by the frequent participation in these concerts of Mr. Donald Tovey, now a rising pianist and composer, the elected Nettleship scholar when the scholarship was founded in 1894. From time to time Mr. Tovey has also lectured publicly in the College Hall. One of his lectures was on the Sonata Appassionata of Beethoven, viewed as of the nature of a tragedy; a second dealt with concision and diffuseness in musical style; and he has lately entered his caveat against the abuse in current musical criticism of the terms "intellectual" and "emotional."

—The Seventh Annual Report of the British School at Athens (Macmillan) is devoted chiefly to an account of the excavations in 1901 of Dr. Arthur J. Evans on the site of the ancient palace at Knossus in Crete, with a briefer report of the explorations of D. G. Hogarth at Zakro, on the eastern end of the same island. Never before have results of like extent and importance been so promptly and withal so satisfactorily published, with many plans and other illustrations. Mr. Louis Dyer's recent letter on the House of the Double Axe has anticipated any summary of our own of Dr. Evans's revelations. Other British excavations at Præsos have brought to light an inscription in an unknown tongue, but in Greek characters of the fifth century B. C., which may be helpful if the language is the same as that of Dr. Evans's clay tablets. Some seals, and far more impressions of seals, were discovered, of which several bear representations of a man with a bull's head, clearly the Minotaur. Among the finds at Zakro were nearly five hundred nodules of clay bearing impressions of intaglios, and two of these which are reproduced in this Report are of the Minotaur type. Boyd Dawkins discusses the skulls from cave-burials at Zakro, but comes to no final judgment on vexed questions. At the close of the volume is a reunion of two fragments of a Greek inscription, one part being in the British Museum and the other in the British School at Athens, due to the ingenuity of Dr. Wilhelm, who is perhaps the most brilliant of living Greek epigraphists.

—Dr. Evans reports that the Throne Room of the palace at Knossus has been enclosed and roofed-in—"a work rendered urgent by the effect which exposure to the weather was already beginning to produce, both on the throne itself and the seats and parapet." His successors will be grateful to him for this provision, but the question arises at once, What will become in a few years of the excavated ruins which are not quite valuable enough to receive this special care? Apparently they are to be left exposed to the elements, and the next twenty years are likely to damage them more than the last two thousand. Organic objects which have been excluded from the air for a long time are notably wont to crumble on being exposed, and even a casual examination of the Elgin marbles in the British Museum shows that, after the polished surface of the stone has worn away, great scale-like flakes are liable to break off. When the process of disintegration once begins, it goes on with increasing rapidity. Probably the surface of the Parthenon at Athens has suffered more obviously from the action of the elements during the last century than in the preceding thousand years. Many an ancient Greek inscription, too, is far less legible to-day than on its discovery half a century

ago. Thus the intense vigor of archæologists in excavating the remains of antiquity is in imminent danger of leaving to following generations an imperfect heritage. The importance of making the most accurate and complete publications of discoveries is emphasized when we remember that many of the objects found will not remain long unchanged. In this matter is to be seen a much-needed lesson for Americans. The tombstones of the seventeenth and eighteenth centuries in New England graveyards are disintegrating now more rapidly than ever before, and many important family records are disappearing. When the reader thinks of the recognized necessity of covering the Egyptian granite of the obelisk in the Central Park with a slip of paraffine, in order to preserve it, he will need no long consideration to see that the marble, slate, and sandstone monuments of our graveyards need similar treatment if they are to be preserved. Many a town has old stones of which the citizens are proud now, but of which the inscriptions will become illegible if care is not soon taken. These stones are for the most part seldom seen, and so are out of mind, but some are near the crowded streets of our cities, and yet are neglected. This generation has obligations to its successors, and it will be blamed if it transmits to them only printed copies of the originals.

—Old Korea, like Britain with England, Wales, and Scotland, was a territory inside of which were three kingdoms. These had a long history of intestine struggle and border wars, with alternating invasions or succor from China or Japan. In the old books they are called Kaokuli, Sinlo (Silla), and Petsi (Pak-je), the first and most warlike being in the north, the second in the southeast, and the third in the west of the peninsula. Silla, cultivating commerce and the arts of civilization, carried on trade even with the Arabs, in whose books the kingdom and its products are described. China made Silla its ally, and in a great invasion, 660 A. D., Chinese armies overran the peninsula, overthrew a dynasty nearly 700 years old, and annexed Pak-je as a province of China. The victory was commemorated by uprearing a great stone ten feet high and seven feet wide, but the next year the son of the deposed Korean King raised the standard of revolt, and tumbled the big token of imperialism and conquest into the river which flowed past his father's capital. Four centuries later, during the great drought (1047-1084), the stone was exposed, and the people drew it to the bank, but did not set it up. Covered with the débris of eight centuries, it lay undisturbed until 1886, when Mr. Tong, then Secretary of the Chinese Legation in Seoul, and now Taotai of Tientsin, journeyed to Pu-yu and had excavations made at the spot indicated. After eighteen feet of earth had been removed, he struck and uncovered the prostrate stone. Clearing off the surface, he first took a careful rubbing, which is reproduced word for word in the *Korea Review* for May, 1902, and made preparations to remove the stone. Unfortunately, that night a terrible storm of wind and rain, which unroofed houses, swept away scores of dwellings, and caused loss of life by the river-flood, roused the superstitious fears of the people. Thinking the spirits were angry, they filled up the pit. In substance, the text, after the usual fulsome compliments to the Chinese Emperor and his Generals, praises the "benevolent assimilation," and declares that the King, Crown Prince, thirteen Ministers, and 700 courtiers were carried to China, while five Chinese Generals or Military Governors were left to administer the seven districts (250 prefectures), which, according to the text, had a population of 6,100,000.

THE SIEGE OF QUEBEC.

The Siege of Quebec and the Battle of the Plains of Abraham. By A. Doughty, in collaboration with G. W. Parmelee. With plans, portraits, and views. Six volumes. Quebec: Dussault & Proulx. 1901. [1902.]

The six volumes of this work constitute the most extensive and important monograph which has so far been written in Canada on any episode in the country's annals. But the interest of the subject outstrips all bounds that are merely local. Montcalm's defeat and the English occupation of Quebec were great events in the history of the whole continent. In the world struggle between England and France they rank even before the battle of Plassey, and they adorn the last days of a hero with sudden, brilliant, and decisive triumph.

The campaign of 1759 has frequently been described, for the theme is a spirited one and there is no dearth of information. Of recent narratives the most valuable and the most typical are Parkman's in 'Montcalm and Wolfe,' Casgrain's in 'Montcalm et Lévis,' and Kerallain's in 'La Jeunesse de Bougainville.' Parkman may be said to represent the English historian; Casgrain, the French Canadian; and Kerallain, the French. In comparing these three, it must be stated that the differences between the second and third are more pronounced than those between the first and second. Casgrain is a champion of Vaudreuil, Lévis, and the local militia. The strongest sympathies of Kerallain are with Montcalm, Bougainville, and the French of France.

Mr. Doughty, who is the chief author of the present work, has unquestionable advantages over all his predecessors in respect to his material. What others have collected, he can coördinate; but that is by no means all. His quest for new documents in foreign archives has been highly successful, and family papers, both French and English, have been put in his hands by descendants of the leading staff officers. It is obvious that such discoveries as can now be made must relate to details rather than to essentials, but the business of researchers consists in getting at the facts, even where critical issues are not concerned. We do not mean to imply that Mr. Doughty's investigations have led merely to the determination of minutiæ. For example, he shows that the attack which settled the fate of Canada was planned by Wolfe, and not by his brigadiers; but the aim of the study is to settle a number of vexed questions rather than to upset views of the campaign and the battle which are generally accepted. We have spoken of the fresh evidence. It fills three large octavo volumes, and other volumes will be published at a later date in separate instalments. Most of the new data come from England and France, but some striking illustrations of European interest in the war before Quebec have been drawn from the Private Archives of the Czar.

The main clue to the contents of this work has already been given in the statement that the documents, as opposed to the text, occupy three volumes. In other words, the first half of the space is devoted to narrative and the last half to *pièces justificatives*. Of the materials we shall not be able to speak at any length. Of the text, the first volume is devoted to biographies of Wolfe and Montcalm, the second to an account of the siege from its beginning until the first days of September, and the third to a careful and precise narrative of the battle, with its immediate consequences. Regarding the biographies we shall only say that they are genuine lives of the two generals, and not sketches of their time. The life of Montcalm, which has been furnished by the Hon. Thomas Chapais, is the most exhaustive biography of him that has yet been published in English, while Mr. Parmelee's life of Wolfe adds a good deal to the information supplied by Wright. The special value of the work, as an independent study of sources, arises from the quality of the second and third volumes. In commenting upon the text we shall therefore restrict our notice to them.

A number of moot points may be mentioned to show the range of the discussion. Some are antiquarian and some historical. As an instance of the first and least important class, we may recall a debate which has arisen over the exact scene of the battle. Two years ago hue and cry was raised in Canada (and in England, too) by a report that the Ursulines of Quebec were about to sell for building purposes the famous Plains of Abraham. Partly in consequence of the sentiment thus aroused, the Dominion Government bought the property in September, 1901, and made it over to the city of Quebec. Now the land represented by this purchase has nothing to do with the battle, and the Government knew it, though the public were under a wrong impression.

"The deeds of this transfer," says Mr. Doughty, "show that the purchase and preservation of this estate was not made upon the erroneous assumption that it formed part of the historic battlefield, though much of the indignation aroused, both at home and abroad, when it was learned that the land was to be divided up and sold for building lots, was due to the mistaken idea that it was the actual site of the conflict of September 13, 1789."

The originator of the popular mistake was Alfred Hawkins, whose 'Picture of Quebec with Historical Recollections' appeared in 1834. Mr. Doughty goes back to the unequivocal evidence of the early maps and descriptions, thereby correcting an error, equally complete and curious, which has for many years prevailed in Quebec itself.

The historical doubts involved are, however, considerably more important than those presented by topography. Several of them may be stated for illustration. Was the idea of scaling the heights conceived by Wolfe or by his brigadiers? In the disputes between Vaudreuil and Montcalm had the Governor or the General the juster cause? Was Bougainville guilty of heinous and fatal remissness on the night of September 12-13? Did Townshend seek unfairly to vilify Wolfe, and was he justified in signing the Act of Capitulation without first showing it to Monckton? Did Ramezay fall short

of his duty in surrendering Quebec? These are some of the questions which Mr. Doughty seeks to solve. His analysis of the operations about Beauport is also carefully studied; but the chief interest of his narrative centres around such disputed points as have just been indicated. Let us take up one or two of these, considering particularly Wolfe's relations with his brigadiers.

When Pitt was preparing for the campaign of 1759 in Canada, Wolfe desired a larger armament than could be given him, but as a concession he was allowed much latitude in the choice of his officers. Monckton and Murray, the first and the third of his brigadiers, enjoyed his confidence, and so did other leading officers, like Carleton and Barré. Townshend, on the contrary, was put forward by influence, and cannot be considered a general of Wolfe's own choice. From being second brigadier, he had great prominence in the campaign, and after the Battle of the Plains, where Wolfe was killed and Monckton wounded, he became the acting commander-in-chief. On the French side there was complicated discord. On the English side there was no discord which weakened the efficiency of the service; but a mutual dislike, perhaps distrust, destroyed real cordiality of intercourse between Wolfe and Townshend. As early as July, Wolfe snubbed Townshend sharply for inefficiency, and on September 6, a week before the battle, Townshend wrote to his wife: "Gen. Wolfe's health is but very bad. His generalship, in my poor opinion—is not a whit better; this only between us."

On the last day of July, Wolfe was repulsed with severe loss at Montmorency. On the 22d of August the physical frailty which he shared with Nelson, was increased by fever, and for a week he remained unable to take personal charge of the operations. It was then (August 29) that he asked the advice of his brigadiers regarding future movements. The attack below the city had failed, winter was coming on, and the General's illness rendered the situation critical. The brigadiers were not slow in expressing their opinion when it was thus asked. They advised against making any further attempts in the neighborhood of Beauport and Montmorency, and recommended an attack on the town from the northern side. The particular distance, however, is not named, and Parkman, with many other writers, has by this means been led into error. What the brigadiers had in mind was an attack to be delivered about twelve miles above the town, as may be gathered from their detailed plan of operations which seems to have been published for the first time in 1901 by Col. Townshend. Such a movement, it will be quickly seen, was something very different from the plan that was executed. Wolfe accepted this suggestion at first, and preparations were made accordingly. Then, after reconnoitring for himself, on September 10 he reached a totally different conclusion. Instead of going twelve miles above the town, where he would doubtless have been opposed by Bougainville, he decided upon trying a surprise and *coup de main*.

That Wolfe won his triumph by his own genius, aided by remarkable good fortune, is apparent in three ways—first, from a passage in the 'Journal of an Officer of Fraser's Regiment,' where it is stated that the General reconnoitred the north shore above the town on July 18, in search for landing-places. He then thought the scheme practicable, and Major Dalling found two or three places where troops could be put ashore. Secondly, the arrangements which had been made early in September for going up the river were suddenly changed. Thirdly, Mr. Doughty has procured from the British Museum copies of letters which put Wolfe's responsibility for the enterprise in the clearest light. On the eve of the battle the three brigadiers sent a letter to the General, wherein they stated that they were in need of further information. "As we do not think ourselves sufficiently informed of the several parts which may fall to our share in the execution of the Descent you intend to-morrow, we must beg leave to request from you, as distinct Orders as the nature of the thing will admit of, particularly as to the place or places we are to attack." Wolfe replied in the last letters he ever wrote, the one to Monckton and the other to Townshend. The former communication, which is considerably the longer, contains some specific information about the landing and the arrangements for the advance. It then concludes: "I had the Honor to inform you to-day that it is my duty to attack the French Army. To the best of my knowledge and abilities I have fixed upon that spot where we can act with the most force, and are most likely to succeed. If I am mistaken, I am sorry for it, and must be answerable to his Majesty and the public for the consequences."

Mr. Doughty has outlined impartially, and we should think finally, Wolfe's part in the whole campaign. He has also produced the evidence which settles the most interesting single point in the strategy of the operations before Quebec. For the rest, he defends Bougainville from the charge of negligence which Parkman, among others, brings against him. He is much more friendly towards Montcalm than Casgrain is, and less friendly towards Vaudreuil. He vindicates Townshend from having sought to vilify Wolfe or rob him of his laurels. In the matter of the capitulation he is favorable to the action both of Townshend and of Ramezay. In each case there is cogent documentation, and Mr. Doughty is careful not to outrun his sources. Bougainville's case is perhaps the most notable. Parkman says: "When Bougainville saw Holmes's vessels drift down the stream, he did not tax his weary troops to follow them, thinking that they would return as usual with the flood tide." As a matter of fact, Bougainville was following strict orders which he had received from Vaudreuil and from Montcalm. He had been told to keep touch with Holmes's vessels and prevent a landing at Cap Rouge or higher up. In compliance with instructions he followed Holmes as far up as Pointe-aux-Trembles. He and his superiors were outgeneralled, but he was not guilty of leaving anything to chance.

If there were space, much might be said about the materials which have been collected and employed. As it is, we can hardly do more than state that they will be indispensable to every future historian of the Seven Years' War in America. Through the aid of important personages in three countries, Mr. Doughty has been able to procure copies of papers which must have remained beyond the reach of the ordinary investigator. The effort and expense of bringing together all these documents would also in most cases have acted as a powerful deterrent. Besides additions made to the published correspondence of Wolfe, Townshend, and Bougainville, the cartography of the campaign has been largely supplemented by Mr. Doughty's discoveries. "Realizing the importance of studying every available account written by those who took part in the events narrated, the authors have obtained copies of twenty-three distinct relations of the siege, and seventeen plans of the battle of the Plains of Abraham, seven of which are in manuscript." Besides printing unknown and unpublished documents of great value, Mr. Doughty gives us an elaborate bibliography of the Siege of Quebec, divided into one section of books and pamphlets, and into another of manuscripts.

With the exception of careless proofreading, the mechanical features of these volumes deserve high praise. The first three volumes are profusely illustrated with photogravures by Goupil and Hyatt, and with collotypes of good quality. The printing is excellent—the best, we should think, that has been done in Canada since the celebrated edition of Champlain. Altogether, Mr. Doughty and Mr. Parmelee have good reason to be pleased with the outcome of their long labors.

NOVELS, MOSTLY OF AMERICAN LIFE.

The Lady Paramount. By Henry Harland. New York: John Lane.

The Kentons. By W. D. Howells. Harper & Brothers.

The 13th District. By Brand Whitlock. Indianapolis: The Bowen-Merrill Co.

Drewitt's Dream. By W. L. Alden. D. Appleton & Co.

The Making of a Statesman. By Joel Chandler Harris. McClure, Phillips & Co.

The beauty of Mr. Henry Harland's story, 'The Lady Paramount,' is at once obvious and subtle, altogether satisfying. Any one may enjoy it who has an openness to the happy exhilaration that comes with fine weather, gurgling brooks, singing birds, all the fresh loveliness that accompanies the miracle of spring. The simple love story of Susanna, Countess of Sampaolo, all exquisitely embroidered, charms the senses like music conceived in a spirit of joy, expressed in elaborate harmonies. This, for the average reader, indifferent to the means by which literary effects are wrought. To the informed and critical the book yields more. It is the work of an accomplished artist whose material is a cosmopolitan experience. It is a finished expression, not of the art of representing people and things as they are, but as they might be, might beautifully be. Novelists are not very often born in the ranks of a great aristocracy, nor does their breeding or experience often lead to a successful assumption of intimacy with the exalted. Of the vulgarities and absurdities into which such assumption may betray them, "Ouida" in her heyday was a dreadful example. On the face of things, Mr. Harland seems to inherit Ouida's adoration for an aristocracy *qua* aristocracy, to be under the spell of an Old World glory. His men and women (supremely women) exhale perfection, slow accumulation of centuries of privilege. The physical na-

ture he delights in is not fresh from the hand of God, but blooms in a loveliness that testifies to man's patience, taste, and skill. He is thrall to ancient faiths and policies, more Catholic than the Pope, more royalist than the King. He is reactionary, mystical, sensuous, and not ashamed or apologetic. Yet in all this he, we think, does but seem. His serious and sincere intention is artistic; therefore, he makes deliberate choice of conditions in which beauty, physical, mental, and moral, may most naturally either have been raised to perfection or degraded to corruption. Let it be said to his credit, both as man and artist, that in 'The Lady Paramount,' at all events, he ignores the possible corruption. Having chosen his characters and *milieu*, he moves under the guidance of the artistic feeling for truth to nature, the artistic sense of measure and proportion. In essentials he holds fast to what is simple, common, permanent in human nature; and for the probable influence of given conditions on the natural man his perception is very clear and sure. Thus we have Susanna, a gay, romantic, generous girl, yet decorous, imperious, and enchanting as good women of great race may well be; Antonio Craford, a common mortal in love, yet making love in a very superior manner, which, if not exactly English, is distinguished; Patapouff, at heart a common cat, with the external graces of a thoroughbred.

Mr. Harland's purely literary qualities reflect his cosmopolitan experience. His grace and vividness smack of France, his sensuousness of Italy, his ironical humor of America. The point of view in social relations and the frank carelessness of speech are English. There is no positive indication of the author's race or nationality. Nothing is certain except that he is an artist choosing to write in English, the free, light, slightly exotic English of Mr. Henry James. Against that are a serious artistic intention, a loving and patient cult of beauty, so absolutely, so hopelessly not English.

As Mr. Howells's well-known theory is that a novel should be a representation, as closely as possible a literal transcript, of pages of real life (for himself. characteristic American life), conformity between his theory and practice is taken as a matter of course. His new novel, 'The Kentons,' shows us a well-to-do family of Tuskingum, Ohio, suffering inconvenience and painful agitation because the eldest daughter, Ellen, has chosen to fall in love with an unmitigated detrimental. Ellen, though beautiful, is serious and cultured; therefore, the "most cultivated young men of Tuskingum" pass her by, preferring her sister Lottie, who boasts that she is not literary or cultured, and whose reported conversation proves that she does not defame herself. So poor Ellen takes up with a journalist named Bittridge, an impertinent young man, flippant and shallow, and, worse than all, not very keen about Ellen.

The deeply disapproving parents stand helpless before impending calamity. They have made a compact not to cross their children in love; thus, Mr. Howells intimates, maintaining an American tradition which forbids parents' trying to prevent a marriage that they know must be disastrous. Nothing that has ever been written about Americans can surprise other nations more than this. Fortune sometimes favors the pusillanimous. Bittridge gets himself talked about with a married woman (nothing scandalous, of course); Ellen realizes feebly the impropriety of a passion for such a bold buccaneer, and her parents, at last, take courage to carry her off from Tuskingum. When Bittridge, having pursued them to New York, commits the indiscretion of kissing Ellen, the Kentons feel fiercely outraged. The unhappy family sails for Europe, meeting upon the way a young man who, in his lighter moments, is fatally like Bittridge, but *au fond* serious and good. To him Ellen transfers her bleeding heart, thus permitting her distracted parents to return to their home and their evening game of checkers. At this game, Mrs. Kenton invariably cheats—a fault condoned by her husband, who presumably finds it humorous. There is an analogy between the Kentons' attitude towards their children and their pastime. They perceive no sanctity in a rule; they do not, so to speak, play the game.

The interesting points in the story are the failure of culture to improve character, and the failure of that American policy (if it is an American policy) which prevents a direct and serious exercise of parental authority. The cultured Ellen has neither self-control, nor taste, nor common sense. Has Mr. Howells been asking himself, Whereunto is culture good? And is this the dismal answer? The bold and hectoring Lottie has finer instinct and better judgment than Ellen, besides being really kinder to "poppa" and "momma." In drawing Lottie and the parents, Mr. Howells seems to us to have fallen back on observations made twenty years ago. We cannot but think that, in Ohio, parents have broken the American tradition of detachment from their children's interests. At all events, in the situation conceived, a modern Lottie would instruct them how to behave, firmly insisting that it is the custom of the "best people" to deal with infatuated Ellens in peremptory fashion. Boyne Kenton's passion for the young Queen of Holland is an imaginative excursion, suspiciously indicative of the author's desire to show the awful consequences to republican youth of a surfeit of romantic fiction.

The story of Jerome (familiarly Jerry) Garwood of Polk County, Congressional candidate for the Thirteenth District of Illinois, includes a particular description of the methods by which legislators are selected, nominated, and conducted to success or defeat at the polls, and a general criticism of the process and results. Bad as practical politics are supposed to be, no view is too gloomy to lack confirmation in Mr. Whitlock's narrative, or so bitter as to find reproof in his reflection. Current censure of the republic's government, uttered by ignorant and prejudiced foreigners, is mild as milk in comparison with this denunciation, spoken by one, presumably native-born, certainly possessed of all the secrets and mysteries of what he calls the "business of the people's government." This rather important business, Mr. Whitlock declares, is carried on in every State of the Union by a handful of men, all ignorant, dirty, dishonest, and profane, not in order to promote the people's happiness or comfort, but solely for what they, the managers, can get out of it in cash down or in promises to pay—that is, in offices (chiefly post-offices), and the salary and influence accruing. It may be argued that the Polk County gang was exceptionally wicked, that their candidate was unusually weak and unscrupulous, even that the author so intimately acquainted with party politics has himself been turned down by the bosses and is taking a shabby revenge. Such consolatory possibilities, if admitted, cannot banish the conviction that the record of Garwood's campaigns is a truthful presentation of almost all political campaigns in a country where the people are, by way of flattery, assured that they govern themselves and seldom resent such an insultingly untruthful statement.

Garwood is conducted through three campaigns—twice to an inglorious victory, and, at last, to ignominious defeat. His victories are won by his managers, and his defeat by himself, by his vanity, his selfishness, and his short-sighted treachery. The weakness of the book as criticism is in the failure to show any reason why the boss, Jim Rankine, should have implicitly trusted a man of only superficial attraction, one plainly without mental energy or shrewdness, or enough moral perception to yield to a demand for honor among thieves. In constructing his story the author has had no trouble. No artificial arrangement could produce such a good dramatic effect as the direct narration of actual events in their actual sequence, moving from local primaries through county conventions, stumping tours with accompanying brass bands, torchlight processions, and general pandemonium, to the fatal day when the whole nation is given over to what is grandiloquently described as a "quadrennial tragedy of personal ambition." Garwood's private history is naturally interwoven with his public one, and in his domestic relations he is saved from complete disaster only because disappointed wives are sometimes more forgiving than disappointed officeseekers and angry bosses, and because mothers can always ascribe the infamy of a son to the plots and villanies of envious enemies. The wife and mother, rigidly honest, unsophisticated, trustful, and loving, are very well drawn, without condescension or apology. The author knows and loves them as he knows and loves the prairies, to which he gives a few descriptive paragraphs so vivid that one longs for more, if only to relieve the impression that Polk County is thickly dotted with barrooms, filled with slovenly, sweating politicians plotting for power, playing poker, drinking, smoking, giving and taking gross personalities as harmless chaff. The corrupt speech of these people is enlivened by metaphors. Meaning to betray some one, they threaten to "camp on his trail," to "go out with their knives"; and no sooner have they elected a candidate than they caution him to "fix up his fences for a second term." The author, speaking in his own person, uses freely an American variant of the English language. His people "sense" and "voice" things; they "flex in every fibre"; and when he wishes to tell us that some delegates had been slow to identify themselves with the winners, he says: "The band wagon had taken them by surprise and rolled by too swiftly for them to climb in." This is reconditely American, and the author's apparently unconscious use of such metaphor gives a fine touch of gen-

uineness to a novel in every way significantly American.

'Drewitt's Dream,' by Mr. W. L. Alden, is a gay tale. Ostensibly one of adventure, quite recklessly improbable, its real motive is a discussion of American political methods, or, rather, an explanation and defence from the mouth of a successful boss. Drewitt, the dreamer, a young Englishman on his way home from India, stops over in Greece, on the chance of seeing a battle with the invading Turks. He reaches a town that momentarily expects an attack, and the very night of his arrival the crash of guns is heard, followed by clatter and rush of Greek soldiers, forsaking their posts. A general rout ensues, and Drewitt on horseback is swept along with the mob. He picks up an Englishwoman, whom he instantly loves, and is shot while trying to reach a deserted block-house. Waking in a hospital, he is persuaded that many of the circumstances he narrates are but the fancies of a disordered brain. He, however, reserves a belief in the rescued maiden and her unparalleled beauty. In the hospital he meets Mr. Gallegher of Sallust City, Iowa, whose talk about himself is both amazing to an Englishman and amusing. He pictures himself as a very honest and moral man, distinctly creditable to his country. Agreeing with the author of 'The 13th District,' he says politics is a business, but legitimate and honorable, and one in which advancement of private interest is involved with doing one's duty to the public. The author declares that Mr. Gallegher "did not possess a particle of the national humor," but there are many moments when he is infected by Mr. Alden's humor. "Nobody," he tells Drewitt, "ever offered me a bribe, and nobody ever caught me in a crooked transaction." Proceeding to narrate how, taking advantage of his position as boss, he had made several profitable deals, he winds up: "No man can find any fault with that; and the fact that I gave up politics just as soon as I had made a fortune, shows that I wasn't a politician for any ambitious or selfish purpose." Discoursing, further, on distinctions between bribery and corruption, on the uselessness of "reformers," on the duty of attracting to one's party a strong "religious element," also a strong "whiskey element," Mr. Gallegher triumphantly justifies the system whereby he has become a millionaire, and Sallust City a model of municipal perfection. In disquisition Mr. Gallegher is delightful and in action convincing. Sharing Drewitt's enthusiasm for the lost lady of his dream, he proposes that his yacht *Caucus* be used for a search expedition. Personally conducting the strange pursuit, he shows the courage, resource, and tact of a born ruler, who, whether we call him despot, or tyrant, or boss, is fit to control the mass of men and even to establish them in a higher condition of happiness. It is, however, difficult to believe that a free republic is his proper sphere. The company on board the *Caucus* includes persons amusing and remarkable; but, beside Mr. Gallegher, they fade into insignificance.

'The Making of a Statesman' tells of an era preceding that of definite recognition of politics as a business. It represents those presumably good old times when a political career, in the South especially, was the privilege of a gentleman, and intimately connected with oratory embellished by quotations from the classics. Yet Mr. Featherstone, who rose to be a leader in the State of Georgia, and whose public record was most honorable, was, from the beginning, tainted with dishonor. He was more culpable than Mr. Gallegher, because he rose to power by the theft of another man's brains. The voluntary self-sacrifice of Billy Spence is not probable, but, that being granted, all that follows is natural and pathetic. The remaining tales in the volume sustain Mr. Harris's reputation for revealing negro character in negro dialect. Aunt Minervy Ann, telling about Miss Puss's parasol, is a perfect specimen of the immortal "Mammy."

American Gardens. Edited by Guy Lowell. Boston: Bates & Guild Company. 1902. 112 plates.

If any evidence be needed that the formal garden has found a ready acceptance among us, it is amply furnished by the remarkable collection of photographs published under the above name, a collection representative of the best work of an earlier time as well as of the present day. Our ancestors were familiar with the formal manner, and, in a modest way, as befitted a by no means wealthy age, exemplified their skill in the surroundings of many a worthy mansion. Though in most cases sadly changed, quite a number of such old gardens have come down to us. Of several that have been preserved in their original condition, views are given in 'American Gardens.' Of all these, the one which seems closest to the state in which it was a century or more ago, is Washington's garden at Mt. Vernon, the trim box hedges of which, enclosed by the quiet buildings of the "quarters," give a sense of well-ordered neatness very soothing in these days of nervous hurry. But, for a higher quality than mere neatness, for peace and poetry, the old Carroll garden at Annapolis stands without an equal. Its serene white statues raised on lofty vine-clad pedestals and backed by dense masses of foliage cannot fail to bring to mind one of the finest portions of the Borghese gardens. Few other things within the book show so well as does the view of the Carroll garden the perfection to which nature will bring a simple formal arrangement, if this arrangement be wise in the beginning.

But it is not to eighteenth-century gardens that the book chiefly devotes itself. They make a small part of its contents. Since for nearly a century the formal manner has been out of fashion, we find that by far the larger part of the book represents the work of the last ten years. How great is the volume of this work and how high a level much of it has reached, few would suspect who had not closely followed the subject. So many and so excellent are the examples that it is difficult to single out any for special comment without doing injustice to a host of others perhaps equally excellent. To put them in categories, however: among the minor gardens few possess a charm equal to those designed by Mr. Wilson Eyre, while among the larger and more elaborate, those by Mr. Charles Platt and by Carrère & Hastings easily occupy the first rank. For the sake of this publication the country has been carefully searched for its finest gardens. Excellent photographs of these, well reproduced, give a most lucid idea of the present state of garden design among us. The index has the unusual merit of presenting many sketch-plans showing the points from which the views were taken, and thus enabling one the more clearly to understand the garden's design.

Mr. Guy Lowell's introduction to the book is an essay on the history of gardening, and a critical consideration of gardening as practised in America. He points out that, owing to the peculiarities of our climate and of our manners and customs, our gardens necessarily differ from those of other countries, and are adapted to our needs and surroundings. Nevertheless, the impression left by the book is, that although we have made very great advances in garden design, much that we have done smacks too strongly of its foreign source, and that we have by no means established a national type of formal garden. The field is a wide one and the workers in it are alert and intensely interested. Let us hope that before long they will develop a manner that will speak more clearly of our own time and people.

Uncle Sam, Trustee. By John Kendrick Bangs. New York: Riggs Publishing Co. 1902.

This book purports to give a history of Cuba down to the year 1898, and to record the achievements of the Government maintained there by this country since that date. The "history" consists of scraps from books of every description, and may be dismissed at once as a compilation devoid of merit. As to what has been accomplished in improving the conditions of life in Cuba during the last three years, it is impossible not to deplore that so interesting a theme should have fallen into such incompetent hands. The photographs with which the book is adorned show that material conditions have been much improved under American rule, but the author seems incapable of giving a really intelligent account of the system that has been followed. We know that some $40,000,000 has been collected from the taxation of imports, but we are left altogether in the dark as to the wisdom with which it has been expended. The debates in Congress indicate that the economic condition of Cuba is unsatisfactory, and it would be interesting to learn whether or not the revenues of the country have been wasted in extravagant improvements when they could have been applied to the relief of industry.

Instead of facts of this kind, the reader is treated to pages of indiscriminate adulation of those officers of our army who have been stationed in Cuba. These gentlemen may well beg to be delivered from such friends as Mr. Bangs. They may enjoy appreciation without relishing abject sycophancy, and might well prefer to have their deeds speak for themselves rather than to have them advertised by a too obsequious civilian. There is some attempt at fine writing in the book, but the style is rather slovenly. It is not clear what is meant by the assertion that "the betrayal of their trusts by the convicted men of the Cuban Postal Service is not an unmixed blessing." More intelligible is the statement that "within a period of eight months, the health of the city of Santiago became quite as salubrious," etc.

Finland: Its Public and Private Economy. By N. C. Frederiksen, formerly professor of Political Economy and Finance in the University of Copenhagen. London: Edward Arnold; New York: Longmans, Green & Co. 8vo, pp. 300.

In view of the present widespread interest in Finland and the Finnish people, an accessible book, dealing with the subject in a serious and at the same time popular manner, is very welcome. Professor Frederiksen's eleven chapters are concerned with the civilization, agriculture, forestry, industries, commerce, navigation and fisheries, money and banking, means of communication, exchequer, and civic duties, and, finally, with the Government of Finland and its future. On these topics the author has succeeded—with limitations that will be noted further on—in gathering within a very narrow compass a great deal of information which, on the whole, is presented in a readable form.

Like the rest of the world, Finland has made rapid material progress during the last century, but it differs from many other countries with a more highly developed parliamentary government in having its finances in a very flourishing condition, the budget balancing with a good surplus, while the state owns valuable assets worth several times more than the inconsiderable public debt, which has, moreover, been wholly incurred for productive purposes. In the matter of private economy the resources and industries of the country show a marked development, the rapidity of which will be apparent from the statement that the value of the manufactured products, which in 1887 was estimated at 114 million marks ($22,800,000), in 1899 had risen to about 300,000,000 ($60,000,000). In 1887 each manufacturing plant had on an average eight workmen and an annual output valued at 20,000 marks, while in 1898 the same averages were twelve workmen and 36,000 marks. The wages received by the workmen vary for the different trades; they may be said to average about 800 marks a year, to which must be added, in some cases, free house rent and firewood. As several members of a family often are wage-earners, these incomes compare very favorably with those of the agricultural laborers, not excluding the peasant proprietors.

Finland, like the United States, has vast tracts of public lands, and the lengthy review of the land laws of Finland would, therefore, be of especial interest in this country if it were clearer than, unfortunately, is the case. The Government lands of Finland are, according to the author, opened up for settlers on very liberal terms, but what these terms are one may read through the entire chapter without being able to find out. The law

"is not unlike the American Homestead Law, which gives grants of land on the condition of cultivating a small part and paying an insignificant fee. It has been decided that these crown lands which are fit for cultivation shall be separated from the forest land, surveyed, mapped out, assessed for taxation, and offered to people who wish to settle. The settlers are to have an additional advantage [additional to what?], that for the first fifteen years they are entirely exempt from taxation, and have to pay only half-taxes for the next five, while they may, perhaps, get this exemption extended to forty years. The taxation is very moderate, being only from two to twelve Finnish *penni* (*i. e.*, from a farthing to a penny) per hectare."

On the whole, it may be said that the greatest fault of the book is a lack of concise statement and statistics. Statistical tables do not make a book readable, but they convey a deal of information to those who are in need of it. From the present book such tables are almost entirely absent.

The author, in a kind of prefatory note, thanks Mr. Edward H. Cooper of London for advice and careful coöperation in respect of his English text. Still greater care might, it seems, have been exercised. The book appears, simultaneously with the English, in a French and a Danish edition. The last was probably the original, and some of the English expressions seem to be due to faulty translation. Thus, on page 25, decisions, in the sentence, "There are *decisions* about enforcing this system in the Finnish laws as early as the fourteenth century," probably stands for "provisions," the Danish word "bestemmelser" meaning both. Whether the following passage is due to a slovenly translation or slovenly thinking, may be questioned:

"Rye, which was introduced by the Swedes in very early times, superseded barley to some extent in the *eighteenth century*, and still later it was largely replaced by oats. In the fourteenth century rye was cultivated only in parts of Southern Finland. In the eighteenth century it became, however, the most important material for bread, and is now cultivated as far as the 64th and 65th degrees of latitude. In the years subsequent to 1870 the cultivation of rye increased enormously, *but later still, after 1887, it gave place to oats.*"

"Finland contains about 1,100,000 sheep." "The number of sheep owned by the poorer class of peasant is, however, increasing as they grow more prosperous."

"The duty on maize in Finland, as in Sweden, is a great difficulty in the way of keeping and fattening pigs; it is 2 marks 25 *penni* (about 45 cents) per 100 kilos on all maize coming from other countries than Russia, *and to bring it from Russia does not pay so well.*"

It would, we think, have been more correct to translate the Swedish word *gran* (*Abies excelsa*, or rather *Picea excelsa*) by "spruce," which is its regular commercial name, than by "fir"; the more so as the Swedish word rendered "pine," *fura*, is the etymological counterpart of the word "fir," and also commercially goes by the name of "Scotch fir."

It will have been observed from these quotations that the author occasionally brings forward his own opinions about things. In fact, he greatly overdoes this, for his opinions embrace almost the whole field of human knowledge. Some of the opinions seem rather naïve:

"If we remember the good result of the last budget, as well as the by no means excessive duty now demanded on articles so well able to pay duty as alcoholic liquors and tobacco, we find that it would be quite possible to abolish entirely all the other duties. In fact, they are all detrimental to the economic life of the country, *and they are causing difficulties at the custom-house.*"

The author is a thorough admirer of the "Anglo-Saxon." On the very first page of the book we read: "At present the highest stage of all [civilization] has been reached in England and the United States." It would be interesting to see if the French edition contains the same statement.

Religion in Recent Art: Expository Lectures on Rossetti, Burne-Jones, Watts, Holman Hunt, and Wagner. By P. T. Forsyth. London: Hodder & Stoughton; New York: Edwin S. Gorham. 1902.

It is a relief to the conscientious reviewer that Mr. Forsyth confesses in his preface that "he trusts much to the ability of the skilful reader to skip," for it is only by the liberal use of this ability that we have found it possible to read the book at all. To put it frankly, this is almost the most wordy and repetitious book that we have ever seen, and its author shows a truly remarkable ability to spread one small idea over many pages, turning and twisting the expression of it, exclaiming and orating, but adding nothing whatever thereto. The system is such that it hardly matters what you skip, for any one sentence on a page is as good as any other to indicate the general drift; you may choose one at hazard, with confidence that the others are only slight variations of it, and turn a page or two, lucky if you find anything different at the second dip.

Mr. Forsyth's "religion in art" has nothing to do with ecclesiastical decoration or Biblical illustration. His thesis is that great art has a spiritual content, regardless of its formal subject, and that what the artist, consciously or unconsciously, tells you of the soul is his religion. Thus we have Rossetti; or, The Religion of Natural Passion—Burne-Jones; or, The Religion of Præternatural Imagination—Watts; or, The Religion of Supernatural Hope—and Holman Hunt; or, The Religion of Spiritual Faith. In his search for meanings, Mr. Forsyth claims the right to find them whether or no they were intentionally put there by the artist, but he is, naturally, best pleased with the conscious allegorizing and didacticism of Watts and Hunt, and it hardly needs his assurance to convince us that the book would never have been written but for the opportunity of dealing with these two. The artistic value of Watts's work we take to be very great, that of Hunt's work to be relatively small, but each has chosen to confuse the art value of his work with its value as thought, and to rest his claim to serious consideration on what is really of least importance. The allegories of Watts do no harm—they "will not bite" more than those of Spenser; but the "thoughts," in so far as they are definite and translatable into words, might be conveyed in pictures not worth the canvas they were painted on. Mr. Watts chooses to think them all-important, and he is, therefore, the delight of preachers and expounders of meanings, such as Mr. Forsyth, for in this case there can be no doubt that the meanings really were put there with *malice prepense.*

It would, however, be a poor expounder who could not explain more than was ever said, and Mr. Forsyth manages to find things, even in the pictures of Watts, that can hardly have been intended. We all know the noble "Love and Death," and its allegory is obvious enough; but see Mr. Forsyth add to it:

"And, chief of all," he says, "a great light falls upon the figures' back, and we remember that we never see the dawn upon death till it has gone by; that we get to know our angels when they have left us, and that we mark the sunlight on the graves only when they have well grown green. The source of the light, you further mark, is not

in the picture; and so the hope in our latter end is no ray from within our visible frame of things, but from a life and a world beyond."

And so on. One can only feel helpless, and mildly inquire how else the picture could be lighted—how the shadow was to fall upon Love unless the light were outside the frame and at the back of the figure of Death, and if we are really to accept the physical necessities of the composition as a new allegory more important than the original one?

The book is handsomely printed, and light in the hand, and the eight reproductions are very well done.

TO THE OWNERS OF THE COPIES of the *Genuine, Complete,* and *Authorized* Ninth Edition of the ENCYCLOPÆDIA BRITANNICA imported into the U. S.

All persons who have bought or inherited genuine sets of the ENCYCLOPÆDIA BRITANNICA will learn something very greatly to their advantage if they will at once communicate with us. We do not wish the names and addresses of those persons who bought sets of us, for such names we already have. Nor do we wish the names of those who have bought *pirated, garbled, imperfect,* and *mutilated* sets, and we therefore state that the mported and authorized copies bear the imprint on the title-page of Adam & Charles Black, of Edinburgh and London; or Charles Scribner & Sons, of New York; or of Samuel H. Hall, of New York. Undoubtedly many owners of the garbled and imperfect sets will write us for what we are prepared to send you, and in order to secure ourselves against them, we ask you to look on the final page of any one of your volumes, and state in your letter the name and address of the printers which you will find there. We shall then know from that name and address whether the writer has one of the genuine or one of the imperfect and pirated copies.

All persons who have the authorized ENCYCLOPÆDIA BRITANNICA, and will communicate with us at once, will learn something of great profit to themselves.

THE MACMILLAN COMPANY 66 FIFTH AVENUE NEW YORK

The Nation.

NEW YORK, THURSDAY, JUNE 19, 1902.

The Week.

General Wood was, of course, bound to stand by his action in taking thousands of dollars from the Cuban treasury and giving the money to an American advocate of reciprocity legislation, but he does not mend matters by his explanation. It was his duty, as Military Governor, he says, "to counteract the influence of the powerful Oxnard lobby." What General Wood apparently does not see is, that there was a proper and an improper way of "presenting the case of Cuba and her economic needs to the American people," and that he had no right to use both. He should have told Congress and the country officially, as he did, that the prosperity of Cuba depended upon reciprocity with the United States, but he had no business to go a step further and try "fighting fire with fire." The best proof that it was wrong to use Cuban funds for this purpose is the fact that the matter was kept secret because it was felt that it would hurt the cause of reciprocity—as it plainly has done—if the truth should become known. A fight for a principle is not to be won by opposing a lobby with the weapons of the lobbyist. Congress ought still to pass some measure granting reciprocity, because this is our plain duty, and because our Government is virtually pledged to it. The plea for reciprocity is addressed to the moral sense of the nation, and it is in no wise affected by any wrong which may have been committed in advocating it. The Cubans are not to blame for the poor judgment of their Military Governor, and their interests should not be prejudiced by his mistakes in trying to help them. The incident throws a flood of light on the conditions of military administration of dependencies.

There is no precedent, so far as we can recall, for the endorsement of a President for a second term by conventions of his party meeting more than two years before the next election of the Federal Executive is to be held. Nor was there ever before a case where a man who had been chosen Vice-President and had succeeded to the higher office through the death of his chief, was pledged such support by his party in more than one State before he had been a year in the White House. This is what has happened to Mr. Roosevelt, the Republican State conventions in both Kansas and Pennsylvania having within a fortnight declared for him as their candidate in 1904. "We pledge ourselves," so runs the explicit language of the plank adopted at Harrisburg on June 11, "to his renomination to the great office which he has filled with such ability and patriotism." The Topeka convention declared that "Kansas looks forward with joy to the coming time, but two years distant, when again her delegation, representing a united Republican party, will march under the banners bearing the inscription, 'For President, Theodore Roosevelt.'" It is a noteworthy fact that the Harrisburg pledge comes from a convention controlled by a disreputable boss who seems to get along well with the President; whereas the Republican Senator from Kansas had tried unsuccessfully to boss the party in his State, had opposed Mr. Roosevelt, and had been "turned down" by him more than once, notably in the matter of the Pension Commissionership.

Quay's shrewdness was never so strikingly demonstrated as in his selection of Judge Pennypacker of Philadelphia for nomination as Governor by the Pennsylvania Republican State Convention. "The old man" has learned wisdom during the past dozen years. In 1890 he forced upon an unwilling party the candidacy of that discredited machine politician Delamater, and thereby turned over the Governorship for four years to Pattison, who beat the Republican candidate by 16,554 votes. Eight years earlier, Pattison had also been elected through the folly of the Republican machine, which then insisted upon the nomination of Beaver, and thus provoked a revolt which resulted in the polling of nearly 44,000 votes for an independent Republican, and allowed the Democratic candidate to win by a plurality of about 40,000. This year a man quite as offensive to decent Republicans as was either Beaver in 1882 or Delamater in 1890, Attorney-General Elkin, sought the nomination, but the Senatorial boss refused his consent, and offered instead a judge of ability, high character and corresponding reputation; an historian who lately compared Pennsylvania and Massachusetts, to the disadvantage of the latter (with a bold placing of Quay to Pennsylvania's credit side). Elkin would not submit without a fight, but he could not beat his old master at the trick of packing delegations.

A platform of much better quality than usual is also provided by the Pennsylvania boss this year. The most important planks in any such deliverance are those which relate to Cuba and the Philippines. There is much less "hifalutin" in the resolutions on these questions than could have been expected. Not a word is said about "the flag staying put" in the Philippines. On the contrary, stress is laid upon the progress which has been made in developing native rule, satisfaction is expressed over the fact that "the Filipino people have been started upon the road of self-government," and the way is left open for the acceptance by the party, later on, of the policy of giving the natives independence. The plank regarding Cuba ends with this clear and explicit demand for action by a hesitating Congress:

> "We endorse the recommendation of President Roosevelt, that the United States should enter into reciprocal trade relations with the Republic of Cuba that shall be mutually advantageous to it and to the United States; and all efforts to that end of our representatives in both houses of Congress we cordially endorse."

President Roosevelt writes to the Secretary of the American Unitarian Association—which had protested against a "policy of coercion" in the Philippines, and asked the substitution of a "policy of conciliation and good will"—that there is now almost none of the coercion policy left, "because the insurrection has been so entirely overcome that, save in a very few places, peace—and with peace the 'policy of conciliation and good will'—obtains throughout the Philippines." Mr. Roosevelt says also that the bill regarding the islands which has just passed the Senate, if enacted into law, "will enable us to proceed even more rapidly and efficiently than hitherto along the lines of securing peace, prosperity, and personal liberty to the inhabitants of the Philippine Islands." Proceeding more rapidly and efficiently than hitherto signifies nothing except doing what we have done heretofore—that is, killing everything over ten, making a solitude and calling it peace; but if any bill pending in Congress looks towards personal liberty to the inhabitants of the Philippines, it is the House bill, and not the Senate measure. The latter provides only that the President shall order the taking of a census, and that thereafter the Philippine Commission shall report whether they think all or any of the islands are ready for popular representative government. The House bill provides for the election of a legislative body, fixing the time for its meeting, as well as for the choice of two delegates to our Congress. President Taft of the Philippine Commission earnestly favors these fundamental features of the House bill, and it is to be regretted that President Roosevelt in this letter did not endorse the better measure.

The cable reports great activity at the Vatican, and almost as much visiting and card-exchanging between Gov. Taft and the recognized envoys in that quarter as

is now taking place at London in connection with another event. And yet we are solemnly told that Gov. Taft's mission is not diplomacy but business. This might lead to the inquiry, What is diplomacy if it is not business? What is diplomacy for, if not for the transaction of some kind of business? It is not merely for bowing and scraping and exchanging calls. If that had been the object of Mr. Taft's visit, he would not have presented any letter outlining the business which took him to Rome. To ward off the imputation of holding diplomatic relations with the Vatican—which the American people certainly would not approve of—the point has been made that Mr. Taft's letter to the Vatican was from the Secretary of War, not from the Secretary of State. That is of no importance, however. Both Secretaries act under the orders of the President. President Grant negotiated the purchase of the island of San Domingo through an aide-de-camp, and he had a clear Constitutional right to do so. The fact is that we have entered into diplomatic relations with the Vatican. The letter of Secretary Root makes that fact perfectly clear, for if we intend to go on and expropriate the friars in the Philippines, whether the Pope agrees to it or not, then there is no reason why Gov. Taft should consult him at all. If the object of the consultation is to agree upon methods the most satisfactory, or the least distasteful, to the Pope, a consultation to that end is diplomacy.

Announcement was made last week of a combination of ship-yards embracing five on the Atlantic and one on the Pacific Coast. A statement of the plans in contemplation by the members was made by Mr. Lewis Nixon of the Elizabethport yards, and we are pleased to note that the intention is to enter into active competition with English and German builders in supplying ships for all nations. At the present time, Mr. Nixon says, "the yards of this combination have contracts for three years ahead." "Some of us," he adds, "are not content to see Asia and Latin-America going to England and Germany for their vessels, and we propose to put ourselves into shape to secure this work." There it is again. We have often said that Americans could build ships just as cheaply as foreigners, in opposition to the contention of the Commissioner of Navigation at Washington that the cost in this country was $160 per gross ton for steel ships, as against $140 per ton on the other side. We pointed out at the time that the difference cited by the Commissioner was a difference in the charge made by the shipbuilders respectively, but was not necessarily a difference in cost. It might be merely a difference in profit. Mr. Cramp's statement, made in a magazine article some years ago, pointed to that conclusion, as Mr. Nixon's statement does now. Mr. Nixon enlarges upon this theme in a truly patriotic way, and we are moved to congratulate him on his enterprise and foresight. He perhaps overestimates the needs of the United States for war-ships and big guns, but he cannot overestimate the needs of the world's commerce, and he can hardly put too high a value on the skill and resources of American designers, builders, and artisans.

In the *Nineteenth Century* for June, Mr. Edmund Robertson, Q.C., M.P., has an article on the Shipping Combine that introduces a new element into the dispute on his side of the water. The plan of the Morgan syndicate as announced was to organize a company under a charter from some American State, which company should acquire the shares of certain British and American steamship companies. The plan provided, for example, that the seven hundred and fifty shares of the Oceanic Steam Navigation Company (White Star Line) should be so acquired. These are all the shares of that company. The shares of various other British companies were to be similarly acquired, but the ships were to remain under the British flag. Now Mr. Robertson points out that, according to British law, they cannot remain under the British flag. The right of a British owner to sell his ship or his shares to a foreigner is not disputed, but the British law says that no ship shall be deemed British unless wholly owned by British subjects. It is immaterial where the ship is built or what is the nationality of her crew, but the ownership of a British vessel must be British. "If an unqualified person," says the Merchant Shipping Act, "acquires as owner, otherwise than by such transmission as hereinbefore provided for, an interest either legal or beneficial in a ship using a British flag and assuming the British character, that interest shall be subject to forfeiture under this act." Transfers to foreigners without the intention to retain the British character are legal, but other transfers simply forfeit the registry. If Mr. Robertson is right in his contention, the question becomes important, what flag the British-built ships of the Morgan combine will carry. They cannot remain under the British flag, because they are not owned by Britons. They cannot come under the American flag, because they were not built in the United States.

Vice-Chancellor Emery's decision against the Steel Corporation, in the New Jersey suit to prevent the company from converting $200,000,000 preferred stock into bonds, perhaps caused the more surprise because of Judge Lacombe's contrary decision, exactly a week before, in New York city. But the New York suit was brought in a Federal court, and the question on which Judge Lacombe had to rule was the argument that such conversion was unconstitutional. Issue and sale of the preferred stock, the applicants contended, established a contract in perpetuity for the maintenance of existing relations between corporation and shareholder. To alter such relations, in the face of protest by any shareholder, violated such a contract; therefore, it was alleged, both the conversion plan and the law which authorized it must be repugnant to the Federal Constitution. Judge Lacombe thought otherwise, ruling distinctly that "permanency in the relative proportions of the different securities was no part of the contract." The ground of the New Jersey suit is different, and the Vice-Chancellor's decision does not, therefore, contravene Judge Lacombe. It follows very broad lines of equity. It sweeps aside all question of a contract, goes behind the outward form of exchange of bonds for shares, and defines the proposed operation as a distribution of assets to shareholders. Such distribution, if permissible under the present circumstances—and the court does not say it is—must be absolutely made *pro rata*. If the company chooses to stipulate such conditions as surrender of shares in exchange for the credit assets distributed, it must see to it that all shareholders assent to the condition. If any shareholder refuses such assent, the company nevertheless must hold itself ready to provide him his due proportion. It cannot transfer to any other person the proportional right in question. But the Steel Trust's conversion plan explicitly provides that in case the offer "shall not be accepted by holders of preferred stock to the full extent of $250,000,000 bonds," the company shall then issue to the banking syndicate, in exchange for preferred stock and cash, upon the same terms, the bonds not accepted by any shareholder.

As a landmark in American public finance, the fact is interesting that outstanding gold certificates have, for the first time in our history, reached a total equal to outstanding United States notes. Since the Act of May 31, 1878, stopping the cancellation of legal tenders, the amount outstanding has remained fixed at $346,861,016. On June 10, Treasury certificates issued against the deposit of gold with the Government, and circulating as money, showed an aggregate of $347,021,089. Comparisons have been made at Washington with the opening months of 1895, when the country's gold fund reached low level. Not the least curious among these comparisons is that as to outstanding gold certificates. As against the very large total just referred to, there were afloat on February 1, 1895, only $52,985,000. The immense increase since that time, however, is perfectly comprehensible. Within the seven subsequent years, the esti-

mated increase in this country's total money circulation has been $640,000,000, which has hardly been in excess of the normal demands of expanding trade. Such an increase could not have come from the legal-tender notes. The old greenbacks were limited in amount, and the Treasury notes of 1890 have actually been reduced, since 1900, though with an equivalent issue in silver dollars or certificates. National banknotes are, it is true, some $150,000,000 larger in amount than when 1895 began; but these are now decreasing. Therefore the needs for increased currency supplies have been filled from the gold markets of the world, and the gold has passed into circulation in the form of certificates. At the present date, 41 per cent. of the country's estimated circulation is in the form of gold.

Although there has been little in Connecticut politics for months other than the question of reform in legislative representation, when the subject was submitted concretely to the electors on Monday, in the adoption or rejection of the new Constitution, much apathy was shown. This may have been due, in part, to the fact that there was little in the document to invite support. But, on the other hand, its adoption would have continued indefinitely the present inequitable system of representation, and would have placed serious obstacles in the path of Constitutional reform. It is surprising, therefore, that the cities did not cast a larger vote in opposition. For the opportunity of reform yet afforded them by the rejection of the Constitution they are largely indebted to the selfish voters in the little towns, who were influenced either by their resentment over the larger representation grudgingly granted to the cities by the Constitutional Convention, or by the fact that under the plan proposed they would lose one of their two Representatives.

When Mr. Chamberlain seems to be blinding all eyes with his schemes for Imperial Federation—incidentally evading the criticism of sundry dubious past deeds—it is gratifying to find in an influential Canadian journal a disposition to examine the whole matter coldly, in the light of reason. The Toronto *Globe*, the chief organ of Liberal opinion, while not unfriendly to the idea of an Imperial Zollverein, still sees the great difficulties in the way, and suggests caution in counsel. Politically, it remarks, a tariff union must offend all English free-traders and many colonial protectionists. Mr. Borden, the Canadian Minister of War, who is now in London, appears to be of the same mind, as he virtually rebuked an over-zealous fellow-countryman last week for his tariff-union activities. The more far-sighted of the Canadian Liberals see clearly that this proposed tariff union must preclude reciprocal arrangements with other countries. In a period of prosperity, Canada may not feel the pressure of the present disadvantageous tariff relations with the United States and Germany, but prosperity cannot last for ever, and a year of crop failures would show Canada the folly of limiting her markets. Sir Wilfrid Laurier undoubtedly is a convinced Imperialist, but he will hardly put the commercial policy of the Dominion in the hands of a brilliant Colonial Secretary with a past to retrieve.

The seriousness of the situation is not fully grasped, even in London, and Washington is completely indifferent to a matter of the highest concern. Mr. Chamberlain has so often played Imperial Federation as a matter of temporary expediency that it is hard to realize not only that he is committed at last to his own doctrine, but that he has brought over an unwilling Ministry to his project. On no other ground can we account for the failure to strike the corn tax from the war schedule. There is undoubtedly danger that Great Britain may be dragged out of her position of light and leading into the confusion of tariff warfare. We need hardly say that our farmers would feel very quickly the effect of a preferential on colonial wheat, and it is strange that even the protectionists do not take every step to avert such a discrimination. If it should be asked how Congress at Washington can influence Mr. Chamberlain and the colonial premiers in conference, the answer flies to meet the question: Negotiate promptly a reasonable reciprocity treaty with Canada. The Canadians desire it, for their possible English market is small compared with what their American market might be. And certainly our grain-growers will see that no importation of Canadian grain can hit them so hard as the restriction of the British market would. Mr. Chamberlain's scheme may, of course, break of its own unwieldiness—we trust it will; but Congress could at any moment put a spoke in the Zollverein wheel, to the great advantage of both Canada and the United States. Here is an opportunity for the Democrats and for the enlightened Republicans who follow Congressman Babcock.

If the Irish Nationalists are never so happy as when they are unhappy, they must be in a quite ecstatic mood just now, with troubles thickening upon them as they are. In addition to "proclaiming" the United Irish League, the Government has set on foot a legal process to restrain the agitation for compulsory expropriation of Irish landlords. The weapon selected is a writ of injunction against the Nationalist leaders. By means of it the hope is that every orator and agitator may be held in contempt of court, with imprisonment and ruinous fines and the liability to have all his papers attached staring him in the face. This would be "government by injunction" with a vengeance. It may succeed, though, if it does, it will be the first time that a policy of repression and coercion in Ireland has accomplished anything but the firmer union of the people in a more passionate hatred of English rule. Already the Nationalists are accepting the challenge and flaming against the Government. "We shall have stirring times at the coronation," says Mr. John Redmond exultantly. It certainly seems a pity that the pacification of the Boers should have come in time for the ceremony, but only to emphasize the inextinguishable bitterness of a nation at England's door. The revival of Irish clamor and of Irish hate at this time is only one melancholy illustration more of the failure of that English policy in Ireland which even so stout a Tory as Coleridge called one long record of imbecility and weakness.

The impressive majority by which the French Chamber of Deputies sustained the new Premier on Thursday—the vote was 329 to 124—is no sign that his programme of tax reform will have effectual support. Naturally the groups which have agreed upon the selection of a Prime Minister may be counted upon to give him at least one formal vote; no one but the Duc de Broglie, we believe, has been so unlucky as to be voted down at the first session of a new Parliament. It was the oratory of M. Jaurès which gave distinction to the otherwise conventional debate of Thursday. His declaration that *revanche* for Alsace-Lorraine is now a counsel of folly expressed what the more thoughtful in France feel, but dare not say. His demonstration that the Franco-Russian alliance promises not the restoration of lost territory, but the maintenance of the *status quo*, was illuminating. Many who by no means follow Jaurès in his theory of disarmament, will begin to question the value of a formidable alliance that only guarantees a *status quo* which is nowhere threatened. It was his speech which gave significance to a session otherwise devoted to safe Ministerial promises of economy and tax reform. His obvious friendliness to the new Radical Ministry may be taken as a sign that Premier Combes may, for the present at least, reckon upon the support of the Parliamentary Socialists, M. Waldeck-Rousseau's faithful allies. But of course the test of the new Government, which starts out auspiciously, will come when it presents, or fails to present, its promised progressive income tax. Majorities as large as M. Combes's first have melted away with amazing rapidity.

"TEACHING THE PRESIDENT A LESSON."

All the Washington dispatches agree that the President has addressed himself to Congress in vain, and that Cuban reciprocity is beaten. His special message has only intensified existing antagonisms, and widened instead of closing the breach in his own party. His outspoken enemies within the Republican ranks had already burned their bridges behind them, and continue defiant; his half-hearted supporters are more than ever reeds shaken in the wind. Thus, in spite of Republican pledge and boast, and notwithstanding the President's bold summons, there is every indication, as we go to press, that Congress will adjourn without lifting a finger in aid of Cuba.

This effect defective comes by cause, and what that cause is, the Washington politicians take no pains to conceal. They have used the Cuban business simply as a convenient club with which to punish the President. As a leading Republican of the House explains the case, "We have had to teach Mr. Roosevelt a lesson." That is to say, they did not love Cuba less, but disliked the President more. In his Cuban policy he could be easiest thwarted and humiliated, and their accumulated rancor and resentment they decided to glut in defeating him on that battle-field. That, we firmly believe, is the true explanation of his failure. He had affronted the most powerful managers of his party. They have not liked his ways, they have determined to blight his political prospects, and so, by means of the Cuban question, have undertaken to set him the "lesson" that no President who ventures to assert his independence of the politicians can get any favors from Congress, or hope for a renomination. That is the real political significance of the Cuban fiasco.

Few people not in close touch with affairs at Washington have known how large is the number of Congressmen hugging secret grievances against President Roosevelt. In public, of course, they have spoken as his supporters; but those behind the scenes have understood that it was but another case of Pitt and the great nobles. "They supported him," writes Lord Rosebery, "on their necks, for his foot was there." Mr. Roosevelt has heaped up slights to members of Congress—or what they consider slights. They have long regarded themselves as a privileged guild. Theirs it was to name public officers, to determine party policy, to make patronage wash legislation as one hand washes another; and there were certain rules of the political game, as it was played between the Capitol and the White House, which they had come to think of as possessing the force of imprescriptible law. But President Roosevelt has not observed those rules. He has been horribly irregular. He has appointed men to office without first consulting Representatives and Senators. In endless instances he has rejected their recommendations. Their sensibilities he has ruffled, their arrogance he has given cold douches. He has done it smilingly, even hilariously, as if he thought that was just the sort of thing they would like. But they have not liked it, and they have silently bided their time. In the Cuban imbroglio they saw their great opportunity, and are now chuckling with delight to think how they have utilized it to make him know his place. They have, they say, sent the young man to school.

To be entirely frank, we think that there were certain "lessons" which the President needed to be taught in this Cuban affair. One of them was that he had entirely underestimated the cohesive power of the protectionist system of public plunder. He asserted in his off-hand way that a reduction in the duties on Cuban products had nothing to do with tariff revision. He thought he could throw cold water on all other reciprocity treaties, and still obtain Cuban reciprocity. That was the great mistake of his annual message to Congress. It was but a jaunty view of the situation which he then took. He should be wiser now. He has been taught that a protective tariff is only a system of balancing one selfish interest against another; that each one thinks it has a vested right to its own share of the spoils; and that it will rage like a bear robbed of its whelps against all the others if they dare to touch the part of the law written for its benefit. To talk of "honor" to men with such an idea of their protectionist booty well in hand, was to use to them an unknown language. This is a truth which, we may presume, the President has now learned in the dear school of experience.

The other lesson which the events of the past six months should have enabled him to master is, the true secret of his political power. Whenever he has tried to be "practical," he has failed. Roosevelt as a practical man always reminds us of Disraeli's definition of the practical man—the one who practises the errors of his predecessors. In that way he does not get on a step. When he diplomatically puts himself into the hands of the politicians, the invariable result is their triumph and his own undoing. This fact glares at one from his Cuban experience. For six months he has been dealt with insincerely by his Congressional advisers. They have cheated him throughout with false promises. They tricked him into believing that his wisest course was to trust to them, and not appeal over their heads to the people. When it was too late, when the psychological moment for a Cuban message was long past, he did, indeed, come out in an appeal to the country. But, alas, he found it jaded with the long discussions and delays, the summer break-up already upon it, and the adjournment of Congress obviously near, and he got but a feeble response compared with that which would have echoed through the land had he spoken out three months ago. Not in such secret negotiations, in such bartering, and bargaining, and being "diplomatic," lies the hiding of Roosevelt's power, but in clear honesty, in dauntless courage, and in flouting of the boss while going direct to the people.

Every one can see that the present crisis is big with the political fate of President Roosevelt. His defeat in the Cuban matter has been brought about by political managers who are hostile to him in their hearts, and who are determined to prevent his renomination. If he falters, or compromises with them, he is lost. But he can beat them all if he remains "unshaken, unseduced, unterrified," another Abdiel. The politicians are teaching the country a lesson, as well as the President. People see how the bosses are quietly endeavoring to monopolize all forms of the political activity of the nation. From primary to Cabinet their ambition runs, as they would have their power extend. This conditions of things the majority of Americans look upon with loathing. The system is fairly forcing the people out of doors to become statesmen, as was said of the English Conservatives. But a leader is necessary in the revolt against the tyranny of the machine, and if President Roosevelt chose to fling himself upon the popular sympathies and support, and assert the right of the people to govern themselves without consulting the bosses, he could make himself strong enough to defy the confederated politicians.

THE STRIKE UNVEILED.

Sooner than could have been expected, the President's inquiry, through Labor Commissioner Wright, into the causes of the coal strike, has borne fruit. It has given us the correspondence between the operators and the miners, previous to the strike. This yields more light on the controversy than the public has before had. It makes clear the attitude of both employers and men. What the latter demanded, and the reasons the former gave for refusing to grant it, we now know for the first time. All doubt as to the merits of the dispute, or as to the one way in which it can be settled, is removed by the letters made public on June 11. We have at last a breath of wholesome publicity, and its value is instantly apparent.

Why the correspondence had been kept back so long, we can only guess. President Mitchell expresses his surprise, if not pain, at the action of the operators in publishing it, and almost intimates a breach of good faith. But if it all was certain to reach the pub-

lic, in the end, by means of a report to President Roosevelt, it is just as well to cut short the process and let us have the documents at once. In them any one can see reasons why both sides should have felt a little reluctance to make the facts public. We see the operators admitting a past blunder, and determined now to retrieve it, if possible —at any rate, not to repeat it. We discover the miners taking a most unreasonable position, and coolly proposing in private to mulct the dear public to which they were only appealing for sympathy. There was this awkwardness for either party in publicity; and that fact, together with a secret hope of a secret settlement, may have led to the steady befogging of the public in the whole affair. But a west wind has now blown away the fog, and the actual situation lies plain to every eye.

First, we note the tacit confession of the operators. It lies implicitly in their argument against doing now what they practically did in 1900. They point out the absurdity of trying to assimilate conditions in anthracite mines to those in the bituminous field; they show how the different mines in the hard-coal region present such differing problems that a uniform rate of wages among them all is impossible; they assert that an agreement on a wage scale for a year is unbusinesslike; they resent union dictation, and say they must be allowed to manage their own affairs. Very good; but in 1900, under political pressure in a Presidential campaign, they assented to every one of these particulars. In other words, they then allowed the camel's head to be inserted, and they now have to fight desperately to prevent the animal from occupying the whole tent, or else knocking it flat over their heads.

The arguments which the operators give for retracing their steps are certainly conclusive. In 1900 they increased wages 10 per cent., but their books show that the result was a diminished efficiency on the part of the miners of 12 per cent., on the average. This year the demand was for a further increase of 20 per cent. in wages. The owners might well be staggered if this portended a further decrease in efficiency of 24 per cent., reckoning the amount of coal mined per man. Saying nothing about this, they offered President Mitchell, as they offer Commissioner Wright, free access to their books to prove that they could not advance wages with coal at its present selling price.

What was the secret answer of the labor leader to this? Why, a cool urging of the operators to raise the price of coal to a figure which would make up the difference! He was told, in other words, that the owners found the union miners very idle and arrogant and wasteful and unproductive; they did not keep to their contracts, they did not obey the law of Pennsylvania, they did not mine coal as they should. Very well, was President Mitchell's calm reply, raise the price of coal to the public, and then you can afford to pay the increased wages we demand. The best comment on this is a story told the other day by Sir Henry Campbell-Bannerman, recounting the advice given by an Englishman, a Scotchman, and an Irishman respectively to a gentleman whose servant was constantly breaking articles in the household. The Englishman, in his blunt, honest way, said to the employer, "Oh, get rid of him—dismiss him." The Scotchman's advice was, "Stop the money out of his wages." "But," said the master, "he breaks more than his wages amount to." "Then," said the Irishman, "raise his wages."

The operators do not fail to point out another reason why wages cannot be raised, with the effect of increasing the price of anthracite. The coal has to be sold in competition with bituminous. The latter, is, in fact, encroaching all the time upon the market for hard coal, and would instantly profit by any further advantage in comparative price. It should not have been necessary to tell this to President Mitchell, as he is a bituminous miner, and represents a union primarily of workers in the soft-coal fields. This is one absurdity of his union—it attempts to combine miners of different products in severe competition. But it is pretty evident that he cared for none of these things. His strike was not an economic movement, but one half-political, half-sentimental. He evidently thought to repeat his success of 1900, when Senator Hanna came to his rescue. But the Chairman of the Republican National Committee in a Presidential year, and the leading spirit of the Civic Federation now, are two very different men. Political pressure could not be applied in 1902 as it was two years ago. President Mitchell's reckoning upon that influence went wrong.

Nor does it seem that his offer of arbitration was much better conceived. It has, indeed, an air of shrewdness to propose to leave all questions to Archbishop Ireland and Bishop Potter, with a third man to be named by them, but it can scarcely impose upon practical people. Arbitrators must know something about the thing to be arbitrated. We have always wished that the operators could have seen their way to refer the controversy to a competent and impartial arbitration; but if none such was suggested, and if, as would appear to be the case, the chief thing in dispute was the demand of a heterogeneous labor union, not able to control its own men and confessedly wasteful and inefficient, to be allowed further to take the management of the coal business out of the hands of the operators, and make the consuming public foot the bill—we do not see how arbitration could well apply. A foolish strike can be settled only by the foolish strikers going back to work. We look to see that result greatly hastened by the revelation to the public of the indefensible nature of the position taken by the miners.

AN INVESTIGATION ON THE SPOT.

A petition was presented in the House on Thursday by Mr. McCall of Massachusetts, asking that Congress send a committee of its own members to the Philippine Islands, to make an investigation on the spot of the needs of the islands and of the duties of the United States in reference to them. The petition was signed by Charles Francis Adams, Andrew Carnegie, Carl Schurz, Edwin Burritt Smith, and Herbert Welsh as a committee of the Anti-Imperialist Leagues of the United States.

The reasons assigned for such an investigation are overwhelmingly strong. The strongest of all is the fact that there are fundamental differences between the civil and the military authorities as to what ought to be done or permitted in the way of self-government in the islands, and these differences have found expression in the opposing bills now pending in Congress. Gov. Taft and Acting Governor Wright desire to have a legislative assembly elected by the people without delay, and vested with certain powers of self-government, including the sending of commissioners to the United States. Their views have been embodied in a bill reported to the House by the Committee on Insular Affairs. The Lodge bill, which has passed the Senate, is based upon different ideas. It proposes to continue the present régime indefinitely. Probably the House will maintain its own bill against that of the Senate, and then there will be conference committees, of which some compromise measure will be the issue. The fact that such grave differences exist among the authorities of the islands, and in Congress itself, is a sufficient reason, if there were no other, for an investigation on the spot.

There are other reasons, however, for such an investigation. We have never had a coroner's inquest on any of the victims of torture and assassination in the islands. We have had courts-martial, but never a trial by jury of the vicinage. The facts which have reached us from time to time, and which are still coming, have been distorted by distance and by attempted concealment. The Filipinos have had no representation. The testimony of Sixto Lopez was refused by the Senate Investigating Committee, although he was here in person. Is it not time to give a hearing to the people who are most interested in the government of the Philippines? Have not the American people also an interest in learning the truth? And how can the truth be learned except by hearing both sides?

When the first reports of torture and murder leaked out at Washington, they evoked a cry of horror from all parts of the country, and President Roosevelt echoed the common feeling when he sent his dispatch to Gen. Chaffee, in which he declared that nothing would be held to excuse the infliction of torture by American soldiers. It really looked as though something would be done in the way of punishing the guilty, of preventing outrages, and especially of stopping the suppression of the facts. But the reformation was short-lived. A counter-cry was started, that those who accused Waller and Smith of barbarity were "attacking the army." They were starting "a fire in the rear" of our boys in blue. According to this theory, anybody who wore the blue could do anything he liked *except* complain against another boy in blue.

If Waller gave an order to massacre his baggage-carriers, he was the army; but the subordinate officer who protested against the order—what or who was he? Was he attacking the army when he said that it would be an act of wanton cruelty to shoot these men? When the court-martial found Lieut. Preston Brown guilty of shooting an unarmed prisoner in his custody, and sentenced him to five years at hard labor in the penitentiary, were the officers of this court attacking the army? If they were not, how could it be said that anybody else who disapproved of the acts of Lieut. Brown and his kind was attacking the army? Yet this counter-cry had a considerable effect on the minds of Republicans, who feared that their party would lose ground by reason of the barbarities practised upon a distant people who were struggling for liberty, and who had never harmed or offended us.

That there is a chapter of horrors in those islands yet uncovered there is too much reason to believe, since new cases are coming to light almost daily. A few days ago the report of Capt. West (hitherto suppressed) on charges of cruelty preferred against Lieut. Arnold of Iowa came out accidentally. On Tuesday week came a report from Manila, where another court-martial was "attacking the army" by accusing Major Glenn and Lieut. Gaujot of cruelty in administering the water cure to Filipinos. It is another step in our Rake's Progress that Major Glenn treated the affair jauntily, and contended that the water cure was not painful. Why he should take the trouble to administer it if it were not painful he did not explain, but his counsel offered to prove that the water cure was a common practice in New York when Theodore Roosevelt was a Police Commissioner. This lie was properly excluded. Lieut. Gaujot, the dispatch says, "offered no defence; he admitted that he had administered the water cure to three priests." On Thursday the testimony of Mark H. Evans, formerly of the Thirty-second Volunteer Infantry, was taken by the Senate Committee. He "attacked the army" by testifying to seeing the water cure administered in the Province of Batan; also to the burning of villages where insurgents were located. He also related incidents where natives were ducked under water for half a minute at a time, to compel them to tell where arms were concealed.

If there were no other reason for an investigation on the spot, the fact that all the testimony obtainable from the War Department on this subject leaks out by chance, or has to be dragged out by main strength, would itself be ample.

A CURB FOR "PETTY BOSSES."

The threatened withdrawal of Congressman Burton of Cleveland, in resentment at the interference with his campaign by some of Hanna's office-holders, appears to have been averted. It is said that the trouble has been compromised. But before it is forgotten, the occasion should be seized to point out the fact that the meddling of Federal officials in party politics has again become a vice in our public service, requiring the attention of the President. Mr. Burton's case shows the lengths which the evil has run. His disgust was so great at the arrogance of what he calls the "petty bosses" who hold the Federal offices in Cleveland, that he proposed not to stand for Congress again. This would have meant the loss to his party not only of a valuable Representative, but very likely of a seat in the House. The difficulty has been patched up, the dispatches say, but the time is evidently coming when President Roosevelt will have to issue an order defining and curbing the partisan activities of Federal office-holders.

Few realize how insidiously this mischief reared its head anew during President McKinley's term of office. Under the shadow of his benevolent indifference, postmasters and collectors resumed their old habits of running conventions and managing campaigns. Van Cott and Bidwell in this city, for example, figured as district leaders and county committeemen, just as if we were still in the mire of the spoils system. The old Executive prohibitions were allowed to lapse; and how naturally the office-holders took up again the notion that their first duty was to the party machine, we see by the Cleveland episode. Congressman Burton's protest ought to bring it smartly home to the President that the hour for rebuking and suppressing this pernicious practice has arrived.

We are the more emboldened to hope that he will take prompt and effective action when we remember how properly and resolutely he has exerted his authority in the case of other Federal employees. There was Funston. He came home with voluble and indecent out cries against public men and newspapers in this country that dared to "talk" about the Philippines. There was far too much talking, he vociferated. "Right you are," said the President swiftly, "as far as army officers are concerned; so you will kindly hold your peace from this time forth." Then we have the more recent case of the clerk in the War Department who was dismissed for writing letters to the press over her own name, reflecting upon the President. That could not be tolerated. It was insubordination. But what we maintain is that the impropriety was no greater, the injury to the public service no more evident, the demand for Executive intervention no more imperative, than in the case of Federal office-holders who undertake to run errands and do dirty work for party bosses.

One glance backward will show from what moorings the Federal service has been allowed slowly to drift. President Hayes issued a civil-service order in 1877 in which he said: "No officer [of the general Government] should be required or permitted to take part in the management of political organizations, caucuses, conventions, or political campaigns." That was definite, and laid down the correct principle. It had, too, an immediate effect, though later on the order was not rigidly enforced. President Cleveland's order of July 19, 1886, was more vague, unfortunately, using the elastic term "pernicious activity." But the end he aimed at was explicitly stated by him in the cases of the removed District Attorneys, in November of that year: it was the suppression of "the use of official influence in political campaigns," together with the "avoiding any pretence of control over the political action of others by reason of official place." In general, Mr. Cleveland held that "active partisan service" was improper in a Federal office-holder. Certainly the practical effect of his attitude and his orders was to free us from such scandals as we have seen under the present régime in Manhattan and in Brooklyn, and as have come to the surface so sensationally in Cleveland. Mr. Roosevelt should not let the opportunity slip to strike a good blow for reform, and to check a swelling evil, by letting it be known what the standard is which he believes in and up to which he will compel his subordinates to live. He cannot do better than to reaffirm the order of President Hayes. That was precise as well as comprehensive, and, by making the test the definite one of having any share in party management, puts it in the power of both office-holder and public to know exactly what is forbidden.

Of course, there will be grieved protests from the "petty bosses," and from the bigger animals on whose backs they

ride, that this would be to interfere with the "political rights" of American citizens. But the office-holder is under bonds which do not fetter the average citizen. He must, as we have seen in the War Department instance, refrain from public criticism of his superiors. If that is insubordination, properly to be punished, if the Funston gag was warranted, then it is no hardship on the general run of Federal office-holders to compel them to stick to their official duties and let politics alone. Their alleged right to pack a caucus and dictate a nomination they surrendered when they took office; just as truly as a clergyman surrenders his right to teach in opposition to the views of the church to whose creed he subscribes, or a professor to work against the peace of a college in which he holds a chair. The answer in all cases is the same—if you want unlimited rights, resign your office, your pulpit, your professorship. In office, it is service of the public, not of party, that is required. These would-be bosses, these political busybodies and intriguers and stirrers up of strife, take far too high a view of themselves. Their true category is simply that where Canning placed the tide-waiters of his day,

> "Each a gentleman at large,
> Fed and lodged at public charge."

As such, their pretence of a right to sway party counsels and dictate party action is preposterous. They need to be bitted and bridled, and President Roosevelt is just the horseman, we think, to do the job.

STATE BANKS AND BANKING LAWS

According to the last report of the Comptroller of the Currency, there were 5,204 banks in the United States organized under State authority, exclusive of loan and trust companies, savings banks, and private banks. The number of national banks at the same time was 4,279. The reports of the condition of State banks, available at the Comptroller's office, were not complete. The aggregate capital of the 4,983 banks reporting was $255,000,000. That of the national banks was $663,000,000, or nearly three times as much.

Why should there be any State banks at all when the national system is so easy of access and affords to its members such advantages in the way of prestige and public confidence? Chiefly because the smallest capital permitted to a national bank is $25,000. The requirements of State laws as to capital are various. Ten States leave the amount of capital wholly to the discretion of the bankers. Virginia requires a capital of at least $500 for any incorporated company, and does not make a distinction between banking and other companies. Generally, the capital requirements of the States are less than those of the national law, and this fact chiefly accounts for the existence of State banks. For the most part, they are the banks of the small towns, in the Middle, Southern, Western, and Pacific States—generally towns where the capital employed is less than $25,000 to each bank. Another reason for the existence of State banks is that in most States they are allowed to lend money on landed security, whereas national banks cannot. In California more than one-third of the loans of banks incorporated under the State law are secured by real estate.

As there are forty-eight Legislatures, including those of the Territories, a great variety of bank legislation is possible, but its extent and scope could hardly be imagined without such a guide as has been supplied to us in a recent monograph of 117 pages by Mr. George E. Barnett of the Johns Hopkins University, published by the press of that institution. Mr. Barnett has here found a neglected field. It was well worth study, in both its legal and its economical aspects, and the author has shown himself well qualified for his task. The diversities of legislation respecting incorporation, capital, real-estate loans, stockholders' liability, and public supervision are carefully traced, and the judicial decisions based upon them pointed out.

It is curious to note that both North Dakota and South Dakota have laws requiring all persons doing a banking business to become incorporated, and that the highest court of the former State held the law to be a proper exercise of the police power, while the corresponding tribunal of the latter declared it to be an infringement of the common rights of the citizen, and hence as unconstitutional as it would be to prohibit men from being carpenters or gardeners unless they were incorporated. The South Dakota court held that banking without the note-issuing function is not a franchise, but a right at common law. This is a sound judgment, but if one goes back far enough in past history, he will find that it was originally a common-law right even when accompanied with the function of note issue. The Bank of New York existed and did a regular banking business, including the issue of circulating notes, for eight years before it was incorporated, and its right to do so was not questioned. Going still further back, it was held by the Privy Council that private individuals in the American colonies had the right to issue notes to circulate as money, if people were willing to take them. In fact, many such notes did so circulate in the eighteenth century in the province of Massachusetts Bay.

Side by side with the 5,204 State banks there are (or were in 1899) 4,168 private banks. Private banks are of two kinds: (1) as an adjunct to brokerage, or dealing in foreign exchange, in the large cities; (2) as a means of furnishing credit in communities smaller than those which support either national or State banks. Of the former kind the houses of J. P. Morgan & Co. and Brown Brothers are familiar types. In the large cities these are as important as any class of banks. They make loans, and they receive deposits, and sometimes they pay interest on deposits, but their business is mainly conducted on lines different from that of the ordinary commercial bank. The second kind of private banks are identical in character with the State banks. The only difference is in the fact that the latter are incorporated, and thus subjected to whatever laws exist in their respective States providing for examination and publication of reports. In order to extend and enforce such supervision, there has been a tendency in State legislation during recent years to require private banks to become incorporated, and to reduce the limit of capitalization for this purpose. Thus, if a State fixes the limit of $15,000 as the smallest amount of capital for an incorporated bank, and if the Legislature wishes to compel all banks to be incorporated, it commonly lowers the limit to the capital of the smallest existing private bank. Three States, however (North Carolina, New Jersey, and Wisconsin) accomplish the same end in a direct manner. They require all private banks to be examined and to make reports in the same way as incorporated banks.

Mr. Barnett finds that the right of note issue has had little influence in bringing State banks into the national system. When the National Bank Act was amended in 1900 by lowering the capital limit to $25,000, allowing the issue of notes to the par value of the bonds, reducing the tax on circulation one-half, and supplying a 2 per cent. bond upon which the premium was relatively small, it was supposed that most, if not all, of the State banks of $25,000 capital would come into the national system. The result did not correspond to this expectation. In States like the Dakotas, where the national banking system was the prevailing and popular one, the opportunity was generally availed of, not for the purpose of issuing circulating notes, but in order to be in the fashion. In other States, like Michigan, Missouri, and California, where more than 500 State banks existed, and where that system was the predominating one, only twenty-seven new national banks have been formed. The State system prevailed in the South, also, except in Texas, whose Constitution prohibits the granting of bank charters altogether. The same result followed in the South; hardly any addition to the national system came from the change in the national law. Mr. Barnett thinks that the advantages, if any, offered by

note-issuing under the national system are offset by the prohibition of loans on real estate under the national law. He thinks, also, that the permission to lend on real estate will give an increasing advantage to State banks in the trans-Missouri States, as well as in the South, as these States become less dependent on long-mortgage loans from the East. The growth of State banking will then be shown in the enlarged capital of existing banks there rather than in the multiplication of new ones.

THE CONCIERGERIE.

PARIS, June 4, 1902.

The French capital bears on its arms a ship with the motto, "Fluctuat nec mergitur." The city was built at first on an island which separates two arms of the Seine. It is extending every year, every day, in all directions; its progress will sooner or later break the line of fortifications built against invasion in the days of Louis Philippe; and it has recently been decided that that part of the fortifications which separates western Paris from the Bois de Boulogne shall be demolished, as the protection of Mont Valérien is deemed sufficient in that direction. The island of Lutetia, however, still remains the centre and heart of Paris; and nothing can vie, in our admiration, with the congeries of monuments to be seen from the bridges of the Seine, from Notre Dame to the Louvre, the Sainte-Chapelle, the Palais, the Conciergerie, the Châtelet.

There is a whole literature of this ancient Paris; there is also a valuable collection of all its aspects. Some collectors devote themselves entirely to Paris, and are the devotees of the capital. I have just noticed an interesting volume on the 'Conciergerie du Palais de Paris,' which traces the history of this striking monument from the year 1031 to the year 1901. The author of the volume, M. Eugène Pottet, writes:

"For twenty years, and several times a day, we have passed this old monument, with its pointed and black towers, which forms a part of the Palais de Justice, and is still commonly called the Conciergerie. All Paris knows at least the outside of this antique prison, whose gloomy appearance strikes the passer-by who goes along the Pont-Neuf, the Pont au Change, or who follows the quays opposite the Châtelet. It is chiefly thus, on a clear night and from the Quay de la Mégisserie, that the old edifice shows its majestic outline and its terrible beauty."

The Conciergerie is the oldest prison in Paris, and is an annex of the Palais de Justice, which shows in its irregular buildings every order of architecture. What is still called the Palace began to be occupied by the Capetian Kings. It was rebuilt by King Robert II., and enlarged by Saint Louis, to whom are attributed the vaulted rooms under the large hall of the Palace, called *Salle des pas perdus*, where you may every day see lawyers and judges in their gowns walking with their clients. One of these rooms is still called Salle Saint-Louis; another goes under the name of the Kitchen of Saint Louis. The Sainte-Chapelle was constructed by Louis IX.; it is a jewel of Gothic art, and has been compared to a reliquary. All visitors to Paris admire it. The Square Tower which makes the corner of the Quay de l'Horloge, bears on one of its walls a very remarkable immense clock, which has been often repaired. Its latest decoration is very rich, and one can see in it the initials of Henri II., of Diane de Poitiers, and of Henri III. It was in allusion to Henri III. that the poet Passerat wrote this inscription:

"Qui dedit ante duas, triplicem dabit ille coronam."

The two statues on each side of the clock are by the celebrated Germain Pilon, and represent Force and Justice.

The Palais, constructed and rebuilt at various periods, is wanting in harmony, but its complexity is easily explained by the numerous objects for which it was destined. Justice was administered in some parts; in others there were places of recreation for the people, theatres in which the Mysteries of the Middle Ages were played. The Fronde made it the centre of its agitations. The Parlements met in it, and afterwards the Revolutionary Tribunal sat in it. The solemn opening of the Parlement took place, after a two months' vacation, on the day following St. Martin's Day. At an altar, which was placed in the Grande Salle, was celebrated a mass which was called the Mass of the Holy Spirit—or the Red Mass, because the President and the counsellors wore red gowns. To this day the Red Mass is celebrated at the opening of the courts, but in the Sainte-Chapelle.

What is most striking in the general aspect of the Conciergerie on the quay is its towers. One, called Cæsar's, is where Ravaillac and Lacenaire were shut up. Queen Blanche is said to have inhabited another, called the Silver Tower, inasmuch as it once contained the King's treasury. A third, heavier than the others, has been called the Tower of Bon-Bec and also the Bavarde. It was used for torture, as Ravaillac and Damiens experienced. Some other towers were demolished; one of them disappeared, in 1871, in the fires lighted by the Commune.

We cannot go, as M. Pottet does, into an elaborate description of the endless passages, the prisons, the cabinets of the inner Conciergerie. Visitors are sometimes allowed, by special permission, to view a part of them; others are the exclusive domain of the judicial world. M. Pottet gives us the names of all the prisoners of importance who have entered the Conciergerie, many of them now completely unknown. We will mention only, in old times, the celebrated historian, Philippe de Comines, who was first in the service of Charles the Bold, Duke of Burgundy, and who then attached himself to Louis XI., Charles's enemy. Comines, whose memoirs are still read, did not, however, die in prison. Victor Hugo introduces in the "Roi s'amuse" Saint-Vallier, who left the Conciergerie for the scaffold, and received his pardon on the road; his daughter Diane, of remarkable beauty, having obtained it from François I. The poets sang the courage of Samblancay, Superintendent of Finances, who left the Conciergerie for Montfaucon, where he was hanged. M. Pottet gives us the text of Ravaillac's "ordre d'écrou," still preserved in the archives of the Prefecture of Police.

The history of the Conciergerie during the French Revolution forms a dramatic chapter in M. Pottet's volume. During the famous September massacre, nearly a hundred prisoners were killed, in the most atrocious manner, by men who made themselves the executors of what they considered the justice of the people. Among the victims was the ex-Minister Montmorin. These massacres, which took place on the 2d of September, 1792, were organized in the prisons of Paris by the Commune. When the Committee of Public Safety was organized on the 6th of April, 1793 (it disappeared only in 1795), it chose the Conciergerie as a sort of antechamber of the Revolutionary Tribunal, and the doors of the Conciergerie were almost always opened only to conduct the men and women condemned by the Tribunal, after a mock-trial, to the guillotine. About 3,000 suspects filled not only the Conciergerie, but the Force, the Abbaye, Sainte-Pélagie, the Madelonnettes. There were always at the Conciergerie several hundred people who knew that they had only four or five days longer to live. The Conciergerie saw Madame Roland; the Mayor of Paris at the beginning of the Revolution, Bailly; the ex-Minister of Finance, Clavières; the Duke d'Orléans; several generals. It became the prison of Marie Antoinette during her last days. M. Pottet gives very curious details concerning the life led in those times at the Conciergerie. "It was less horrible than would be supposed. Death was the order of the day, and people were resigned; the guillotine, being everybody's lot, did not inspire the natural fear which it ought to have inspired. . . . The prisoners flirted, read books, sang songs, chatted, smoked, played at cards, at dominoes, at trictrac." He gives us a number of minor poems composed in the prison, which prove that French courage and gayety never lost their rights.

We find in his book the list of the members of the Revolutionary Tribunal at the time of the Queen's condemnation. All these names are lost in oblivion; Fouquier de Tinville, the public prosecutor, is the only one who acquired an infamous celebrity. M. Pottet's notices of the principal men and women who appeared before the Revolutionary Tribunal are very interesting, as they are accompanied by the reproduction of many documents discoverable only after long research in many places. The list comprises the odious Marat, who was only for a moment at the Conciergerie, and was acquitted and carried away in triumph by the people; Custine, Madame Roland, Madame Elisabeth, Hébert, Danton, Camille Desmoulins, Charlotte Corday, the Girondins Brissot, Vergniaud, Valazé, Gensonné, etc. The Girondins were transferred to the Conciergerie at a time when, by a terrible coincidence, Queen Marie Antoinette was still detained there. Lamartine has given with many details the story of their last days. Their trial is a chapter of French history. There were twenty-two Deputies of the Gironde on the benches of the accused, among them some of the greatest orators of the time. They were all condemned to capital punishment for conspiracy against "the unity and indivisibility of the Republic." They left the court proudly, singing the Marseillaise:

"Allons, enfans de la patrie,
Le jour de gloire est arrivé."

A special chapter will be found in M.

Pottet's book on Marie Antoinette. It is so painful that it is impossible to read it without emotion. The young and beautiful Archduchess who came to France to marry the Dauphin, may have been censurable for her levity, for her disdain of the rigid laws of etiquette, for her partiality for some favorites; but in the trial hour, when she became a sufferer and a martyr, she was, so to speak, transformed. It is impossible to find anything more pathetic than her attitude; she never had a moment of weakness; her defence was proud, as becomes a Queen, and her death was the death of a heroine.

Correspondence.

A CORRECTION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of June 5, in referring to the recent Ontario elections, you seem to indicate that French and English interests there need "balancing." According to the last census, the entire French population of Ontario is 158,698, out of a total of 2,182,947. There is no comparison of the interests there.—Yours, etc., A. M.

DALHOUSIE COLLEGE, June 11, 1902.

[The slip to which our correspondent calls attention—a "balancing of Conservative and Liberal interests" should have been written—is the more venial in that the "race issue" occupies an absurd prominence in many of the Ontario Conservative journals.—ED. NATION.]

Notes.

The Burrows Bros. Co., Cleveland, will reprint immediately in a limited edition, with an historical and bibliographical introduction by Felix Neumann, Denton's 'Brief Description of New York, formerly called New Netherlands.'

John Lane has just ready 'Reliques of Stratford-on-Avon: A Souvenir of Shakspere's Home,' compiled by A. E. Way, with eight lithographs by T. R. Way.

'Herbert Spencer, the Man, the Scientist and the Philosopher,' by Dr. Charles H. Rieber of Stanford University, with an introduction by President Jordan, is in the press of A. C. McClurg & Co.

'The Church and its Social Missions,' being the Baird Lectures for 1901, by John Marshall Lang, D.D., Principal of the University of Aberdeen, will be published directly by Thomas Whittaker.

The second volume of four in the handsome reprint of Sir Arthur Helps's 'Spanish Conquest in America,' edited by M. Oppenheim, comes to us somewhat deliberately from John Lane, as the first was issued in 1900. The editor is very modest in his emendations, expanding rather than having to correct the footnotes, and translating in these the passages from foreign authorities which Helps quoted textually.

At length we have an Anglo-American edition of the 'Book of the Dead,' put forth by an American house and at a reasonable price. It is a revision of the translation by E. A. Wallis Budge, keeper of the Egyptian and Assyrian antiquities in the British Museum. The English edition of 1898 consisted of three volumes, two of which were occupied by the hieroglyphic text. The present edition is in three volumes, and contains not only the complete text of the version, but also all the important vignettes which serve to explain the various chapters and sections. The translation is made from several papyri which combine to present the Theban recension with no less than 190 chapters, some of them in more than one form. Appended are translations of three other recensions—one dating from about 1000 B. C., one from the Græco-Roman period, called the 'Book of Breathings,' and the third, consisting of only two pages, from the Roman period. Appended to the whole is a useful index of thirty-six pages, double columns. The American edition lacks some facsimiles of papyri which are interesting, but not essential to the completeness of the book (Chicago: Open Court Publishing Co.).

'A Concise Dictionary of Egyptian Archæology,' intended as a handbook for students and travellers, has been prepared by Mary Brodrick and Anna A. Morton (E. P. Dutton & Co.). The former is known through her condensation of Brugsch's 'History,' which appeared about eleven years ago, and other minor performances, principally in connection with the Egypt Exploration Fund. A work like the present, which depends for its value so largely upon the soundness of judgment possessed by the editors and upon the trustworthiness of the specific sources of details of information, ought not to have been put forth without a bibliography and without references to recognized authorities. Neither of the editors can lay claim to independent authority, though either is, apparently, a competent compiler. The articles are all brief—scarcely a dozen exceed one page. Such condensation is admirable, but it has been carried rather too far. Some topics have been omitted to the detriment of the book, and some included without corresponding profit. The illustrations, almost without exception, are representations of Egyptian deities. Cartouches of some of the principal kings are given. The book is trustworthy in general, its defects being rather those of omission than of commission. The use of a smaller type would have been better, and would have made it possible to give more material within the same limits.

Mr. James K. Hosmer's 'History of the Louisiana Purchase' (Appleton) is a timely book in popular vein, and will doubtless have a temporary vogue now that short and readable books about the West are in demand. The author traces rapidly the early history of Louisiana; the subsequent steps in the negotiations between France and the United States being followed in more detail. In Mr. Hosmer's opinion, the acquisition of Louisiana, though doubtless the best-remembered achievement in Jefferson's Presidential career, was in reality "a piece of Napoleonic statesmanship—Jefferson and his negotiators playing only a secondary part"; and it is this aspect of the case, with its picturesque and even dramatic details, that he emphasizes. The novelty of the work is the fuller account than other English writers have given of the negotiations as narrated in the 'Mémoires' of Lucien Bonaparte. The larger illustrations, particularly the reproduction of David's Napoleon in the Public Library of Minneapolis, are to be commended.

A monarch who is compelled by law to hold close relations to a particular church has scarcely the freedom of religious expression that is allowed to a private individual. It is not surprising, therefore, that Mr. Walter Walsh, in 'The Religious Life and Influence of Queen Victoria' (London: Swan Sonnenschein & Co.; New York: E. P. Dutton & Co.), has been hampered by lack of material. He has brought together, however, several interesting incidents from her late Majesty's own journals, together with extracts from other diaries confirming the evidence given by these of the simplicity and earnestness of her faith. The value of the book from an historical standpoint is marred by its obviously polemical purpose. Its author is especially concerned to show that the Queen was a strong Protestant, and loses no opportunity of emphasizing every indication of her objection to Roman Catholicism and especially to Ritualism. He is evidently disturbed by several instances, especially in her later life, of conspicuous favor shown by her to Roman Catholic dignitaries and institutions, but he disposes of these by the convenient theory that in these cases she was acting on "the mistaken advice of her ministers of state, as a matter of state policy."

Miss Higgin's little illustrated book does not go far towards portraying 'Spanish Life in Town and Country' (New York: G. P. Putnam's Sons), but does give a series of light, if rather disconnected, essays on the conditions of modern Spain. As the daughter of an English resident in Spain of long standing and wide industrial interests, she has had many-sided opportunities, which, without any special literary gifts, she has used very fairly. The total impression is of a country which is awake and in earnest, and which is working out its own salvation in its own way. In spite of Jesuits, Carlists, and Anarchists, there is hopefulness in the air. Noteworthy is the certainty with which, both from a Spanish and from an English point of view, Cuba is regarded now as a part of this country. Our purpose—constant since Jefferson, they think—has been at last accomplished. So, too, thinks continental Europe generally, to judge from the new "Stieler." In it the Gotha geographers have colored Cuba like Porto Rico, and add only the explanation, "Cuba hat selbständige Verwaltung." That is how independence looks from across the Atlantic.

Lovers of our native flora can have absolutely no excuse for not familiarizing themselves with our more interesting plants. The excellent manuals by Gray and the illustrated work by Britton and Brown give the widest desirable range for the student who wishes to take a general survey. Besides these handbooks of wide range, we have a goodly number of more popular treatises which, by means of clear outlines or by colored plates, put the amateur face to face with the plant and its name. The increasing demand for books of this class shows that we are likely to be well supplied with trustworthy guides to our native plants, and that, in the near future, the tourist returning from his botanizing in the nearer or the farther alps and fields of the Old World, will find that his European handbooks, with their attractive plates, are no better than those prepared here. The latest

claimant to popular favor, 'Field-Book of American Wild-Flowers' (Putnams), comes to us from the pencil and pen of Mr. F. Schuyler Mathews, who has already done much towards making the people of the Eastern United States acquainted with the plants of the garden and the roadside, and with many of our plants of the field. The present treatise, of more than 500 pages, and containing very numerous plates and figures, will be found convenient, on account not only of its small size, but also of its arrangement. Mr. Mathews has a fund of interesting information in these crowded pages in regard to the more intimate relations of flowers to insects.

The veteran trade-union leader, Mr. George Howell, tells the story of the agitation to which he has devoted his life, in a bulky volume entitled 'Labor Legislation, Labor Movements, and Labor Leaders' (E. P. Dutton & Co.). The matter of the book is more of the nature of annals than history, and annals that are to a great extent unreadable. This was perhaps not to be avoided, as the author intended his chronicle to be complete and final. There are occasional episodes of interest, and the more recent controversies are described with spirit. The enlightened views of Mr. Howell attract our sympathy. He speaks generously of those who withstood him, as becomes one who has conquered, and he frankly confesses that he and his supporters were often in the wrong. Were the trade-union leaders always animated by his spirit, the industrial world would be more peaceful than it is.

As having essentially the same subject, we may mention a book more pretentious than that of Mr. Howell, although of less permanent value. It is entitled 'Labor and Capital' (G. P. Putnam's Sons), and is made up of the contributions of nearly fifty more or less eminent persons to the newspapers published by that eminent philanthropist, Mr. W. R. Hearst. As some of these newspapers have been excluded from clubs and libraries, contributions of this kind may very properly be reprinted in a form available to readers who would otherwise not see them. We cannot say that such readers will find anything new in the remedies and palliatives for industrial disputes here offered; but the theories of so great a body of cooks should have some noticeable effect upon the composition of the broth.

In the 'Terrors of the Law' (John Lane), Mr. Francis Watt follows a vein which he has already worked with some success in 'The Law's Lumber-Room.' The subjects here are Lord Jeffreys, Sir George Mackenzie, and Lord Justice Braxfield. All won the epithet "bloody" from their contemporaries, and we observe no reason in what Mr. Watt advances why posterity should modify the verdict. The effect of Mr. Watt's pleading in behalf of Jeffreys is rather to create an unfavorable impression as to his own standards of morality than a favorable one concerning those of his hero. The infamy of the other judges is narrower in extent, being confined to Scotland; but in that land it is enduring. Mr. Watt writes cleverly; his anecdotes are well told, and he shows that odium was in some cases undeserved. But he is more enjoyable if we do not take him seriously, and regard his book as meant simply to occupy a leisure moment.

The complexity of modern civilization is nowhere more strikingly illustrated than in the development of insurance. One may now secure himself against almost all conceivable forms of loss; and the insurance companies are making steady progress in lessening the causes of damage. One of the recent branches is that called guaranty insurance, which provides indemnity for losses occasioned by fraud, dishonesty, and breach of contract. 'The Law of Guaranty Insurance' is the title of a treatise on this subject, by Mr. Thomas Gold Frost, published by Little, Brown & Co. The author has endeavored to resist the temptation to dogmatize, and confines himself generally to stating principles actually settled by judicial decision; the language of the reports being freely quoted. His work appears to be carefully and systematically done, and it will be appreciated by the profession. We can, of course, not attempt to criticise it in detail, but we may commend the historical introduction as lucid and interesting.

Of the amount of labor involved in Dr. William Grant's 'Christendom Anno Domini 1901' (Chauncey Holt), there can be no question. Even with his team of more than sixty contributors, many of them of high standing and some taking their tasks seriously and broadly, his attempt to give a presentation of Christian conditions and activities throughout the world generally is hopelessly gigantic. But the task has been greatly reduced by a certain narrowness in many of these contributors, who have been inclined to interpret Christendom as Protestantism, and Protestantism as American missions. Dr. Grant laments this discreetly, and has done his editorial best to balance it with introductory notes. The first volume is geographical and runs from "Africa" to "United States"; the second is institutional, and describes the religious movements of the century. The last is singularly complete. Even a Paulist Father finds a ridiculously inadequate twenty-three pages to sketch the Church of Rome and Roman Catholic Missions. As a whole, the book is disappointing. The sketches are very uneven. Some are well done; others are provincial in tone and ineffective in execution. Yet, within its possibilities, the book accomplishes much, and may be read with advantage by those who regard Christianity as already moribund. The illustrations would be better away.

In the volume just issued of Dr. Rodkinson's translation of the Babylonian Talmud, the section "Baba Bathra" is completed. It considers various problems of the law of sale, the measuring of things sold, the division of inheritances, and the drawing up of binding deeds. Over it all the track of the Roman law is broad; but there are relieving points of humor, intended or not, as where Jacob, in defence of his conduct towards Laban, quotes to Rachel II. Samuel, xxii., 27. Even Oriental anachronistics could not well go further.

The great literary undertaking of the house of W. Sijthoff, in Leyden, consisting in the facsimile reproduction of the most important manuscripts of Greek and Latin literature, has now reached the seventh volume. This includes in its two parts a faithful reproduction of the two Codices Laurentiani Mediceï 68 I. and II., which constitute the basis of the text of the two most important works of Tacitus, the Annals and the Histories, and are of prime importance for textual and palæographical studies. For both parts, the Conservator of the Manuscripts in the Bibliotheca Laurenziana, Henry Rostagno, has furnished extensive introductions. The two parts together make 482 folio pages, and cost $75.

The first part of a 'Realistische Chrestomathie aus der Litteratur des klassischen Altertums,' by M. C. P. Schmidt, now completed in three volumes (Leipzig: Dürr), is worthy of the attention of all classical scholars. Professor Schmidt has been led to make this collection from a belief, which he has set forth in various brochures during the past three years, that those parts of ancient literature which deal with the sciences are worthy of a place in the school curriculum. To the three books which he has so far compiled he has given the names "Buch der Grössen," "Buch von Himmel und Erde," and "Buch der Erfindungen." The extracts included in the first two books, almost exclusively Greek, deal with mathematics, astronomy, and geography; while the third book contains descriptions of such things as ships, weapons, and clocks, together with other instruments and apparatus known to the Greeks. The volumes are well furnished with notes, and excellent introductions cover a field of Greek Literature seldom investigated by the classical teacher. Another interesting feature of the work is a series of eighty-seven illustrative diagrams and figures. However much one may question the advisability of introducing such matter into schools, it cannot be denied that the editor deserves thanks for having collected and edited in a masterly way such a mass of curious material from works not generally found in the teacher's library. The volumes will be of especial interest to the student who is interested in the technical side of antiquity.

We have received from the art-publishing house of Georg D. W. Callwey in Munich sheets numbered 31-36 in continuation of the meritorious series of "Meisterbilder fürs Deutsche Haus," excellent reproductions on cardboard suitable for framing, or for passing from hand to hand, of masterpieces here ranging from Ruysdael ("The Swamp"), Rembrandt ("The Scholar"), Hans Holbein ("Sir Bryan Tuke"), Dirk Bouts ("St. Christopher"), to the modern Alfred Rethel (1816-1859). The wrapper of each of these designs is utilized for a sketch of the life of the artist.

The *Harvard Graduates' Magazine* for June completes its tenth volume handsomely, having for illustrations a capital portrait of the late Prof. James B. Thayer to accompany a sketch of his life by Edward H. Hall; another, of the strong face of Mr. Moody, the present Secretary of the Navy; and finally, of Prince Henry of Prussia, which mates with President Eliot's gem of a speech at the Prince's Boston banquet on March 6. "The democracy," he said, with examples, "preserves and uses sound old families; it also utilizes strong blood from foreign sources." An example not down in his bill is supplied under the news from the class of 1853, with its fresh account of the extraordinary career of the late George Smith of St. Louis (born Connelly, son of an Irish porter), one of the

most recent munificent benefactors of Harvard. And, speaking of necrology, it is remarkable that in this number is chronicled the death of the second only of the alumnæ of Radcliffe. Prof. A. B. Hart, we observe with regret, must hand over to another his survey of "The University," which he has conducted with singular ability and vivacity. He has a chapter here on the retirement of the clergy from the head of our colleges which was prophetic of the recent succession at Princeton.

In the *National Geographic Magazine* for June is a brief preliminary account of some of the observations made by the expedition sent out by the society of which it is the organ to Martinique, to study actual volcanic action. Prof. Robert T. Hill, after describing some of the eruptions of Mont Pelée which he witnessed, says that "nearly all the phenomena of these volcanic outbreaks are new to science, and many of them have not yet been explained." Another member, Prof. A. Heilprin, who succeeded in reaching the top of the crater on May 31, reports that he "saw a huge cinder cone in the centre of the crater. The opening of the crater itself is a vast crevice, 500 feet long and 150 feet wide." Ashes fell about him in such quantities as to completely obscure his vision, and one particularly violent explosion covered him from head to foot with mud. A unique phenomenon recorded at the Coast Survey magnetic observatories in Maryland, Kansas, and the Hawaiian Islands was an electro-magnetic wave, which, on "the morning of May 8, pulled the magnetic needles aside from their usual direction for many hours." This is the first observation of the kind which has been made, and seems to demonstrate, not mechanical vibrations which have been previously noted during earthquakes, but a distinct magnetic disturbance resulting from volcanic eruptions and felt 5,500 miles distant.

At last the system of revised German orthography is becoming a reality. According to the joint agreement of Germany, Austria, and Switzerland, a new and uniform system is to be officially introduced in all these lands on the 1st of April, 1903. This is the outcome of an agitation that began nearly half a century ago. The first move in this direction was taken by the educational authorities of Hanover in 1856, followed by those in Leipzig in 1857. The first steps on a greater scale were taken by Prussia in 1876, the other States of the confederacy participating later. Now, as the result of many conventions and deliberations, a simplified system has been adopted, the changes being chiefly along three lines, namely, (1) the omission of superfluous letters, but only where these are really not needed; (2) the spelling and writing of words in accordance with real grammatical significance, as in the capitalizing of true nouns; (3) the spelling of purely foreign words as in their native tongue. The new system is to be introduced in all the German schools of the three countries, and is the only one to be officially recognized. A considerable number of publishers, newspapers, and periodicals have already begun to employ the innovation, the general introduction of which will seemingly be easily effected.

—The President of the American Museum of Natural History, in his latest annual report, gives a summary of the work accomplished during the year by the different departments of that institution and by the various exploring expeditions under its control. The organization of a department of mineralogy was made necessary by Mr. Pierpont Morgan's gift of the famous Bement collection of minerals. Some twelve thousand specimens, representing most of the known established species, have been installed in the central hall on the fourth floor of the Museum building and placed in the charge of Louis P. Gratacap. A department of invertebrate zoölogy has also been established, with Hermon C. Bumpus as curator. The publication of the catalogue of types and figured specimens in the palæontological collection, which has been in progress for several years, has been completed. In it are described 8,345 specimens, representing 2,721 species and 190 varieties. The department of anthropology has maintained expeditions in several parts of the United States, and in British Columbia, Mexico, Central America, Bolivia, Peru, Greenland, Siberia, Japan, Corea, and China, resulting in large additions to the collections and furnishing much material for description. W. Jochelson and W. Bogoras have entered upon a new field of research on behalf of the Jesup North Pacific Expedition in the extreme northeastern part of Siberia. Their investigations among the Chukchee, Koryak, and Yukagheer tribes on the coast of the Sea of Okhotsk have been completed, and the material collected by them has been forwarded to the museum. The collection of models of totem-poles made by John R. Swanton of the same expedition is noteworthy, and serves to illustrate the significance of these peculiar emblems. A well-preserved totem-pole, fifty feet in height, has been received from the Queen Charlotte Islands and placed in the open space of the stairway in the west corridor hall. A. L. Kroeber has finished his field work in connection with the Mrs. Morris K. Jesup expedition to the Arapaho Indians, and the illustrated manuscript setting forth the results of these important investigations is ready for publication. The field work of the Huntington California expedition, in charge of Roland B. Dixon, has also been completed, and the collections are all on exhibition. The explorations of M. H. Saville of the Mexican expedition have resulted in the solution of several problems concerning the architecture of the celebrated ruins in the vicinity of Mitla. A pre-Columbian map or "lienzo" on native cloth (a unique example of this class of American codices) and a map of Teotihuacan painted on maguey paper have been obtained. The exploration of the Delaware Valley has been continued by Ernest Volk, who has gathered important information relating to the occupation of the region about Trenton and bearing upon the evidence of preglacial man in America. Local archæological explorations have been carried on among the rock-shelters near Westchester and in village sites and shell heaps on Long Island, especially those near Oyster Bay and Glen Cove, and much of importance relating to early Indian life has been learned.

—Among the ruined Central American cities of ancient culture, Palenque, Quirigua, the Usumatsintla towns, Tikal and Copan, the last-named attracts the greatest interest at present on account of the resumption of archæological explorations there. Its ruins are situated on the banks of Copan River, Southern Honduras. The site where the main temple stood is now a square platform with steep declivities on all sides. The temple is gone, leaving no trace behind except the western approach. When the Peabody Museum of Archæology, at Cambridge, sent its first expedition to the spot in 1891, the whole structure was overgrown with heavy timber. The elevation where the temple was is now known as Mound 26; at present it looks like a high-pointed pyramid, the apex and sides of which have been considerably reduced by the disintegration constantly going on. The western side of this pyramid presents the greatest architectural feature that has yet come to light in Copan, namely, the "Hieroglyphic Stairway." The steps of this stairway were formed by large stone blocks carved on the front side with the well-known calculiform figures, some of which are intended for numerals, and others for names, generic terms, and the like. The first who directed attention to the stairway and the excellent design and workmanship of its component parts, was Maudsley, and his genius also pointed out the former importance of the spot, of whose earlier shape heavy landslides had made recognition well-nigh impossible. From the latest measurements it appears that the whole width of the stairway, including the balustrades of 3½ feet, was twenty-six feet; that of the altar at the bottom, twelve feet. As regards height of slope, the portions of the stairway still *in situ* measure twenty-five feet, which is just one-fifth of the whole slope once covered by the stairway. The probability is that there were eighty carved steps from the base to the top of the stairway, where the temple stood. The several human figures which decorated the centre of the stairway show the sculptural art to have been crude, though full of promise, and the whole structure must once have left on the spectator a weird and awful impression. Of the inscription which formerly decorated the stairway, but a few broken fragments remain. The story is told by George Byron Gordon, with admirable photographic illustrations, in No. 6 of volume i. of the "Memoirs of the Peabody Museum."

—Lovers of Edmondo de Amicis will find pleasant reading in his latest little book, 'Un Salotto Fiorentino del Secolo Scorso' (Florence: Barbèra). The salon described is that of Ubaldino Peruzzi and his wife Emilia, who, from the late fifties onward for a generation, attracted to their hospitable parlors not only the best minds in Florence, but whatever strangers of note visited the magic city. De Amicis draws vivid portraits of the most interesting of the group, and he reports a few anecdotes; but it is surprising how little written record remains of the wit, enthusiasm, and learning poured out there for so many years. Peruzzi was one of the chief Tuscan Liberals, and a Cabinet Minister; but, while the talk naturally centred in politics, it was not limited to them. We are left with a particularly sympathetic impression of Donna Emilia, who, like her Parisian sisters, had the art of getting the best out of each guest, and of preventing the clash of opinions from leading to personal quarrels. Her perfect frankness was charming, and was not abashed even by the im-

perious Ruggiero Bonghi, who, for all his Platonism, seems to have had not a little of Swift's sardonic nature. Thus, when Signora Emilia, after reading news of a great calamity, exclaimed, "How can God possibly permit these things!" Bonghi placidly answered, "If God does not exist, there is no use to discuss further; if he exists, believe me, Signora Emilia, he does not bother himself with these matters." Scattered through the book are small half-tone portraits of most of the persons whom De Amicis writes about with unfailing kindliness.

—Threescore years and ten is no longer looked on as the normal limit of human life, yet the custom prevalent in Germany of printing in the newspapers biographic sketches and "appreciations" of eminent men on the occasion of their seventieth birthday is probably a reminder of the time when the Biblical view was prevalent. This custom calls attention to the apparently increasing longevity of brain-workers, and is probably not disagreeable to those whom it chiefly concerns, because at their age the maxim *Nil nisi bonum* is usually applied in advance. One of the latest septuagenarians thus celebrated is Wilhelm Busch, who, although he has declared that the bubble fame no longer interests him, must have been gratified by the unanimity with which the journals agreed in pronouncing him the greatest German humorist of the nineteenth century. His name is inseparably associated with the rise and growth in popularity of Germany's chief comic paper, the *Fliegende Blätter*, to which he began to contribute in 1859, both as a writer of jokes and an illustrator of them. He soon got into the habit of creating connected groups of jokes, and these were issued separately as the 'Münchener Bilderbogen.' Of such as were issued in book form, the story of the two bad boys "Max and Moritz" became the most famous, both at home and abroad; and Busch soon found himself the "populärster Bilderhumorist Deutschlands." In 1872 he became an ardent admirer of Schopenhauer, and some of his critics claim that his jokes grew more cynical and pessimistic; but there was always a serious undercurrent to his laughter, wherein it resembles that of our leading humorist, and illustrates Schopenhauer's definition of humor as "hinter dem Scherz versteckter Ernst." In an autobiographic sketch he compared his jokes to naughty boys who have little regard for other people's corns, and, in turn, do not mind being scolded occasionally. In his letter of thanks to those who celebrated his seventieth birthday he referred to his pictorial jokes as his method of "triumphing a little over the annoyances of the world." These annoyances, despite his success and popularity, induced him, some years ago, to hide himself in a village named Mechtshausen, near Hildesheim, where, like Maeterlinck, he devotes much of his time to studying the habits of bees. He no longer writes for the comic papers. A Munich journalist surmises that this is owing to the fact that the public paid no attention to his serious books—'Kritik des Herzens,' 'Eduard's Traum,' and 'Der Schmetterling'—and that he said to himself in consequence: "Very well, if you refuse to read those books, neither shall you have any more jokes."

—'Zehn Jahre mit Böcklin' is the title of a collection of aphorisms and diary notes in which the late Prof. Gustav Floerke jotted down the impressions of his intercourse with the great painter, and which now have been published by his son (Munich: Bruckmann). These notes are all the more important for a just estimate of Böcklin's character because the master himself, confiding in the primitive power of his work, on principle avoided public utterance about his aims and ideals. Here for the first time (for the book by Schick had exclusively technical interest) both the painter and the man Böcklin are revealed fully and to the life. We are introduced to his æsthetic doctrines, his views about predecessors and contemporaries, his attitude toward nature and life, toward classic antiquity and modern culture, mostly in his own utterances; and through it all we come to know a personality of truly heroic power, joyousness, originality, and self-possession. Of the anecdotes in which the book abounds, we quote one: "Professor Horner of Zurich, at that time probably our foremost ophthalmologist, once told our Böcklin that he had never seen such perfect eyes as his. 'You probably can look into very strong light, can you not?' 'I like to look straight into the sun.' "

ENGLISH WORDS AND THEIR WAYS.

Words and their Ways in English Speech. By James Bradstreet Greenough and George Lyman Kittredge. The Macmillan Company. 1901.

This handsome volume of over four hundred pages is the joint work of two American scholars whom all will recognize as peculiarly well fitted to perform such a task. For many years Professor Greenough had not only his head but also his heart full of the subject, especially that part of it which deals with the Latin in English; and he was fortunate in having as collaborator a colleague thoroughly familiar with the present state of Germanic scholarship. The publication of the volume was almost simultaneous with the announcement of the death of Professor Greenough.

The book deals with a subject of universal interest. This interest has stimulated the publication of numerous books treating of words and their use. Some of them, notably Trench's, were very acceptable when published, but are now out of date, and most that have appeared in the last twenty-five years represented a scholarship already antiquated when they were issued. 'Words and their Ways,' on the contrary, is so far in advance of similar books that it is destined to displace them all, and demands of the reviewer more than the usual modicum of consideration. In a sense, the book is misleadingly named, for it deals not only with words, but, in one way or another, with most of the important phenomena of language. Thus, the origin of Indo-European speech receives consideration under "Cognates and Borrowed Words"; various syntactical constructions are smuggled into a chapter entitled "Fossils" (p. 205); and chapter seven confessedly deals with the rise and fall of the different literary dialects. Chapter eight is called "The Latin in English," but it really treats of the various foreign influences that English has been subject to.

On nearly every page is sounded the keynote of language-life—*change*. We find it in the treatment of the forms of words, the meanings of words, and the uses of words. But there is no regretting and whining, no loud protestations, no call to all lovers of English to rise up and save it from ruin. Full recognition is given to Jespersen's doctrine that the loss of inflection is progress, not decay (pp. 184, 280). He who still looks upon the Norman Conquest as the cause of the changes from Old English to Middle English, will find in this book little to strengthen his faith. The double phrases of the Book of Common Prayer—*assemble and meet together, bless and sanctify, food and sustenance*, etc.—which were formerly supposed to be based on the coördinate use of French and English words for the same idea, are simply dealt with as a stylistic feature of the language, which Professor Hart has traced back to early West Saxon. And yet it was but a few years ago that the scholarship of the past, in the person of Professor Earle, was fighting hard for this old dogma against the knowledge of to-day as represented by Professor Emerson.

The difference between the past and the present could not be better illustrated than by the statement: "Language develops by the felicitous misapplication of words" (pp. 217, 283). Simple ignorance is a positive force in language, and cannot be ignored or escaped. The present use of *restive* is undoubtedly due to confusion with *restless* (p. 194), but that present use is a fact, and those who soberly urge us to employ the word in a sense that would be misunderstood by practically all who might hear us, betray lack of humor as well as ignorance of linguistic forces. There is a gallant spirit, as well as good philological sense, in the attitude assumed by our authors not only toward changes due to ignorance, but also toward those due to other human weaknesses. Witness what is said of hyperbole and magniloquent speech (pp. 328-329). Again, on page 322: "It is the courtesy of democracy, not its assertiveness, that brings about the results which amuse us in *saleslady*, or *washerlady*, or the *gentleman* who sweeps the crossings." To this same courtesy is to be ascribed much that takes the form of euphemism, which our authors too exclusively ascribe to the superstition that it is unlucky to speak of certain things by their right names (p. 301).

The development of words is given in two chapters, one on roots, stems, and inflections, and one on derivation and composition. These chapters are perhaps the least fortunate in the book. That this appeared to be so to one of the authors, at least, is betrayed by the long apologetic footnote on pages 168-169. The aim to be clear, even at the expense of accuracy in details, is not to be quarrelled with. But the presentation of the subject of roots, stems, and inflections is here unwarrantably mechanical, and must give the learner a totally false conception of the nature of word development. He is told of a root-period and a stem-period, that antedate the period of "real words as we know them." It is admitted that roots once existed independently in actual speech, but it is repeatedly insisted upon that stems are not words. The learner is told that, "since stems are not words, and no such thing as syntax existed in the stem-period, we cannot designate stems as parts of speech—nouns, verbs, and so on" (pp. 172, 177, 178).

Of course, there is a certain relative truth in this. But it is much more important that the learner should realize that what we call roots were words; and that when they got the determinates that we call stem-endings, they were still words; and that when further endings were added designating case, person, etc., they were words no more and no less than they were before. Nor is a language devoid of syntax until inflexional endings arise to express it; as truly as it does not lose its syntax when its endings wear away. It is obvious that the authors (or author?) intentionally liken these phases of language life to the processes of manufacture. "These words are built up by the mechanical means of word-formation" (p. 13). "*-like* has become a universal termination for the manufacture of adverbs from adjectives" (pp. 186, 187, 177). "We have examined the machinery which makes new terms by derivation and composition" (pp. 219, 281). In contrast with the regular factory product, *electrocute* is spoken of as "cobbled together." This mechanical notion of speech-development is still all too common, and it is to be regretted that we should find it fostered by so good a book as this. The truth is that there are as many languages as there are speakers, and that the great majority of "changes" consist simply in the imperfections of the copy that one generation makes of the speech of the older generation. The consideration of this simple fact at once makes clear the cause and process of numerous changes that remain vague and hazy as presented in the book before us. Surely, the true nature of language-development is caricatured when we speak of "the unconscious *habit* of the Spanish provincials to change Latin *f* to *h*" (p. 164).

One of the most pleasing features of the book is the wealth of illustration. Most of this is fresh and evidently obtained at first hand. And here we have one of the fruits of that long and minute study of Shakspere and Chaucer which has been carried on at Harvard under Professor Kittredge and his predecessor, Professor Child, to whose memory this volume is fittingly dedicated. It would seem as though no matter of verbal usage could be touched upon without suggesting pat illustrations from one or both of these masters of English. Many common misunderstandings of familiar quotations are explained, as Chaucer's *countenance* ('bearing'), Othello's *Upon this hint* ('occasion,' 'opportunity') *I spake, a forlorn hope* (Dutch *hoop* 'band,' 'troop'), *an exploded* ('clapped or hissed off the stage') *fallacy*, and Tennyson's misunderstanding of *courtesy* (p. 284). But we must not fall into the error of supposing that expressions like Chaucer's *not worth an oyster* (p. 311) are anything more than inventions necessitated by the rime.

When dealing with the histories of words, one is often tempted to lend a willing ear to an etymology that brings up a pretty picture of life or manners. The sober judgment of our authors, however, generally saves them from such temptations, and leads them to add the warning words: "This explanation is attractive, but not quite easy," or "This suggestion is not free from difficulties." But no one can avoid all errors. The verb *to chaff* has nothing to do with the chaff that fails to catch the old bird (p. 71); it is only a variant of *chafe*. *Wheedle*, whatever its origin, cannot be from German *wedeln* (p. 67). *Bamboozle* (pp. 63, 65) is a metathesized form of the North-Country *bombazle*, the frequentative of *bumbaze*, 'confound,' 'bamboozle,' which is a compound of *bum* 'strike' and *baze* 'confound,' 'frighten.' *Spill* did not leap from 'destroy' to 'spill,' but passed through 'scatter.' *The sun sets* is not to be confounded (p. 281) with the modern vulgar confusion of *sit* and *set*. It is ME. *setten* 'set (of the sun)', OE. *settan* 'subside,' 'go down,' and so is ultimately the same word as *set* 'make sit'; for the Germanic *-jan* verbs were not restricted to the causative sense. Our *gore*, 'a triangular piece,' is not from Old-English *gār* (p. 210), but from the weak derivative *gāra*. The Germanic word seen in English *under* stands for both Latin *infra* and Latin *inter;* hence there is nothing at all inconsistent (p. 236) in *under these circumstances*, or in German *unter diesen Umständen*. The word *near* (p. 200) has no mutation, and that of *next* is not *i*-mutation. Such forms as *varsity, varsal, tarnal*, as well as *possum, coon, cute, squire*, and *Miss*, are perfectly normal phonetic developments, and must not be identified with the slangy clipped forms *aft* or *after* for *afternoon, exam, prof, cab, bus, phone, photo*, etc. (pp. 61, 62).

The chapters on slang and on fashion in language are particularly good. Not only, however, does slang at times become good English (p. 74); perfectly good English may, by persistent repetition, become slang —for example, "Not much," "And don't you forget it." The use of *his* with names of authors, for example, "He knew his Homer from beginning to end," cannot be designated as purified slang (p. 61). It is simply an analogical use of the possessive that arose in speaking of the getting of lessons, thus, "He decided to postpone studying his algebra and to learn his Homer first."

We may congratulate ourselves that the English language is here found sufficient for the discussion of English speech. Only one or two German words still spot the page: *Umlaut* (for *mutation*), and *Sprachgefühl*. The latter term is used by the Germans for one's intuitive feeling for what accords with the spirit of the language. For this, English-speaking people used *feeling* (compare *usage* where the Germans say *Sprachgebrauch*) until they began to go to school to the Germans and learned the German word. Our authors employ *Sprachgefühl* (pp. 126, 147, 181) mostly in the sense of 'spirit of the language' or 'genius of the language,' for which the English terms are all-sufficient. One Germanism that has of late crept into the philological talk of English-speaking people appears on page 209—*fall together* (*zusammenfallen*) for *coincide*. Slips are extremely rare: "Journal of German[ic] Philology" (p. 118). *W. Ger.* (p. 143) needs explanation more than several of the abbreviations that are explained.

The work is equipped with a table of contents, an excellent index of matters, a nearly complete index of words, and a helpful bibliographical appendix. These features render it easy to get at any one of the thousands of items which make this rather a book of reference than a manual for the average student of English, for whom it is really too full. An abridged edition, prepared for use in schools and colleges, would meet with a warm reception.

FIVE BOOKS ON MUSICAL TOPICS.

English Music in the Nineteenth Century. By J. A. Fuller Maitland. E. P. Dutton & Co.

Mastersingers. By Filson Young. Charles Scribner's Sons.

Music and its Masters. By O. B. Boise. J. B. Lippincott Co.

The Philosophy of Voice. By Charles Lunn. G. Schirmer.

La Musique à Paris, 1898-1900. Par Gustave Robert. Paris: Ch. Delagrave.

In the opinion of Mr. Maitland, "music in England is the only one of the arts that has a vivid life at the present moment." Mr. Maitland succeeded Dr. Hueffer as musical critic of the London *Times*, and his books and other writings have given him a place among the few whose opinion is authoritative. Champions of contemporary poetry or painting might dispute his assertion, so far as those arts are concerned; but the thesis that music enjoys a healthy, vigorous life in Great Britain at present he has maintained ably in his new volume, which not only is by far the best book ever written on music in England, but brings the subject up to date from every point of view.

Before the nineteenth century there were periods when England had a spontaneous, indigenous musical life. Then, for a long time, it became merely receptive. Among European nations the English was for a long time far more ready than any other to welcome musicians from abroad. Not only English composers, but English performers, were underpaid; but, on the other hand, the constant importation of famous artists from the Continent gave English audiences the advantage of hearing everything that was best in the musical world. Attention is also called to the fact, to be pondered by chauvinists, that it may be doubted, supposing that the custom of this English hospitality to foreign artists had not existed, whether the money paid by the public to hear them would have gone into the pockets of English musicians instead. It was in the department of opera, naturally, that the foreign invasion was most conspicuous. The author has an interesting chapter on "The Palmy Days of the Opera," in which he shows, among other things, how Augustus Harris saved and revived grand opera by breaking down the stupid tradition of Italian being the only language for opera. By following the policy of singing each opera in the language it was written in, and by adepts in its style, grand opera has actually been made profitable in London as in New York; whereas during the long period when Italian opera alone ruled, "manager after manager was ruined by it, and the only marvel is that any one should have been found willing to undertake the business."

Mr. Maitland does not overrate Handel, whose oratorios were so nicely calculated to please British taste. He frankly discusses the British public's "ill-regulated enthusiasms," which, first in the case of Handel and then of Mendelssohn, made it impossible for any one but their imitators to win approval. He also dwells on the temporary craze for the oratorios of Gounod, of which he speaks in a tone of contempt strangely at variance with the enthusiastic attitude of

Saint-Saëns; and on the behavior of the public in regard to the music of Brahms, Tchaikovsky, and Wagner. After discussing these "Foreign Dominations," the author treats of "The Church Composers," "Before the Renaissance," "The Transition," "The Institutions," "Sullivan and Light Music," "The Leaders of the Renaissance," "Opera in the Renaissance," "Followers of the Renaissance," "Drawbacks and Prospects." He is convinced that, in a thousand ways, the musical atmosphere to-day is more favorable to native talent than it was at the beginning of the last century; and that during the last quarter of a century England has regained a position she has not held for at least two hundred years. Even if one cannot agree with Mr. Maitland in the high estimate he places on some of the "leaders of the Renaissance," it is pleasant to come upon his optimism in a place where pessimism and talk of decadence usually prevail.

A more despondent view of music in England is taken by the author of 'Mastersingers.' "We seem," he writes, "to have the same machinery in London for producing composers as they have in Vienna and Leipzig, but still the composers do not come." Mr. Young deplores the absence of a musical "atmosphere" in England, and the public's addiction to buying reams of stuff that is artistically worthless:

> "The taste of a people in art is shown not so much in the concert-hall as in the drawing-room, less in the picture gallery than on the dining-room walls; and in music the English drawing-room taste is for these travesties of art: all that is commonplace, characterless, maudlin, and invertebrate finds favor there. A mean prettiness is the most that is asked for."

The chief fault of Mr. Young's book is a tendency to verbose preludizing. But he has many interesting things to say, particularly about Charles Hallé, Bach, Tchaikovsky, Wagner, Mozart, Saint-Saëns, and others. A more able criticism than his of Berlioz has never been written, and the chapter on "An Irish Musician" is a just tribute to Dr. Stanford. "It is because Stanford's music has the power to grip men's hearts in a far greater degree than the music of his contemporaries has it," that, our author thinks, "his name and fame will be left standing among the ruins of much that now seems likely to endure."

'Music and its Masters' is a somewhat misleading title for a book treating of the art in such chapters as "The Nature and Origin of Music," "Music's First Era," "Biblical Mention of Music," "Music from the Invention of Notation to Date," and so on. The author is at fault in some places, as when he repeats the old legend (which used greatly to annoy the great song composer) that Robert Franz formed his name by combining the first names of his idols, Robert Schumann and Franz Schubert; or when he asserts that "Wagner left little or nothing to the conductor's discretion." He talks sense when he declares that "some of Johann Strauss's waltzes are quite as genuine music as are Beethoven's symphonies," and adds that he thinks it "pure affectation for musical persons to express a lack of respect for a good piece of dance music." He talks nonsense when he says that Chopin is not entitled to a place among the musical giants; but one may forgive him because he understands that "nature made Schubert the greatest musical genius the world has seen."

The author of 'The Philosophy of the Voice' says justly that "in voice-production the reign of anarchy has been reached—*Quot homines, tot sententiæ.*" His object is to induce in human beings a mode of voice-production similar to the spontaneous effusion of song-birds. This is a noble ambition, and Mr. Lunn's volume undoubtedly contains some useful hints and suggestions for singers. It is to be regretted that he deemed it necessary to obscure his practical details with mathematics and metaphysics. It does not help a singer to give him such peculiar information as that "mind is made up of three powers: the memory, the understanding, and the will," or to assert that "oneness of being" is "the necessary condition of life." The last chapters are on Stammering and Stuttering and Ventriloquism.

A new volume of M. Gustave Robert's 'La Musique à Paris' is always welcome. The latest volume covers the period 1898-1900, and gives, as usual, a detailed account of all the important musical events in the French capital. For reference, M. Robert's volumes are invaluable, but they also make good reading. Among the notable things in the new issues are studies of Rameau, of "Tristan," of Lamoureux, and several German conductors; of Gluck, Bach, and other composers. There is an elaborate parallel between Massenet and Paul Bourget, with an inquiry into the causes of their popularity. The Grieg-Dreyfus incident is discussed at length, and there are chapters on Richard Strauss and Siegfried Wagner. The last fifty pages are devoted to reviews of recent works on musical topics.

ROBERT'S ILIAD AND ODYSSEY.

Studien zur Ilias. Von Carl Robert. Mit Beiträgen von Friedrich Bechtel. Berlin. 1901. Pp. 591.

The Homeric Question, as to the composition of the Iliad and the Odyssey—whether these had one author or many, and how they came into being and received the unity which they unquestionably possess, whether by a combination of separate lays, or by organic development according to definite plans as true works of art—has known three clearly marked stages. In 1795, Friedrich August Wolf, in his 'Prolegomena ad Homerum,' which has had more influence on so-called higher criticism than any other book ever published, urged that poems of this length could not have been composed or transmitted from generation to generation without the aid of writing, and that this art was unknown in the Homeric age. Therefore, the poems must have been composed as brief lays, and were first united to form the Iliad and Odyssey as we know them by an Athenian commission of the sixth century B. C. At present, scholars do not doubt either that poems can be transmitted by oral tradition for centuries, or that an art of writing was known in Greece a thousand years before our era; but whether this art was used for literary purposes at so early an age is uncertain.

Wolf's arguments against the original unity of the Homeric poems were exclusively external. In 1837, however, Lachmann presented to the Berlin Academy of Sciences "Considerations on Homer's Iliad" which were designed to show from internal evidence that this poem was made up of eighteen independent lays, determined by various inconsistencies; for example, at the close of the first book of the Iliad, Zeus goes to his couch and to sleep, while the second book begins, "All the rest slept, both gods and men, but Zeus did not sleep." Although not all of his followers agreed with him in the details of his divisions, during the next forty years the Homeric Question was discussed chiefly on Lachmann's principles, but scholars came gradually to see that his theory did not explain the unity of the poems. In spite of all inconsistencies of detail in the story and differences in style and language, the careful, unprejudiced reader of Homer is more impressed by the indications of a great, masterful poetic mind and soul than by those of separate composition; while, on the other hand, all scholars now recognize that a certain independence was given to the parts of the poems, since only a few hundred verses were likely to be recited without interruption at one sitting.

The third stage of the Homeric question was reached in 1859, when Kirchhoff of Berlin applied to the Odyssey, which had been let alone by Lachmann's followers since it could not be divided into brief lays of any independence or even possible existence, the theory of an organic development from an original *Nostos*, or "Return of Odysseus," of 1,200 verses. Few scholars now doubt that we should seek not the complete, independent borrowed lay, but the source from which the poet drew. The free use of old material by the Homeric poet is quite certain, but can the older material be separated from the later elements? Fick of Göttingen, in 1883, under the influence of the theory now generally accepted that the earliest Greek epic poetry was in the Aeolic, not in the Ionic dialect, tried the experiment of reverting the Odyssey into Aeolic, and claimed to find that the portions which Kirchhoff had declared older submitted to the change without much difficulty, while the more recent portions were recalcitrant—thus proving, as he believed, both theories, that of Kirchhoff with regard to the composition of the poem, as well as that with regard to the dialect of the early Greek epic. The experiment was interesting, but the time had hardly come for a scientific translation into the Aeolic dialect, and the proof was not convincing. Other attempts to divide the poems into earlier and later elements on linguistic and metrical evidence have not proved satisfactory to scholars in general—partly, perhaps, because they were made too much under the influence of Lachmann's independent lays. Thus, Christ of Munich, in 1884, divided the Iliad into an original Iliad of about 4,500 verses and three layers of additions—many of these additions being by the author of the original Iliad.

Until last year no systematic attempt had been made in a large and thorough way to apply archæological tests for the determination of the relative age of different parts of the Homeric poems. The author of the Studies on the Iliad before us begins with a study of Homeric arms and armor, suggested by Reichel's 'Homerische Waffen' (1894, with a posthumous second edition in 1901). Reichel had shown

that the best illustration of the large Homeric shield, borne by a broad strap over the left shoulder, is to be found in Mycenæan works of art; that this shield was so heavy as to render the chariot almost a necessity for quick and convenient transportation of the chieftain and his shield from the camp to the field of battle, and from one part of the field to another; that the chariot in general was not used as a standing-place for the combatant; that the wearer of the heavy shield had no cuirass, and that his greaves were rather for the protection of his shins from the bruises of his shield than against weapons or missiles of the enemy; and that the helmet was a strong cap rather than a complete covering for the face and head. In the first edition of his book, filled with the joy of his discovery, Reichel was rather dogmatic and impatient in his treatment of what seemed to oppose his view, and would allow no use in Homer of the later bronze armor—cuirass, round shield carried on the left arm, and greaves. In his later edition, he was ready to accept a Mycenæan cuirass or tunic of cloth or leather, strengthened with small plates of metal; but death overtook him before he completed this section of his book.

Professor Robert accepts Reichel's proof that in certain parts of the Iliad the Mycenæan armor prevails, but believes that, in still larger portions, the later Ionian arms have been introduced. The earliest Homeric poet, in his view, was familiar with the Mycenæan armor and composed his poem (the "Urilias") in the Aeolic dialect. To our Iliad, then, a two-fold test is applied: The passages which have no Ionic peculiarities held firm by the metre, and in which the Mycenæan arms are used—these Robert presumes to have been part of the original poem; while those which abound in Ionic peculiarities, and in which bronze cuirass, round shield, and metal greaves are used, are indicated as of later composition. No single one of Lachmann's or of Von Christ's lays can be selected as a whole to belong to either class. The analysis must be more minute, and is intricate and difficult. Not infrequently a verse-tag or an ornamental epithet which belongs strictly to the later armor, seems to have taken the place of its metrical equivalent which was appropriate to the earlier armor, while, on the other hand, a later poet, in his free use of earlier epic material, may have introduced into his description of war as he knew it, with cuirass and round shield, a clause, or verse or verses, which assume the earlier arms. So, also, in the language—a clause or verse containing Ionic peculiarities may have found its place in a narrative which was originally composed in Aeolic, the story being modernized, as it were, by the introduction of epithets referring to later usage, while an Ionic archaistic poet may consciously have introduced into his story old formulæ or Aeolic forms, endeavoring to represent older fashions, well aware that the Aeolic was the old Epic dialect. So the test of our author is not so final and precise as could be desired, but it leads to some interesting results. Robert recognizes 2,146 verses as parts of the original Iliad, which he supposes to have comprised about 3,000 verses; the remainder having been crowded out at different times to admit the narrative of later recensions. The "Urilias," according to him, was revised and extended by three later poets.

In the original form of the poem, we are told, some nine or ten Achæan clans or tribes are represented. Only half a dozen Achæan chieftains have chariots. Fair Helen is barely mentioned. Achilles is the centre of the action. The gods do not appear in human form, and Troy has no temple. The most obvious criticisms on the poem thus secured are that it gives too little information as to the cause of the war and the persons of the chieftains, and that if the verses have been so much disturbed and rearranged as our author supposes, no one but the original poet could with certainty assign to them their several original places. The first reviser is thought to have been from Miletus, the second a Samian, and the third a Eubœan. The author not merely allows an historical basis for the Trojan story, but even supposes that certain Trojan families are exalted in the Iliad, since their descendants in Asia Minor were patrons of the poet. Some narratives of conflicts are supposed to have been transferred to the plain of Troy and the Iliad from earlier epics of Greece, so that some of the Homeric heroes are represented as falling before Troy when they originally fought against Seven-Gated Thebes or in the Calydonian boar-hunt.

The Homeric Question contains too many unknown or uncertain elements to admit of a final solution by such a work as that before us, but this scholarly attempt to secure a solution is not only interesting but stimulating, and is likely to advance the study of the original plan and early growth of the Homeric poems as no other has done for thirty years. The author is one of the most learned and judicious of classical archæologists, and has rendered many services to philology by casting light from archæology on the history of Greek literature. For the rendering of the "Urilias" into the Aeolic dialect, Bechtel accepts the responsibility.

A History and Description of Chinese Porcelain. By Cosmo Monkhouse. With Notes by S. W. Bushell, C.M.G., containing twenty-four plates in colors and numerous illustrations. New York: A. Wessels Co. Pp. xii, 176.

This book contains a serious attempt to give to the student what he most needs, whether he study Chinese porcelain in great collections to which he may have access, or begin the gathering of such treasures for himself. The requisite limitation of the book to one octavo volume, with illustrations that should not put it entirely out of the reach of book-buyers in general, is a restriction that must be clearly understood. It was at a price of five hundred dollars that the great book on Oriental porcelain, prepared expressly for the sake of the Walters collection in Baltimore, was issued. Mr. Monkhouse's endeavor was to give the history of Chinese porcelain in forty pages, and a descriptive account of its different varieties in a hundred and forty pages more, and he had prepared before his death the text (which was found complete) and the twenty-four colored plates. Dr. Bushell, then released from his duties at Peking, seems to have taken the book in hand, to have made a few notes which are initialled, and to have prepared the black-and-white illustrations, which are fairly good half-tones, fifty-four in number.

It is, perhaps, right to say that Mr. Monkhouse has been well known as a writer on fine-art subjects; and although his work was rather that of a literary man who is drawn toward art, his books, so far as our observation has gone, are good of their kind—of a kind from which strictly critical treatment of any subject is almost of necessity debarred, but in which trustworthy historical record is mingled with such general appreciation of artistic work as befits the contribution to a monthly magazine or a book for exclusively popular circulation. Dr. Bushell, on the other hand, is one who is in a sense technically well informed on the difficult subject before us—that is to say, he has made a study in China itself of the porcelains which came within his observation; as also (and it is thought profoundly) of the documentary history existing in the Chinese language. The history of the subject is extremely baffling, and has been the source of endless absurd assumptions made by the enthusiastic collectors of the past forty years. No one who has mingled with the dealers and their customers but is familiar with the bold assertions: "There, sir, that color has not been made in China since the twelfth century," and the like—assertions capable of giving great comfort to the speaker, who is generally the owner of the piece in question, and which certainly cannot be disproved. Loose and vague as is our knowledge on the subject, there is still a slowly increasing body of historical data which can be trusted; and if in the record here given, pages 13 to 48, there is little to justify the running title "Historical," and much, very much, which should rather be in the "Descriptive" part, as consisting of minute accounts, "by a Chinese connoisseur of the sixteenth century," of separate pieces known to him, yet a beginning is made of a really historical narrative.

It is to be said, moreover, that the text of this book is very readable indeed. The history is intelligible, and the constant reference to other authors shows plainly enough upon what foundations it has been built up. The descriptive part is necessarily of the nature of a catalogue, but this is interspersed with frequent critical and descriptive passages sometimes more than a page long, and all very interesting. We are brought, however, to the less admirable parts of the book when we seek to use it in a practical way, as, for instance, in trying to gain some information about a given vase or bowl. There is no index whatever; and if one thinks for a moment of the immense number of technical terms scattered through the "Descriptive" pages, and notes the intelligent explanations of those terms, the need of an index becomes very evident. The "Glossary" is only two pages long. Then, the illustrations have no immediate connection with the text. This seems a great fault, or at least a great deficiency. To be offered several hundred descriptions of pieces in an exhibition of the Burlington Fine Arts Club, in 1895, good and intelligible descriptions, too; to have added to this twenty-four colored plates with excellent descriptions in the way of legend, and, finally, a lot of photographs as above described, but to have these three forms of information wholly independent each of the other, without any system of cross-references, is a

shortcoming as great as that of the absence of an index. Perhaps but for the death of Mr. Monkhouse these inconveniences would have been removed. The best advice that the reviewer can give to him who would study this book is, to read it through carefully, and to cover the fly-leaves with pencilled notes of the passages which he wants to find again. Such private indexing may be carried even beyond the limits of the fly-leaves and cover linings. Even if you do for yourself the work which certainly author and editor should have done for you, you have the consolation that it will be not less but much more useful to you in that it has been work of your own. There is no "artificial memory" like that!

To have done with the shortcomings of the book, let it be noted that most undue praise is given in Dr. Bushell's preface to the colored plates. They are "three-color" prints, and as yet this process gives a not wholly satisfactory result—flat and thin, imperfectly defined, feeble in color. They are not bad as explaining the look of the piece, and the very fact that they are wholly photographic goes far to convince the student of their authenticity; but for beauty they can no more be compared with the splendid colored prints in the Walters book, to which, however, they *are* compared in the preface, than can the cheap colored work in our Sunday newspapers with the chromolithographs of Kellerhoven.

We have to say, finally, that nothing can be better than the critical tone of the book. It is insisted on throughout how completely the value of the ancient pieces is to be determined by their beauty—by their merit as pieces of "potting" and by the significance and value of their decoration—rather than by marks or supposed authentic dates, or by evidences of what is thought to be extreme rarity. The distinction between the finer ware with finer painting and the cheaper porcelains of which great quantities were and are made and exported to Europe, is well established and insisted on, as on pages 85, 86; and in connection with this there is the distinction, well made out, between that of the more dainty and decorative ware which is evidently intended for exportation to Europe, and that which the Chinese themselves care for. As we are continually brought up by the difficulty that the illustrations do not come where they are wanted, while yet so freely allotted to the book in general, so it is to be said here again that three or four pictures given on, or in face of, the pages named in the last sentence, or referred to from those pages, would make them useful indeed. Some of us know what is meant when there is mention of the pieces painted with European flower sprigs and known by the name of Lowestoft china; more numerous are they who can make out the veiled reference to what is called in our shops "Canton" and "Nankin" wares; but how good it would be to have this matter stated clearly and illustrated by well-chosen and plainly described pictures.

Napoleon: A Sketch of his Life, Character, Struggles and Achievements. By Thomas E. Watson. The Macmillan Co. 1902.

The quality of Mr. Watson's book on Napoleon will be most quickly apprehended by those who have read his 'Story of France.' Both works are written in the same style, are instinct with the same sentiments, and are based upon the same treatment of historical material. The style is dithyrambic, the sentiment is populistic, and the treatment of materials is eclectic. Napoleon, in Mr. Watson's eyes, was a man of the people, who rose high, and was not ashamed of his origin.

"When he, the Emperor, chosen by the people, stood up in his carriage on the streets of Paris, and pointed out to his Austrian bride the window of the room in which he had lodged when he came up from Brienne—a poor boy with his career to make—his pride in pointing to that milepost on the toilsome route of his promotion was that of all self-made men, was that of the man who scorns to win where he has not fought, was that of the robust conqueror who wants nothing for which he has not paid the price of manly effort."

Here, so far as we can make out, is the main reason of Mr. Watson's fondness for Napoleon. The Emperor was the product of the Revolution, and, by his beneficent legislation, he helped forward the cause of the masses. Thus, with all his despotism, he was a truly democratic leader, and great sins should be pardoned him. Much, of course, may be fitly said about Napoleon as the author of the Code, but Mr. Watson is wedded to this one conception, and his eclecticism consists in a choice of just such facts as will support a particular theory. Now to support a particular theory through thick and thin is to write, not history, but a polemical tract; and this is what Mr. Watson has done.

Vehement affections beget vehement dislikes. Mr. Watson cannot speak with patience of royalists, aristocrats, or English Tories. Whether from irrepressible zeal or from a love of composing rhetorical passages, he must burst forth at short intervals into denunciation or bitter sarcasm. Where a misdemeanor of Napoleon needs to be registered, the fact is quietly stated, and the narrative moves on. Where aristocrats or sovereigns are the offenders, Mr. Watson stops to castigate them well. "You go to France to-day, and you see around you, everywhere, Napoleon. You hear, on all sides, Napoleon. . . . Who does not know that the very soul of French memory for the past centres at the Invalides, where the dead warrior lies in state?" All this may be true, but Baron Coubertin is a good Frenchman, and a supporter of the Third Republic. In speaking of the Napoleonic sentimentalism which was affected by the Left under Louis XVIII., he says: "Unfortunately, the Opposition preached the benefits of liberty, and Napoleon had been a despot; the Opposition tended to fraternity among the nations, and Napoleon had been their oppressor." The idea that Napoleon was in any sense an oppressor of the nations seems to carry little weight with Mr. Watson. The sovereigns of this period are, indeed, fair subjects for facetious allusion, but that they had any just ground for opposing the extension of Napoleonic power is not admitted with sufficient candor. "And how had the wars commenced which Napoleon had inherited, and which he had never been able to end [1814]? By the determination of kings and aristocracies to check the spread of French principles, to crush democracy in its birth, and to restore to its old place organized superstition, class-privilege, and the divine right of kings." The assumption, it will be observed, is that Napoleon was anxious to give Europe peace. In close correspondence with this implication are words which occur in another place: "Never in Napoleon's career had the prayer of a vanquished foe fallen upon ears which heard not. The battle ended, he was ready for peace. He bore no malice, took no revenge. Splendid acts of generosity lit his progress from first to last." Even if we were willing to accept this extraordinary affirmation, something might yet be said for the Germans who fought against Napoleon in 1813. *Parcere subjectis et debellare superbos* is not a proclamation which readily commends itself to nations of the modern world.

Some time ago we followed Mr. Watson through one volume of his 'Story of France,' and found much fault with him in points of detail. His present book is also open to hostile criticism on the same ground, though it has been prepared with greater care. We do not wish to go through a similar analysis, for it would serve no good purpose; but we would point out that a writer must be pretty sure of his ground before he can afford to shaft his witticisms against "these recent biographers who dig and delve, and turn things over, and find out more about them a century after the occurrences than the men who took part in them ever knew."

Without being in any sense an investigator, Mr. Watson has read a good many books about Napoleon, and he always writes with animation. His liveliness is in many ways admirable, and we must confess that there is a stimulating note in many of his outbursts about freedom and social equality. On the other hand, his portraiture of Napoleon is marred by exaggeration, by the introduction of much that is irrelevant, and by the display of an almost personal resentment towards persons and causes that might have much to say for themselves. Such declamation serves to hide the truth and to create rooted prejudice in the minds of those who read one book on a subject, and one book only. Worst of all, in our opinion, is Mr. Watson's friendliness of attitude towards a union of Cæsarism and democracy. There is little danger just now to be feared from a recrudescence of the old régime, but there is always a lurking danger in the spread of the military spirit which, while cajoling with democracy, points straight to despotism. The French began in this way at Brumaire, and presently they were at Waterloo. After a while they began again at the *Coup d'Etat*, and this time the end was at Sedan.

An American at Oxford. By John Corbin. Boston: Houghton, Mifflin & Co. 1902.

The day after the publication of the Rhodes will, a London journal published a telegram from its New York correspondent announcing that the American papers were "preparing to discover Oxford." Mr. Corbin's offer of his services as the Columbus of this twentieth-century exploration is therefore exceptionally timely. His experience as a journalist, trained both to observe and to write, has greatly assisted him in producing this excellent record of personal impressions. Its graphic descriptions and general briskness are a consid-

erable compensation for whatever is lacking on the side of scientific thoroughness. The author's skill in the art of putting things is evident in many delightful touches; for instance, in his account of the college scout as standing to the undergraduate "in somewhat more than the place of a servant and less than that of a parent."

In these days of athletic enthusiasm, perhaps the most generally interesting section of this volume will be that entitled "Oxford Out of Doors." It includes a rapturous paper on the delights of punting, and a detailed comparison of English and American football, as well as track and field athletics. Mr. Corbin was much surprised at first by the easy-going methods of English training, and, although he has since come to see that there is an advantage in treating a sport as a sport, and not as a task, he still criticises unfavorably the distaste "for the careful preparation that alone enables a man to fight out a finish to the best advantage." He believes that whatever excesses are found in American sport would be mitigated by the division of our universities into residential units, corresponding roughly to the English colleges.

But it is the chapters dealing with the social life of Oxford that give this book its chief value. It would be difficult to find anywhere a more admirable account of the manners and customs of the English undergraduate. Mr. Corbin is especially emphatic in his commendation of the arrangements which give every freshman an opportunity of showing his qualities, in contrast with the "mob and cliques" system of Harvard. For the American defect in this case also he anticipates a remedy in the further development of halls and fraternities.

The section concerned with education proper will, perhaps, be of greater service in enlightening the English reader about the weak points of the American elective system than in giving the American an insight into the actual character of Oxford teaching. The more obvious features of the routine of lectures and tuition are satisfactorily described, but Mr. Corbin does not succeed in giving an adequate impression of the nature of the university examinations. He is, perhaps, handicapped by the fact that his own interests are mainly in English literature, a subject which, at Oxford, has been regarded, until quite recently, as a parergon. As a typical example of a final honor school he quotes the regulations affecting the honors examination in English literature. This school illustrates, it is true, the Oxford practice of grouping electives into a well-ordered and connected course, but it is as yet in the experimental stage, and the number of candidates in it is extremely small. The course of study which more than any other is characteristic of Oxford—classical honor moderations followed by the final school of *litteræ humaniores*—receives very imperfect treatment. The description of the latter school as having for its subject-matter "the mediæval trivium and quadrivium, plus modern philosophy," is scarcely short of ludicrous. Mr. Corbin is equally wide of the mark when he says that, "in England, a tutor may be a scholar, and usually is not." In fact, one of the chief weaknesses of the average English tutor, whether at Oxford or at Cambridge, has been and still is a tendency to attach extravagant importance to niceties of scholarship. It is by tutors, or ex-tutors—such men as Bywater, Jebb, Robinson Ellis, Liddell, and the Nettleships—that the best work in English scholarship has been done, and it is from college tutors almost invariably that professors are chosen, for chairs requiring scholarship, in the Scotch and Colonial, as well as the English, universities. Mr. Corbin's divergence from the general judgment is probably to be explained, partly by the fact that he uses the word "scholarship" to denote qualifications very different from those which it traditionally expresses, and partly by his failure to make allowance for that extreme self-criticism which makes many of the ablest dons reluctant to publish, and accordingly prevents them from gaining an outside reputation. While, however, Mr. Corbin has by no means supplied the American reader with a complete account of the educational methods of Oxford, he cannot fairly be accused of any lack of appreciation of the Oxford educational ideals. Indeed, he goes so far as to sum up his whole account in the verdict that, for the present, the elements of which American higher education has most need may best be assimilated from England, and that the adoption of these elements, superadded to those already imported from Germany, would make American universities superior to any in Europe.

A few minor errata deserve notice. It is not a little confusing to employ "fellow" sometimes in the English sense of "don," and sometimes in the American sense of "undergraduate." It is not the case, as implied on page 161, that only a few colleges have an entrance test independent of responsions. The particulars given on page 184 of the time allowed in preparation for various examinations are erroneous. For examination purposes the academical year consists of four terms, not three, so that in each case the latest date of candidature is much earlier than that stated by Mr. Corbin. The name "Broderick" (p. 204) should be "Brodrick." The "gentleman commoner" was not identical with the "commoner" (p. 238).

The twelve illustrations are excellent. There is no index.

Formal Gardens in England and Scotland. By H. Inigo Triggs. London: B. T. Batsford; New York: Charles Scribner's Sons. 1902. 118 plates.

Of all the publications that have accompanied the revival of the formal garden, none furnishes such a fund of accurate information about the planning of good old examples as does 'Formal Gardens in England and Scotland.' The reason for this superiority is not far to seek. Other books, as Sedding's 'Garden Craft,' have been concerned with the sentiment of the thing; others, as Blomfield's 'Formal Gardens,' with history of garden design; others, as Miss Amherst's excellent history, with the whole story of the garden and its contents; others, as Sieveking's, with the garden in literature; others, as 'Gardens Old and New,' with the photographic presentation of well-known examples; but it has remained for Mr. H. Inigo Triggs to show us, by careful measurement and clear delineation in plans drawn to scale, the actual facts of the extent and arrangement of many famous gardens. Photographs, indeed, accompany the plans, but the plans give the distinction to the book, and force us to think of it as doing for the gardens of England and Scotland (in a less complete, though one trusts more reliable, fashion) what the work of Percier and Fontaine long ago did for the gardens of Rome.

After seeing the many photographs of English gardens that have of late years reached us, and after having puzzled our heads about their plans and wondered greatly about their slopes and levels, it is a satisfaction to have at last the real facts presented in a plain and unpretending fashion, quite free from vagueness intentional or unintentional. Who among garden lovers has not tried to understand the lay-out of St. Catharine's Court near Bath, and who, from photographs, has been able to make it out even inexactly? Yet here, in our newest book, we have a plan no bigger than one's hand and a section but half as large, making clear at a glance all the seeming intricacies of the place. So it is with some of the hillside gardens of Scotland, Balcaskie or Barncluith, charming in their irregular formality, but scarcely to be known, to one at a distance, without a plan and section.

Perhaps it may be said that to know the exact facts as to a garden's arrangement is to lose an indefinable mystery, the secret of its half-discovered charm, and this is doubtless true if we think only of the enjoyment to be had from looking upon the finished work. But it is well to remember that here in America gardens are being multiplied on every hand, and that what we lack is not an easy admiration of old things, but an exact knowledge of how best to solve our problems. This we can get, or rather our garden-designers can get it for us, most satisfactorily by studying the ways in which the best gardens have been planned; and it is just because Mr. Triggs's book enables us to do this, as far as concerns English and Scottish gardens, better than any other book, that it should and will meet with a hearty welcome from all serious students of garden design. We must add that while it contains pictures of many delightfully quaint and interesting old gardens, such as those at Levens Hall, with its hornbeam hedges twelve feet thick, it is a pity that it should have included so many examples of stiff and inartistic formality as it does. The painful neatness and the unpleasant forms of the beds at Drumlanrig Castle, or in the so-called "Italian" garden at Wilton House, show how a garden may be utterly dry and devoid of all charm in spite of the utmost pains in making or keeping it.

A fair proportion of the space is given up to the accessories of gardens, such as gateways, vases in lead or stone, sundials, stairways, garden-houses, and the like—a notable collection, full of useful suggestions. The introductory essay, while it contributes nothing new to our knowledge of the history of gardening, is a clear and systematic, though brief, record of the progress of the art of gardens in England and Scotland from the earliest to the present time.

Letters to an Enthusiast. By Mary Cowden Clarke. Being a series of letters addressed to Robert Balmanno, Esq., of

New York, 1850-1861. Edited by Anne Upton Nettleton. With ten photogravure plates. Chicago: A. C. McClurg & Co. 1902.

The main pleasure to be derived from this book, which is very attractively made, is that of contact with so agreeable a personality as Mary Cowden Clarke. Sir Walter Besant suggests, in his recent autobiography, that the nineteenth century did not really begin much before 1840, sounding before that no characteristic note. Mrs. Clarke offers something in the way of confirmation of this theory. Born in 1809, she was a woman of the eighteenth-century type. She had its effusiveness, its warmth, its sentiment—if sentimentalism would be too harsh a word. To say that she sometimes gushes would not exceed the fact. She is a near relation of Fanny Burney and her precious Evelina. But she is so simple, so unaffected, so kind, so full of life and joy, that she is a delightful creature; and, if she cannot help calling Leigh Hunt and Charles Lamb "dear" almost every time she speaks of them, we do not care. Such a good heart is not so ordinary that every light offence should bear its comment.

Her *opus magnum* was the Shakspere Concordance, long indispensable, and still widely used, though surpassed by Bartlett's. Central to her literary activity, it was also central to the correspondence which this book preserves—on her side only, with the exception of her correspondent's first letter. Her resolve to make the Concordance was fixed one day when she was walking with Charles and Mary Lamb in their garden, and it was an engrossing task for sixteen years. Mr. Robert Balmanno of New York was so much pleased with the completed work that he wrote to Douglas Jerrold, begging him to get from Mrs. Clarke one of the slips she used in preparing it, promising two ounces of California gold in return. On receipt of the slip, he sent her two gold pens. The correspondence which ensued is that herewith presented. The correspondents never met, but Mr. Balmanno followed up his first gift with cedar tubs and a cedar chest, and finally with a large rosewood chair, of which a picture is given. This gift, however, he made jointly with a number of distinguished Americans, among whom were Bryant, Longfellow, Charlotte Cushman, and Daniel Webster. Webster's gold piece was sent over to Mrs. Clarke, and great was her delight to have a piece of money that had "passed through his hands," as if they had any aptitude for keeping what came into them. The big chair taxed her powers of grateful expression to the uttermost. Her first letter to Mr. Balmanno was addressed "To the American Enthusiast, New York City," but somehow it reached its destination, and the friendship was fixed.

Mrs. Clarke does her best to put her enthusiast in full possession of all the facts that he desires concerning her personal appearance, that of her husband and other members of her family, and their way of life. Her geese are all swans, and her husband the finest swan that ever was. She is her brother's favorite sister, and she and her husband "have long been noted for being married lovers." There is seldom a hard word for any one. Edwin Forrest, whose acting she had found highly amusing, fares worst—"an incredible ruffian"; but out of sympathy with Mr. Balmanno's chivalric part in the Forrest divorce case. For a devout Shaksperian Mrs. Clarke was a good Baconian, writing, "Just now we have a bit of Bacon for breakfast—Verulam Bacon, I mean. We are in a course of that fine, relishing old fellow, and racy and savoury and pungent and exquisitely choice do we find him on reperusal." The passage on "the droll school of young men who call themselves the Pre-Raffaellites" is rubricated amusingly in the recent memoirs of the brothers Dalziel, where it appears that Rossetti's illustration of Tennyson's "St. Cecilia" was too deep for the poet: he could find no excuse for it in his poem. Mrs. Clarke cannot agree with Mr. Balmanno that Flaxman is "the Shakspere of art," and there is nothing strange in that. It is interesting to find her asking her friend if he knows anything of a book called 'The Scarlet Letter.' Two of the chapters she scored with her pencil on every page. Some touches suggest to her a woman, but on the whole she is inclined to think the author a man. Her simultaneous admiration of Webster and Harriet Beecher Stowe's 'Uncle Tom's Cabin' imports that her knowledge of our American politics was not nicely critical.

There was a good stock of energy in her. The Concordance preface was signed in every volume by her own hand, and she wrote all the signatures at one sitting, writing from breakfast till sundown. There is a cordial greeting for Collier's emendations of Shakspere's text, with strange acceptance of "blankness of the dark" for "blanket of the dark" in Lady Macbeth's speech. In 1858 she edited an edition of Shakspere, and she writes pathetically of her troubles with the various readings; they flavor every meal; she cogitates them in her walks; she dreams of them in her sleep. Nevertheless, a year's time seems to have been sufficient for the task, and the fact does not imply immoderately exigent ideals.

There are pleasant glimpses of Mrs. Clarke's life on the Italian coast, and we find Mr. Balmanno extending his knowledge of geography by questioning as to whether Nice was on the island of Sardinia. His death occurred in August, 1861. Could we have had his side of the correspondence, throughout its length, the book would have been much more entertaining. He did not misname himself an enthusiast, and in Mrs. Clarke he found a woman after his own heart. She was grateful for his admiration, and rewarded it with an affection which, in its joyous freedom, had no taint of fault or fear. Charles Cowden Clarke, who was twenty years older than his wife, died in 1889. The wife outlived him nearly ten years, with great abundance of all that which should accompany old age.

The Life and Works of Friedrich Schiller. By Calvin Thomas. Henry Holt & Co. 1901.

It is a genuine pleasure to meet with a scholar of Professor Thomas's type, a man who, painstaking in his collection of material, cautious in his research, unbiassed in his judgment, sober in his conclusions, at the same time displays a decided individuality of his own, never loses himself in the mass of detail, and always takes the larger view of a subject. All these qualities, which perhaps may be summed up under the head of true common sense, Professor Thomas has thus far manifested chiefly as editor of classic German dramas, and although his notes and commentaries here and there, especially as regards Goethe's "Faust," betray a certain lack of the deeper poetic and philosophical insight, yet the fact remains that, on the whole, his editions are models of sound scholarship and appreciative criticism.

The present book, which for the first time shows him in the rôle of literary biographer, in every way confirms our previous impression of Professor Thomas's scholarly worth. It will not easily be superseded. Schiller has thus far fared ill at the hands of English writers. Carlyle's youthful effusion, noble and inspiring as it is, can of course in no way satisfy the more serious demands of our own time. Boyesen's and Sime's accounts, although agreeable and sympathetic reading, are essays rather than biographies; and the latest English Schiller biographer, Nevinson, is so far removed from a just understanding of his hero's character that one fails to see why he should have chosen to depict it. Professor Thomas's book is the first comprehensive account in English of Schiller's life and works which will stand the test of time. Based upon German scholarship, it is by no means a mere copy of a German model. Indeed, it would be hard to name a German biography which fulfils equally well the peculiar function of this book, namely, that of making Schiller live before our eyes.

In the first place, Professor Thomas is in real sympathy with his hero, and he consequently spares himself no pains to enter into his mode of thought and feeling. He accompanies him in his various moods and intellectual transformations; he follows conscientiously the many traces of literary indebtedness and influence; he observes him at work, wrestling with his conceptions and shaping his ideals; he rejoices with his triumphs and mourns with his failures; and even where, as in the case of Schiller's philosophical writings, he is not able to accept his views, he at least respects them. In short, there is a most refreshing note of personal affection in this book; a note which is perhaps all the more appealing because it proceeds from a somewhat caustic, matter-of-fact temper.

Secondly, Professor Thomas has historical perspective. He tries to revive not only Schiller, but his time as well; and he succeeds. Indeed, one might call this book a gallery of portraits from the end of the eighteenth century. The Würtemberg court of Schiller's youth, Dalberg, Charlotte von Kalb, Körner's circle at Leipzig, the society of Jena and Weimar, Goethe's and Schiller's friendship—these are some of the episodes and personalities in the portrayal of which is displayed the true art of historical narration; and throughout the book this same character is preserved.

Finally, the book has good proportions, and in this respect is superior to all German Schiller biographies save that of Wychgram. It can be enjoyed from beginning to end; and it is very much to be hoped that it will be read by many, particularly by large numbers of college students. It is wholesome food.

The Deer Family. By Theodore Roosevelt and Others. Macmillan. 1902.

This is the first of the ten proposed volumes which are to compose "The American Sportsman's Library." If the rest of the series are equally good, Mr. Caspar Whitney may well be proud of his success as editor. In the present volume, Mr. Roosevelt treats of "The Mule Deer or Rocky Mountain Blacktail," "The Whitetail Deer," the "Pronghorn Antelope," and the "Wapiti or Round-horned Elk." The introduction, by Mr. Roosevelt, gives some interesting information as to the nomenclature of wild creatures adopted in this country. The newcomers to America named many birds and animals from their resemblance, real or fancied, to those they were familiar with in the Old World. For instance, our so-called quail is not a quail at all. Our partridge is not a partridge, but a grouse, as are our Western birds known locally as fool hens, sage hens, and prairie chickens. The prongbuck of the plains, "an animal standing as much alone among ruminants as does the giraffe," is uniformly known as an antelope; "the American true elk and reindeer were rechristened moose and caribou, and the huge stag was called an elk." The bison was called a buffalo, which Mr. Roosevelt says "was no worse than the way in which every one in Europe called the Old World bison an aurochs." This is questionable, as the aurochs, or urus, meaning "wild ox," was the name in use in western and northern Europe by the natives of those parts before they had ever heard the word "bison," or "bonassus," or knew of the existence of the Greeks or Romans. Mr. Roosevelt allows, in addition to the so-called antelope, six wholly distinct kinds of deer in North America—the moose, caribou, wapiti, whitetail, and the two blacktails.

There are incidentally, in the introduction and throughout the book, strong appeals to humanity and moderation in sport. Mr. Roosevelt says:

"The best test of the worth of any sport is the demand that sport makes upon those qualities of mind and body which, in their sum, we call manliness. Wherever possible, he [the sportsman] should keep a notebook and should carefully study and record the habits of the wild creatures, especially when in some remote regions to which trained scientific observers but rarely have access."

The blacktail deer of the Rocky Mountains has now the greatest range of any member of the deer family, except the whitetail, although it is fast diminishing in numbers. It is still plentiful in some parts of Colorado, Wyoming, Montana, and over the northern line of the latter State in the British possessions. It is also found in Lower California and in the northern part of Mexico. There are in the book under notice several very instructive maps, contributed by Dr. Merriam of the Smithsonian Institution, which show the ranges in 1900 of the different deer of North America.

Following the long and interesting chapter on the blacktail deer, comes one on his smaller brother, the whitetail, or Virginia deer, the most widely distributed and plentiful of American big game. Mr. Roosevelt says:

"It holds its own in the land better than any other species because it is by choice a dweller in the thick forests and swamps, the places around which the tide of civilization flows, leaving them as islets of refuge for the wild creatures which formerly haunted all the country."

It will, unlike the blacktail, breed in conditions of limited freedom, and there are to-day not half a dozen States in the Union where the wild whitetail is not found. It flourishes with the most moderate protection, and is probably now more plentiful in New York and some of the Eastern States than it was twenty-five years since. There are still many deer killed by the very noxious and illegal methods of "crusting," when the snow is deep with an icy crust on top, through which the poor animals have to break at each step, and can easily be tired out and knocked in the head by a brute on snowshoes, or even without them. Hunting from a boat at night with a jack or light is also very destructive, and deer may thus be killed by any self-styled sportsman without the least skill or exertion; nor is either of these two qualifications necessary for success in the pursuit of deer driven to water by hounds, and shot from a boat rowed by a guide, who holds the unfortunate quarry by the tail while his partner in crime shoots it, at the other end. The ideal and sportsmanlike method of hunting the white-tail, and, in fact, all of the deer tribe, except perhaps the antelope, is by still hunting, and Mr. Roosevelt devotes considerable space to this interesting and really intellectual pursuit, conveying his instructions in a pleasing manner, and largely by narratives of his personal experiences, which have been varied and extensive.

Chapters on the prong-horn antelope and the wapiti, or round-horned elk, complete Mr. Roosevelt's part of the volume. A fact not generally familiar about the antelope is that "it is the only hollow-horn ruminant known which annually sheds its horns as deer do their antlers. Of course, only the horn sheaths are shed, leaving underneath the soft and bristle-haired new horn." The shedding takes place in the late fall, and, as the new horns harden in a few days, there is but a brief period during which any signs of the shedding remain. As the antelope is an animal of the open plains, and seems less able to adapt itself to changed conditions of life than any of the deer tribe, it consequently disappears before the advance of man in regions where the prairie land is limited in extent. Mr. Roosevelt, on pages 99 to 102, exhibits entertainingly the conditions which affect with great degrees of favor or disfavor the existence of various kinds of big game. The curiosity of the antelope is frequently his undoing, and though he has learned caution by experience, he may still, on occasion, be lured within shot by the waving of a red handkerchief or by the display of other unusual sights. The most exciting way of pursuing him is on horseback, and shots may thus be got on account of his general tendency to run straight on after he has decided on his course. This enables the pursuer frequently to cut across and head him off—as he dislikes to turn aside from the point towards which he is running.

Though fast decreasing, the antelope will doubtless survive the wapiti, whose range is but a small fraction of what it was fifty years since, and is rapidly growing less.

"Originally the wapiti was found from the Pacific Coast east across the Alleghanies, through New York to the Adirondacks, through Pennsylvania into Western New Jersey, and far down into the mid-country of Virginia and the Carolinas. It extended northward into Canada from the great lakes to Vancouver, and southward into Mexico along the Rockies."

A glance at Dr. Merriam's map of the range of elk in 1900 (p. 134) will show in how small a portion of this vast territory he is now to be found, and how timely is Mr. Roosevelt's appeal:

"Surely all men who care for nature, no less than all men who care for big-game hunting, should combine to try to see that not merely the States, but the Federal authorities, make every effort and are given every power to prevent the extermination of this stately and beautiful animal, the lordliest of the deer kind in the entire world."

The "Elk of the Pacific Coast," "The Mule Deer," and "The Columbia Blacktail" are the titles of three chapters contributed by T. S. Van Dyke, whose book, 'The Still-Hunter,' published in 1883, is easily the best on the subject ever written. That was mainly a work of instruction and a text-book, while this is perhaps rather broader in its scope, but still shows quite as intimate knowledge on all matters of woodcraft, of the habits of the animals described, and of the sportsmanlike methods of hunting them. No veteran and accomplished sportsman can read these chapters of Mr. Van Dyke's without learning something and feeling glad that they have been written. Lack of space prevents any extended notice of Mr. Van Dyke's excellent contribution as well as that of Mr. Daniel G. Elliot on "The Caribou," and of Mr. Andrew J. Stone on "The Moose." These are fully up to the high standard of the preceding chapters. The moose is to most hunters a rather more captivating animal than any other of the big-game species, except, perhaps, the big-horn. He is so large, so ungainly, and yet so keen of smell and hearing, and of such incredible activity in eluding and escaping danger, that one can't avoid respecting and admiring him. He lives in the greatest wildernesses in the New World, and, as Mr. Stone says, "To become a successful moose hunter is to reduce hunting to a science. . . . The art is one that can be acquired only by actual experience, and all that could be written for the uninitiated would be of but slight service." Mr. Stone gives a number of illustrations and measurements of moose antlers, the largest, of course, being from Alaska, and those from the Kenai Peninsula (the *Alces gigas*) of that Territory, surpassing all in size. The spread of the antlers shown is from 64 to 74 inches. A head from Canada or Maine of above 60 inches is rare, while the average is little over 50 inches. "Nine heads secured on the Kenai in the fall of 1900 averaged slightly above 65 inches."

The illustrations, chiefly by Carl Rungius, are excellent and appropriate, and the entire contents of the book bear evidence of having been written by men who have a loving and educated interest in their subjects.

The American Federal State: A Text-Book in Civics for High Schools and Academies. By Roscoe Lewis Ashley, A.M. Macmillan. 1902. Pp. xlv, 599.

Mr. Ashley's book is the most pretentious work on the government of the United States which has lately come to our notice; indeed, its size seems likely to restrict somewhat its use in secondary schools,

for whose needs it is particularly designed. The author's endeavor has been, he tells us, not merely to describe the organization and work of the several departments of government, national, State, and local, but also to show the relations of the citizens to the Government and to each other. This presupposes some understanding of the nature of government and the State, and of the steps by which our political institutions have come to be what they are. To the provision of this equipment somewhat more than a third of the body of the book is devoted. The historical outline does not attempt to tell over again the general history of the United States, but dwells on those events illustrative of the principles of political science and federal government which Mr. Ashley deems it important to enforce. Then follows an account of the organization and work of the various forms of government, with explanation of their interrelations, description of party organization and primary political machinery, and exposition of the duties and obligations of citizenship. Mr. Ashley shows skill in the selection of facts, and wisely leaves untouched a great mass of data which not a few writers and teachers have been led to regard, quite unwarrantedly, as "administration"; and while his treatment, particularly in the field of executive activities, shows no marked advance over that of his predecessors, the general presentation is clear, accurate, and sensible.

Questions of detail aside, the merits of a textbook commonly depend on the soundness of the principles on which it is constructed and its practical serviceableness in the classroom. As to the latter point, we can but think that, in the present state of historical study in this country, books like Mr. Ashley's will seem to many teachers not altogether successful attempts to cover two fields at once. The average high school is, we fear, likely to reject pretty much the whole of Mr. Ashley's historical section, and begin at once with the account of the national government, for the very practical reason that classes which have already had a systematic course in American history will not cheerfully go over the same ground again as a part of the study of American government. The reason suggests the answer to the other inquiry. While we are frank to say that, among recent manuals of civil government, Mr. Ashley's book has no superior, we are also bound to think that it is not the kind of book that has long been needed. What is still wanted, as it seems to us, is a book which will show the historical development of American political institutions as the ground of its description of their practical working. There can be no proper understanding of political methods without an understanding of the way in which they have come to be what they are, and this is not to be attained by setting forth certain general historical facts in one part of the book and descriptive facts in another. Mr. Ashley has not sinned more than others, and his book will certainly prove useful to many teachers, but we can but hold that it would have been a better book had it been of a different sort.

BOOKS OF THE WEEK.

Brinkley, F. Japan: Its History, Arts, and Literature, Vols. V. and VI. (Oriental Series.) Boston: J. B. Millet Co.

An Opinion *from John Dewey, Univ. of Chicago:*
Very few recent books in philosophy or psychology appeal to a more definite need than this book, or meet it more adequately. It shows upon every page marks of adaptation to teachers' and students' needs. Properly used in normal schools, I anticipate that it will become a most important adjunct to preparation for teaching.

NEW BOOKS FOR SUMMER READING

JUST PUBLISHED

THE SPENDERS

By HARRY LEON WILSON. Six Drawings by O'NEILL LATHAM. Price, $1.50.

This is a bright, spirited, brilliant story of men and women of to-day, of America East and West, of the people of the mining camps and the gay society of the metropolis.

NEW YORK JOURNAL says

"The ending is superb. The story sparkles with unusual brilliancy from beginning to end."

DOROTHY SOUTH

17TH THOUSAND

By GEORGE CARY EGGLESTON Author of "A CAROLINA CAVALIER"

Illustrated by C. D. WILLIAMS. Price, $1.50

BALTIMORE SUN says

"No writer in the score and more of novelists now exploiting the Southern field can, for a moment, compare in truth and interest to Mr. Eggleston. In the novel before us we have a peculiarly interesting picture of the Virginian in the late fifties. Characters are clearly drawn, and incidents are skilfully presented."

JUDITH'S GARDEN

By MARY E. STONE BASSETT

Illustrated. Price, $1.50

An exquisite, delicious, charming book, as fresh as new-mown hay. It will catch the interest of every lover of flowers, and will delight and comfort every reader.

THE GATE OF THE KISS

By JOHN W. HARDING

Illustrated. Price, $1.50

BOSTON JOURNAL says

"It can readily be seen that this is no mere conventional romance of Bible times, but a story of notable strength and boldness. It is a splendid tragedy. It marches irresistibly to its culmination."

MARGARET BOWLBY

By EDGAR L. VINCENT

Price, $1.50

THE LOUISVILLE TIMES says

"It is the wise author these days who puts the political thread into his or her story. No phase of American life is so virile or fascinating, and Edgar L. Vincent has incorporated it admirably in his book 'Margaret Bowlby.'"

'TWEEN YOU AN' I

By MAX O'RELL

Price, $1.20 *net*; postpaid, $1.35

This volume contains some of the choicest, wittiest, and most searching criticisms of life in general by this celebrated French writer and lecturer.

MR. WHITMAN

By ELISABETH PULLEN

Price, $1.50

NEW YORK WORLD says

"No synopsis can give any idea of the whimsical humor with which Mrs. Pullen tells this story. It is but a modest tribute to say that the author's style is as delightful as her plot is original."

FIVE LITTLE PEPPERS ABROAD

By MARGARET SIDNEY

Illustrated. $1.10 *net*. Postpaid, $1.25

DETROIT FREE PRESS says

"The youngsters will be delighted. Margaret Sidney has written a new Pepper story, which takes 'Five Little Peppers Abroad.' These books are prime favorites with children and deservedly so."

PUBLISHED JUNE 21

JEZEBEL

By LAFAYETTE McLAWS, Author of "WHEN THE LAND WAS YOUNG." Four Illustrations by CORWIN K. LINSON. Price, $1.50

RENSEIGNEMENTS GÉNÉRAUX.

L'Enseignement de l'Ecole des Sciences Politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du Directeur et du Conseil de l'Ecole; il n'ont à justifier d'aucun grade universitaire.

L'enseignement comprend un ensemble de cours répartis en deux années, mais la durée des études peut être étendue à trois ans. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

ANNEE SCOLAIRE 1902-1903.—L'année scolaire commencera le 10 novembre 1902 et finira le 6 juin 1903. On s'inscrira au Secrétariat à partir du 3 novembre 1902. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la Bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers)..... PAR ANNÉE: **300 fr.**

Une **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prepare.*

AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The NATION is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

The Nation.

NEW YORK, THURSDAY, JUNE 26, 1902.

The Week.

When Congress met last December, the new President was very strong with the people, and his championship of Cuban reciprocity seemed to assure the early enactment of the needed law. The Republicans controlled each branch of Congress by a good majority, and the party was supposed to be in a fair state of discipline. It was expected that the managers would frame a programme of action, and then carry it through with ease. There was no danger of harm from the Opposition, for the Democrats lacked inspiring leadership in both Senate and House, and they were united upon no definite policy on any of the great questions of the day. On the surface it appeared as though the majority had before them only a task which was simple for a powerful organization, and might soon go home to administer another defeat to the headless mob of Democrats. The end of the session, which is now within sight, finds a startling transformation. Party management has broken down among the Republicans of each branch. The Speaker and his Republican associates on the Committee on Rules in the House have utterly lost control of that body, which they had previously ruled with a rod of iron. They were beaten on the great issue of Cuban reciprocity by a revolt which has left them practically helpless. On the same issue, the older party leaders in the Senate—Aldrich of Rhode Island, Platt of Connecticut, and Spooner of Wisconsin—have been overthrown by a like revolt, largely promoted by the younger element, which used meekly to take orders from the seniors. Party discipline is at an end, and Congressmen will soon leave Washington to enter upon a campaign which has no accepted party policy as its sure base.

Afterthoughts about such a melancholy business may be bitter, but they are instructive. Where President Roosevelt made his mistakes must now be obvious even to himself. His first one was to take up with the notion that tariff relief for Cuba must be obtained by Republican votes. Party harmony he put first. But that meant the placing of himself in the hands of the party manipulators. That again meant endless delay, and the adjournment of an appeal to the people, over the heads of the politicians, until it was too late. It must be a cause of deep chagrin to Mr. Roosevelt to find, as he has done, that the rank and file of the party and the people as a whole were ready to stand with him in this Cuban business, and that if he had gone directly to the country betimes, he could have elicited a popular response which would have bent Congress before it. But he was beguiled by the party managers, and they have played him false. The supreme effort for party "harmony" has ended in an unexampled disruption, and Cuba is brutally and, as the President himself has said, dishonorably abandoned.

The latest reports from Cuba are all of the same tenor. Many sugar estates are suspending work, and the largest ones dismissing every employee who can possibly be dispensed with, while merchants and bankers everywhere report a growing stagnation of business. "The country is faced by financial destitution," reports the *Herald's* Havana correspondent, who adds that "it is folly to attempt to deny or refute the extreme precariousness of the situation." How long this state of affairs can continue without there being actual need of food among the poor people is debatable; but it is quite within the range of possibility that, within the twelvemonth, relief ships bound for Havana will leave New York just as the Red Cross and Government vessels carried food to the starving in 1898 and 1899. Should this take place, private generosity will be compelled to undo the work, not of Weyler or Weylerism, but of the Congress of the United States obedient to the wishes of the beet-sugar growers. This is a probability of the early future which must not be lost sight of in the current discussion of the Cuban situation. It is idle to talk of action at the next session of Congress as being in time. The mischief has been done, and it is all the more serious because the Cubans have been buoyed up and induced to make temporary arrangements by unceasing assurances that Congress would come to their rescue —*mañana*. There is, happily, not the slightest reason to believe that the people of the United States relish being put in the position of heartlessly driving a new-born neighboring nation into starvation and ruin.

Now that our Cuban Reciprocity Bill is strangled, the question becomes an important one whether Cuba can negotiate a treaty on similar lines with any other country. The first section of the Platt amendment says:

> "That the Government of Cuba shall never enter into any treaty or other compact with any foreign Power, or Powers, which will impair, or tend to impair, the independence of Cuba; nor in any manner authorize or permit any foreign Power, or Powers, to obtain by colonization, or for military or naval purposes, or otherwise, lodgment in, or control over, any portion of said island."

Does this provision prevent Cuba from negotiating a treaty of reciprocity with England, for example, whereby Cuban sugar should be admitted at half the present rates of the British tariff, and British manufactures be admitted at half the rates of the Cuban tariff—the full rates being charged on those of the United States? If this question were referred to the Hague tribunal for a decision on its merits, the answer would undoubtedly be that such a treaty would not impair or tend to impair the independence of Cuba. But a more important question is whether we should refer it to the Hague tribunal, or decide it ourselves in accordance with our own interests. Looking at it from the point of view of national good faith, it would seem entirely clear that, after the offer of reciprocity with Cuba had been presented to and rejected by us, we could raise no objection against a similar treaty between Cuba and any other country.

While Cuba might enter into negotiations for a treaty of reciprocal trade based upon a low duty on sugar, there are some practical difficulties on the side of England which would probably prevent his Majesty's Government from entertaining the proposal. In the first place, the British duty on sugar is needed for revenue, and if the question were raised of lowering any tax, the bread tax would have to come off first. Moreover, the British Government has entered into an agreement with the beet-sugar countries not to give any preferential rates to British sugar-growing colonies. This is one of the terms of the Brussels convention by which the export bounties of the Continent are to be abolished. Now England cannot grant preferential rates to Cuban sugar without ruining her own colonies, which are barely able to survive on even terms. And there is no other country, except possibly Spain, that could grant terms to Cuba in the way of reciprocity which would be of any real advantage to her, and that would not be much. Her present difficulty is most likely to be solved in another way. There is now presented an opportunity for political parties in the United States to run a race with each other for annexation.

One of the statements made by President Mitchell has a significance far wider than that he gave it. It is that, during 1901, the mines were in operation only 194½ days—but two-thirds of the working year. That is, in a time of great prosperity and unusual demand for anthracite, only two-thirds as much

coal was mined as might have been. Why was this? Why did not Mr. Mitchell's "magnates," greedy of gain as they are by hypothesis, work the mines to the full capacity? Obviously, there is but one answer. The production of anthracite steadily outruns consumption. That means that the marketing of hard coal is a precarious business; that the output has to be restricted, and distribution carefully planned—otherwise there will be a glut. And always the shadow of the increasing competition of soft coal falls upon the operators. So that it was into an industry thus nicely balanced, and so easily demoralized, that a labor-union ventured to thrust a disturbing strike which half its own membership felt to be unwise and unnecessary! Look at the matter in another way. Even in prosperous times the operators can work their mines but 200 days a year. That gives them a margin of 100 days for any strike. Until that length of time has elapsed, the enforced idleness of a strike is only that which the natural conditions of the business require. Thus the present strike might go on for fifty days more without really curtailing the year's product. This is only one of the many lights in which the strike appears the height of unreason.

The spectacle of Mr. Bryan calling Mr. Cleveland back to Democracy pure and undefiled is more amusing than edifying; but while the editor of the *Commoner* is on the subject of Democratic principles, he should be referred to the following, of which he appears oblivious: There were Democrats and a Democracy before Mr. Bryan, even if he is unable to see the pre-Bryanite kind, for whom Mr. Cleveland speaks. Another Democratic principle is this, that the majority rules. And when Mr. Bryan sees the Democracy of crucial States like Indiana and Illinois repudiate him and his political nostrums, he has nothing to do but submit and withdraw. It might be added that for the greatest party wrecker of modern times to accuse Mr. Cleveland of seeking the disruption of the Democracy, is somewhat in the nature of a compliment, for President Cleveland honestly took the chance of setting personal integrity against party solidarity, while Mr. Bryan has twice gathered his party round him in the same geyser of financial heresy, and has twice wondered why they were all blown very high, scattered very wide, and muddied exceedingly. He would be glad to try it again. The Democrats who have twice been hoisted with him feel otherwise, and such an expression of temper as his comment upon ex-President Cleveland's recent activity must be taken as an indication that even Mr. Bryan begins to see the Democrats are heartily sick of him.

The late Gen. Palmer used to say that he could count on coming into fashion in Illinois about once every ten years. This seems to be somewhat the experience in Pennsylvania of ex-Gov. Pattison, who, despite Quay's expressed intention to see to it that the Democrats nominate somebody who would be easy to beat, may be a candidate for a third term this year. Mr. Pattison was elected Governor in 1882, and again in 1890, and behaved creditably each time. Last year he headed the movement among Democrats which was a protest against Quay's debauchery of the minority party in Pennsylvania, and in so doing exhibited great vigor and courage. His candidacy this year would be one to which independent voters would find it difficult to refuse support, especially in view of the fact that Quay has accepted as a personal victory, as well he may, the nomination of Judge Pennypacker by the Republicans. It may seem surprising to speak of Pennsylvania as a doubtful State, but it is a fact that in the last five contests over the Governorship a Democrat has been twice elected, and that last year the Republican plurality was cut down to much less than half that polled in the Presidential year just preceding. This plurality of last year, according to the frank confession of the Philadelphia *Press*, was doubtless almost wholly due to fraudulent voting. If ex-Gov. Pattison is to run again this year, the chief issue will centre about the reform of the election system. Partly on account of the peculiarities of the Constitution, now amended, and partly through the evil influences of the Quay machine, Pennsylvania is far behind her sister States in safeguarding the ballot. There is no personal-registration law, no primary law worthy of the name, and election frauds are fostered rather than prevented. Despite the personal integrity of Judge Pennypacker, his election, with a Republican Legislature, would doubtless mean the continuance of the present election system, for it is the system on which Quay's power is based.

This is a startling story which comes from Illinois—that the white people in the neighborhood of a school for the education of black children have been trying to break it up; that the buildings have been injured, the crops destroyed, and the teachers and pupils driven in terror from the neighborhood on the eve of the commencement exercises; and that the pastor of the African Methodist Episcopal church in the town has been warned by a mob to leave within twenty-four hours, under penalty of death. This seems an incredible tale to come from the State of Abraham Lincoln, but its truth is conceded by the Chicago *Tribune*. The place is Eldorado, in Saline County, in the southeastern part of Illinois, and the school was a normal and industrial institute, after the model of Tuskegee in Alabama, designed to instruct young negroes in trades and agriculture. No less disgraceful are the reports which come simultaneously from Indiana, of the shameful abuse of blacks by whites in various parts of that State. There are two famous health resorts in Orange County, in the southern section of the commonwealth, where negroes have been employed as waiters at the hotels. Within a few days they have been warned to leave, and threatened with death if they attempt to stay. Adams County is in the northeastern part of the State, and some blacks recently came to Decatur, its chief town, mainly as domestic servants; but they were soon driven out by a white mob, which forced their employers to promise that they would never again hire a negro for any purpose. Politics does not appear to have anything to do with this matter, for although Adams County is strongly Democratic, Orange is safely Republican, and the same is true of Saline County in Illinois. What are the people of Indiana and Illinois going to do about such things as these? Will they content themselves with lecturing the whites of the South because the blacks are not treated fairly in that part of the country?

"Considerable surprise," the Manila dispatches say, was caused last week by the testimony of the ex-insurgent leader Malvar. He was called as a witness for Major Gardener respecting conditions in the province of Tayabas, and revealed to the astonished Americans that all their municipal governments there were really in sympathy with the insurrection. Every municipal officer, said Gen. Malvar, who was drawing pay under American rule, really took orders from this insurgent commander, and constantly furnished him with supplies. He went on to say that there was not one native in any of those towns truly friendly to the Americans. This is telling evidence, not only for the accuracy of Major Gardener's description of the state of affairs, but also for the continued existence of a pervasive and settled aversion to our rule throughout the islands. This is the element of the problem which should appall our Imperialists. A disaffected population of 10,000,000 we cannot hold in perpetual and sullen subjugation. There is no American way of governing people who obstinately and year after year, defeated and disarmed, but not dismayed, go on insisting that they are determined to govern themselves. If we are bent on subduing the Filipinos, our task is scarcely begun. We have yet to break the unconquerable will and turn obdurate hate to friendship; and we have neither the weapons nor the resources to accomplish that.

We should be glad to believe that Admiral Crowninshield is right, and Capt. Dayton and Consul Johnson wrong, in

the conclusions they have respectively reached regarding the conduct of the officers of the *Chicago* who were arrested and imprisoned for disorderly conduct in Venice. Admiral Crowninshield's finding is at variance with that of Capt. Dayton, and both are based upon the same evidence. The Admiral admits the loud noise and the upsetting of chairs and tables. He says that the conduct of the officers may have been indiscreet and lacking in dignity, but that the evidence does not show that they were noticeably under the influence of liquor. Whether a man is noticeably under the influence of liquor or not can be best determined by his noticeable acts. If two sets of judges differ on this question, people at a distance from the scene will be apt to consider the loud noise, the upsetting of furniture, and the want of dignity as evidence of a drop too much.

On the eve of his coronation, King Edward has been stricken with appendicitis in so serious a form that an operation became necessary. The official bulletin announcing the success of the operation will hardly lessen the general solicitude until there is some assurance that the royal sufferer is really beyond danger from surgical shock. Meanwhile his heredity and his own robust physique give good hope of recovery. It is now clear, in spite of official denials, that the King has for some days struggled against increasing disability, and that he had determined, rather than to disappoint his people and the guests of the nation, to assume the crown under conditions of great weakness and of actual pain, facing immediately after the coronation grave peril to health and perhaps to life. But no man may long resist a disease which gnaws at his entrails, and the King and his subjects must be content to receive, instead of the congratulations of their friends and the formal felicitations of their foes, the world's sympathy.

Highly significant was the declaration of the British Chancellor of the Exchequer last week, that the Government does not propose, by means of the grain duty, to revolutionize its fiscal policy, and, specifically, does not contemplate any system of preferential trade with the colonies that would entail a tariff war with other countries. This is the next high card which Mr. Chamberlain is obviously getting ready to play. But if Sir Michael Hicks-Beach and the other free-traders of the Cabinet are in the majority, as would appear from the Chancellor's statement, there will be nothing but a meaningless coquetting with the colonial Premiers. They would not turn their hands over for any system of all-British trade which did not involve serious discrimination against the commerce of other countries. But if the latter is ruled out, as Sir Michael says it is in advance, then the whole gaudy scheme of preferential trade within the Empire falls like a pricked balloon.

Lord Charles Beresford has long been the *enfant terrible* of the British navy and of the Conservative party. His present assault upon the Admiralty for extravagance and inefficiency is made as a member of Parliament; but, while still in command of the Mediterranean squadron, he had delivered similar attacks. In that course he was clearly insubordinate, as he himself confessed when the matter was brought up in the Commons, a few days ago. "I admit that I did wrong, yet I was quite right to do it," was his sailor-like simplicity in defence. While still Admiral, he had also arraigned his superiors in a speech before the Institute of Naval Architects, at the end of which he said defiantly, "If the authorities can prove what I say to be untrue, then they can turn me out of the navy by means of a court-martial." Another of his bluff indiscretions was his reference, during the Boer war, to the Prime Minister, the Duke of Devonshire, and Mr. Balfour collectively as "that ludicrous comedy called the Committee of National Defence." In spite, however, of his breezy, hornpipe manner, Lord Charles is an able man and a formidable debater; and, as he has reentered Parliament with the avowed purpose of rattling the dry bones at the Admiralty, the naval authorities will doubtless hear a good deal of uncomfortably plain speaking from him.

The total cost to England of the Boer war, including the estimates for the year ending March 31, 1903, is £222,974,000, or about $1,100,000,000. A pamphlet of the Cobden Club shows that this is sufficient to establish fifty universities, while Oxford and Cambridge are desperately poor and hardly able to keep their heads above water. This money has been spent "in the partial devastation of two British colonies, and the almost complete devastation of two neighboring republics." Of the money so spent £159,000,000 has been, or is to be, borrowed. The increase of taxation of the United Kingdom since the beginning of the war is £34,173,000 for the current year, and of this sum £17,600,000, or more than one-half, has been the increase of the income tax. This is the proper place to look for the means of carrying on a war, and we can understand how it happens that some of the titled classes, after footing their income-tax bills, asked to be excused from the coronation ceremonies on the ground of expense.

Tot homines, tot sententiæ, was once mistranslated, "He is as many men as he expresses opinions," and this motto for a versatile genius seems made expressly for the Kaiser, who sometimes seems to be as many men as he makes speeches. It is this pronounced histrionic character which largely constitutes the charm of the man for his contemporaries, and especially for his brothers in spirit, the journalists. In recent days, being at the historic castle of Marienburg, the former seat of the Grand Master of the Teutonic Order, he felt the spirit of the place, and virtually preached again the crusade against the Slavs and Lithuanians. It was a prime indiscretion in view of the present condition of the Polish question. Only the other day, in Aix-la-Chapelle, where the bones of Charlemagne lie and the city is redolent of ancient piety, he preached the gospel of peace, and declared religious faith to be the only foundation for an enduring empire. This shows a sense of environment which we usually associate only with the artistic temperament. It is certainly rare enough among rulers. Certainly one corner-stone speech of the present King of England has been very like another in glory, and the tendency of the age is towards a correctly uniform official utterance. The charm of the German Emperor, as well as his more striking defects, seems to rest upon an impressionableness which rulers seldom possess and still more rarely indulge. Such a view of his character will do much to disarm the mistrust of those who have required from him a consistency quite incompatible with the histrionic temperament.

The withdrawal of the Russian representative of the Tien-Tsin provisional government leaves the other allied commanders in an ungrateful position. So clearly is this seen that the Pekin correspondent of the London *Times* urges England to take the same step, with Italy and Japan, leaving to Germany the odium of fixing the conditions of retrocession to a Chinese viceroy. Such action would seem to be inadvisable, for whatever credit with the Yamen is to be got from breaking faith with the Allied Powers, Russia already has by right of priority. It is hard to see what the other commanders could win by a tardy disavowal of their agreement, unless it were the contempt of the Chinese. The action of Russia is in the highest degree astute. She wins at a cheap price the reputation for magnanimity, meanwhile retaining such an advantage that she can pay for her own magnanimity in Chinese land and trade at her own convenience and at her own valuation. Diplomacy has little new to learn in the article, *Slavica fides*, but such an incident as the withdrawal of the Russian contingent from Tien-Tsin certainly emphasizes the value and importance of the Anglo-Japanese alliance.

MR. CLEVELAND'S ADVICE.

It was fitting that the movement to revive the memory and to renew the teachings and example of Samuel J. Tilden in the Democratic party should look to Grover Cleveland for inspiration. Leadership in the party sense it must seek elsewhere, but it cannot hope to find a better type of leader, either in its past or its present membership, than in the person of the ex-President. Mr. Cleveland was elected Governor and President in the early eighties by virtue of his character, and not by means of skilful electioneering or the expenditure of money, or by tremendous efforts to "bring out the vote." He was chosen by his party, and the choice was ratified by the people, because it was the common belief that he could be depended upon to do the right thing in any emergency, and that he could not be pushed from the path of duty either by party leaders or by popular clamor.

Mr. Tilden was himself a man of this type, and it was for this same reason that he was nominated and presumably elected in 1876. Mr. Cleveland was the true successor of Mr. Tilden, but he has had no successor in the Democratic party—none who had both the qualities and the abilities to command a great following and to brush aside the opposition of spoilsmen, place-hunters, and corruptionists. Mr. Bryan, who became his successor in the leadership, is not a spoilsman or a corruptionist, but he has never commanded the respect of both political parties in the sense that Mr. Cleveland did and does, and hence could not win the independent and unclassified vote which was given to Mr. Cleveland. The movement at which the ex-President assisted on Thursday evening cannot be called a new Cleveland movement, but if it shall prove to be one of like purpose and intent with the Cleveland movement of 1884, it will be an omen of good cheer to the party to which he belongs, and to the American people as a whole. It is a pleasure to know that the audience received Mr. Cleveland and his speech with real enthusiasm.

In his remarks Mr. Cleveland confined himself to domestic affairs exclusively, and chiefly to Trusts and the tariff. On these subjects he said:

> "Democracy has already in store the doctrines for which it fights its successful battles; and it will have them in store as long as the people are kept from their own, and just so long as their rights and interests are sacrificed—by favoritism in Government care; by inequality in Government burdens; by the encouragement of huge industrial aggregations that throttle individual enterprise; by the reckless waste of public money; and by the greatest of all injuries, as it underlies nearly all others, a system of tariff taxation whose robbing exactions are far beyond the needs of economical and legitimate Government expenditure, which purchases support by appeals to sordidness and greed, and which continually corrupts the public conscience."

"What! has he come back to the tariff?" is the exclamation of the Republican newspapers. Yes, and he is not the only one. Notwithstanding the seeming indifference to that subject which the Washington politicians assume, there is nothing which gives them so much anxiety at this moment as the tariff, and the industrial combines which are based upon it. Chairman Babcock, with his bill to repeal the duties on monopolized articles, represents a mighty political force lying between the Pacific Ocean and the Great Lakes, which may be turned against the Republican party at any moment. It is composed of both farmers and manufacturers—farmers who see the prices of iron and steel in all forms rising while their own products are either stationary or falling in price, manufacturers who are looking for foreign markets for their surplus productions, and who have repeatedly but vainly asked for the ratification of McKinley's reciprocity treaties.

Both these classes have read in the newspapers how billions of dollars are tossed this way and that way in the consolidations and combinations and stock-watering jobs of the present day. They believe that in most cases these operations are made possible by the tariff, which excludes competing goods from foreign countries. They have been so told by many Republicans besides Chairman Babcock. Even the late Senator Sherman so said to them when he was at the maximum of his powers, and he too said that he would vote to repeal every duty behind which a Trust had taken shelter.

The beneficiaries of this system reply that the rise in the prices of protected articles is due not to the tariff, but to business conditions at home, and that this is especially true of steel and iron products. This may be true. It may be true also that there would not be much importation of these things even if the tariff were repealed; but this goes to show that the tariff is unnecessary, and that it is kept merely to prevent competition at some future time when conditions shall have changed. In one way and another, the opinion has gained lodgment in the Northwest and in the far West that the East has obtained an artificial advantage over them in the distribution of the national earnings and of the national wealth, and that this is due in part to tariff legislation. This is what Chairman Babcock stands for; and what he says, a great number of Senators and Representatives feel. These facts explain the recent caucus at the White House at which the question of tariff reform was considered. Mr. Cleveland has merely given public utterance to what both parties are deeply pondering, and it is even possible that more Republicans than Democrats are lying awake o' nights thinking about it.

It is only natural that the professional politicians should make light of Mr. Cleveland's return to active politics. They know the weight of his heel, and he knows the secret thrust of their knives. Friendship between them there cannot be. But the regeneration of the Democratic party, which is so earnestly to be desired, is not likely to come through Mr. Sheehan, or Mr. Hill, or Mr. Cantor, or, in fact, through any of the leaders at present in sight. These may render a valuable service, but only on condition that they stand ready to serve loyally the new leader which the now disinfected and de-Bryanized Democracy must soon produce. Such loyalty is scarcely to be expected from Mr. Hill; and the belittling of Mr. Cleveland's share in the party councils bears every mark of his inspiration. But Mr. Cleveland's influence is of a kind which Mr. Hill can do little to minimize. The former's strength is with that remnant which, through all aberrations of the organization, has held fast to Democratic principles. He represents that historic morale through a revival of which alone the Democratic party can became fit either for effective opposition or for government. As the *Tribune's* Washington correspondent says: "The Democratic politicians here, the great mass of whom were hurled into place and power by the convulsion of Bryanism in 1896, are unable to make noise enongh to drown out the response of the country to the ex-President's appeal."

THE BEST CANAL ASSURED.

There can be no doubt that the House will say ditto to the Senate, in the matter of the Isthmian Canal Bill, and that, accordingly, the Panama route will be adopted by the Congress of the United States. Thursday's vote in the Senate followed a long and exhaustive debate, in which all the facts available were clearly set forth. The previous action of the House in designating the Nicaragua route was taken in haste and ignorance, before the final report of our Canal Commissioners had been made public, and should not stand, nor will it, against the deliberate decision of the Senate. In choosing Panama, Congress will only be bowing to the opinion of the country as well as of expert engineers.

How sweeping a revolution in public sentiment this final decision represents is within the memory of all. For many years the Nicaragua motley was the only wear in this country. No other route was talked about or thought of. As recently as 1899, to so much as mention Panama was to expose yourself to derision or insult. The *Evening Post* was the first and for a long time the only American newspaper of any consequence to maintain that the Panama route was the better—and well hooted at it was for its simple-mindedness, or else its venality. It had superior good for-

tune in early getting possession of the material which showed the strength of the Panama case. It was lack of familiarity with this which made the American press and public so daft on the subject of Nicaragua. The latter word had a kind of sacred authority and blessedness. Panama was a thing of hissing and contempt. No wonder, therefore, that it was difficult, and took years, to get people to look calmly into the merits of the Panama Canal. Once attention and impartial investigation were obtained, fair-mindedness and the weight of argument did the rest. The result we now see.

We consider it one of the most gratifying triumphs of reason over prejudice that this country has ever seen. The Nicaragua route was not so much a project as a mania, a cult. We see, in the case of Senator Morgan, how it became bound up with the deepest religious beliefs. In his eyes, to-day, the American people stand convicted of national apostasy in having abandoned the true Nicaraguan faith. Yet his enthusiasm was only a little more extravagant than that which afflicted nine-tenths of our population but a little while ago. Nicaragua seemed impregnably intrenched. Both political parties were for it; the press was almost a unit in advocating it; a formidable array of engineers and military men stood for it, and it was backed by powerful financial interests. Yet the whole frowning fortress has now been battered down by simple common sense. Expert opinion was first won over. The International Technical Commission made a report in favor of Panama in 1898 which had a great effect on all engineers. Then followed our own Commission, whose researches on the spot first resulted in the conversion of some of its members—Admiral Walker notably—and slowly and in the end led to the great revulsion of sentiment which had its crowning demonstration in the vote of the Senate last week. It is a fine and inspiring example of what the persuasive power of truth can do with a democracy. We Americans have not, perhaps, that swift lucidity of which the French boast, but we have, at any rate, as the final choice of the Panama route proves, a practical love of the truth and a business capacity—a "horse sense," let us say—which work well in the long run. The success won by steady hammering in this affair of the Isthmian Canal should be an encouragement to every reformer with a good cause and sound arguments. They will come to their own with the American democracy, granted time and patience.

That the canal would be built was long ago assured; now, we have every reason to believe, it will be built at the best location and within the shortest time. We will not again go over the case for Panama superiority. It was stated admirably, and in a condensed form, by Col. Hains of the Commission, in a communication to Senator Hanna which was read in the Senate on Wednesday, and which we reprint for its compact force:

"The considerations that determined my decision in favor of the Panama route are:
"(*a*) Shorter length of canal.
"(*b*) Fewer and less difficult obstacles to be overcome.
"(*c*) A more thorough knowledge of the physical difficulties.
"(*d*) The less total amount of curvature.
"(*e*) The more moderate degree of curvature—that is, the greater proportionate length of canal that approaches a straight line.
"(*f*) The lower summit level. It will be necessary on the Nicaragua route to raise and lower ships to a vertical height of 104 feet, while at Panama the lift is only 82 feet, an advantage of 22 feet in favor of Panama. Moreover, the height could be still further reduced at Panama, but it cannot be reduced at Nicaragua.
"(*g*) The greater ease with which the level of Lake Bohio can be regulated as compared with Lake Nicaragua. The level of Lake Bohio is regulated automatically, and water taken from it for regulation is taken at a distance from the sailing line, whereas in Nicaragua the regulation is necessarily effected by a system of sluices worked by man, and the water, instead of being taken from the lake direct, is taken through a long stretch of river which is used by navigation. This will produce currents in some of the bends, which navigators would prefer to avoid.
"(*h*) The largely diminished cost of maintenance.
"(*i*) The belief that, if the United States builds a canal at Panama, a canal in competition would never be built anywhere else.
"(*j*) Because the actual time of transit will be less.
"(*k*) Because the dangers of temporary obstruction are less in proportion to the length of the canal.
"(*l*) Because a railroad is already constructed and fully equipped."

These were the arguments which converted Col. Hains and all the other experts whose prepossessions were in favor of Nicaragua. It is reasoning which will satisfy the country. The Spooner substitute for the Hepburn bill was carefully and skilfully drawn, and there is every prospect that, under its terms, all the preliminary work of taking title from the Panama Company and ratifying the treaty with Colombia will speedily be got through with, and the actual digging of the canal under American control begun. Then will the dream of a hundred years take on the semblance of reality.

THE MINERS' DEFENCE.

One comment on the statement of the Mine Workers, published on Monday morning, must rise to every lip: it is inexcusably belated. Whatever else may be said of it, this may be said—it is six weeks overdue. President Mitchell is uneasily aware that he is too late with his defence, but his excuse for delaying it only heightens the awkwardness of his bringing it forward at this hour. If his "plain unvarnished facts" were at his command when the strike was ordered, why did he not then give them to the light? A decent regard for that public to the sympathy of which he appealed, and on which he was proceeding to inflict so great inconvenience and loss, should have made him prompt and explicit with his statement of grievances. To-day it necessarily wears the air of an afterthought. Even as such, however, it requires candid examination, for it is certainly temperate in tone and plausible in sound. To the careful reader it will appear, we think, to be a mixture of a small amount of well-founded complaint, and no little confession and avoidance, with a great deal of fallacious reasoning and an inability to see, or unwillingness to admit, the real motive of the strike and the true explanation of the refusal of the operators to arbitrate.

To begin with the valid parts of the case, we are bound to concede, as in fact we have done from the first, that the increased cost of living during the year past might well have made the miners discontented with a stationary wage. This has been to very many the seamy side of our lauded prosperity. A fixed salary, combined with advancing prices of food and clothing, has been the unhappy lot of thousands during the "boom." One could have wished for a more exact miners' budget than Mr. Mitchell gives us. He states the increased cost of living at between 30 and 40 per cent., which is doubtless too high and certainly too vague; but we are prepared to believe that enhanced expenses have, in reality, fully eaten up the increase in wages and the steadier employment which the miners enjoyed last year. Nor can we doubt that the mixing up of the railroad business with that of mining does, as President Mitchell asserts, lead to a good deal of bookkeepers' juggling, and makes it very difficult to say just what the actual cost of production is in the case of anthracite coal. Finally, we believe that the miners have had a just though minor grievance in the method of weighing their coal at the pit's mouth, open as it is to abuses at their expense.

But when all this has been allowed, the strength of the miners' defence is exhausted; and even this strength has been practically destroyed by their reckless course in striking first and telling why six weeks afterwards. If the case of the miners, including only the points now mentioned, had been freely made public on May 1, we think it would have put the operators to their trumps. They would have had to make an absolutely crushing reply in order to carry popular sympathy with them in their refusal to arbitrate. At present, however, the statement comes too much as the despairing resort of alarmed leaders, who see their cause crumbling, and who have to say something to justify their conduct in forcing a strike which at least 40 per cent. of the employees were opposed to beginning. All this can but confirm the general conviction that this half-hearted strike was undertaken in

secret hopes that have proved delusive. The leaders really counted upon political influence to help them, as it did in 1900, or else upon uninstructed sentiment, or even popular hostility to Trusts. When all these fail them, they put out an explanation of their course which not only is fatally late, but has an unfortunate appearance of not being wholly sincere.

As to the statistics of coal-mining which President Mitchell proffers, we can only say that his averages, derived from Government reports, will not stand, in the judgment of the fair-minded, against the figures actually shown on the books of the companies. The latter were put at the service of the Union. Why did not President Mitchell accept the offer to inspect them, which he admits had a "reasonable" appearance? The skilled accountants in the employ of the Reading Company undoubtedly have the figures to justify President Baer's assertion that the individual efficiency of the coal-miner fell off 12 per cent. in 1901. To show, from the reports of the Geological Survey, that slightly more coal per man was mined does not at all meet the case. The Government's statistics cannot, in the first place, be held to be more accurate than the Reading's. It is a rule with careful statisticians to prefer, in many departments of production, the figures of private concerns to those gathered officially. Besides, an increase in labor-saving devices might account for the apparent increase of coal mined per capita, even with a really diminished efficiency by the individual miner. But none of these things are dreamed of in President Mitchell's philosophy.

Nor does he seem to be aware of the powerful motives the operators have for declining to submit to the dictation of his union. They wish to destroy organized labor, he cries. But there are organized labor and organized labor, good unions and bad. The evidence is overwhelming that the Mine-Workers' Union is one of the bad ones. It is a heterogeneous and unruly affair, not scrupulous in keeping its contracts, unable to control its own men. More than 100 strikes occurred during the past year of "peace" with the Union, and these President Mitchell had to confess himself powerless to prevent. Moreover, the Union has made anything like discipline at the mines impossible. The terror of "organized labor" was over the head of every foreman and owner. The reply, made to a distasteful order: "Go to ——; you ain't my boss; John Mitchell of Indianapolis is my boss!" is not an imagined, but an actual one, writes Prof. R. W. Raymond, and it represents the general situation very fairly. To ask that the operators "recognize" such a union —and if they did not yield to its every demand, they would be accused of unwillingness to recognize it, and a determination to crush organized labor—is the height of absurdity. First produce your union that is one—not an incoherent and uncontrollable mass—and it will be time to talk about hostility to trades-unionism as such.

The restlessness of laborers, their apparent willingness to strike without measuring properly either the reasons for the action or its consequences, have convinced us from the first that the anthracite operators must fight out their battle, and, for the time at any rate, settle the question at the mines. That its settlement there would settle also the exasperating annoyances inflicted on trade in other quarters, is too much to hope. But of this at least we are sure, that victory by the laborers, in a contest begun and carried on as the anthracite strike has been, would have the most serious reflex influence on the general trade situation. We believe, in short, that the kind of demonstrations in which labor has lately been indulging must be checked, unless the public wishes to see some very grave consequences in the future. There is nothing astonishing in the fact that the business men at Scranton should have organized "law and order committees" to resist the interferences of the strikers. With the Union not only forcing the bulk of these merchants' customers into idleness, but threatening business ruin on any merchant who should sell goods to an engineer or pumper still at work, the movement towards breaking down the safeguards of society was pretty far advanced. Had such application of the power of proscription been tamely submitted to, it is difficult to see where the mischievous work need stop. What, it may be asked, would deter the Union, in case of a sympathetic soft-coal strike, from extending the boycott indefinitely? If the mines could not all be closed, and if foreign soft coal kept coming in at our seaports, attacks of this sort on every one dealing with the miners, the importers, or the dock hands—or, indeed, with such misguided householders as should use "non-union coal"—would be a most logical suggestion. We leave the reader to trace out for himself the possible ramifications of such a movement. The public, it will be said, would rise, in the face of such provocation, and force the courts and legislatures to protect its rights to a peaceable existence. But it is not the part of wisdom to yield to continually increasing oppression until the yoke has become too much for human endurance.

LIQUOR LEGISLATION IN VERMONT.

The unusually spirited contest for the nomination for the office of Governor of the State of Vermont was in part the result of personal antagonisms. But its chief significance lay in its disclosure of very deep-seated and widespread discontent with the laws affecting the sale of strong drink. Vermont has had a prohibitory law for fifty years, and it has been supposed that nowhere did such a law receive more unanimous support. There are few large towns in the State, and the Legislature is completely controlled by the representatives of the farmers—themselves generally farmers. The Republican party is the "respectable" party—in fact, the only party—and it has been identified with the prohibitionist element from the outset. Whatever laws the "temperance" people demanded were enacted, and their cause seemed to be triumphant. Hence the appearance on a platform opposed to prohibition of a candidate for the Governorship who in a few weeks, although spending little money and personally unpopular, won more than one-third of the delegates, and came near winning a majority of the convention, was a very startling occurrence.

Yet it by no means indicates that there has been a change of feeling, in regard to the sale of liquor, among the people at large. There are two or three considerable towns where a majority of the citizens would probably vote to license the sale; but this would have been true for many years. The habit of drinking, among reputable people, is not increasing; those who like to drink still think that the common people should be prevented from drinking. The explanation is to be found in the nature of the prohibitory law, which may properly be described as outrageous. It is probably unconstitutional in several respects. It violates the fundamental rights of citizenship. It promotes perjury. It demoralizes juries and prosecuting officers. It corrupts magistrates and constables. It burdens the counties with heavy costs; and, in towns of any size, it completely fails to stop the sale of drink. No town, it may be asserted positively, can maintain itself as a business community without an inn; and no inn, it may be said almost as broadly, can maintain itself unless it supplies the ordinary wants of its guests. The towns of Vermont, however, are as well supplied with inns as towns of equal size in other States. In one town of less than 2,000 inhabitants three or four men engaged in the hotel business lately fled from the State in one day because of the unexpected activity of a judge; but no one thinks that their business will not be carried on in the future as in the past.

The original prohibitory law was bad enough. It authorized constables to enter dwellings or other places without warrant, and seize liquors found there. It commanded persons arrested for being drunk to disclose under oath the name of the person from whom they obtained liquor, and empowered any justice of the peace to commit to jail a prisoner who refused to disclose it. These provisions cannot be reconciled

with the Constitution of Vermont, which provides that "the people have a right to hold themselves, their houses, papers, and possessions, free from search or seizure"; forbids warrants unsupported by oath, or not directing a particular officer to make search, or directing the seizure of persons or property not particularly described. Nor is such a law consistent with the Constitution of the United States. It conflicts with the article forbidding unreasonable searches and regulating warrants, and with the article prescribing the method of criminal prosecutions. Under this statute a complaint need allege only that the respondent sold liquor "at divers times," and it was not necessary to specify the kind or quantity of liquor, "nor the nature, date, or place of the offence."

It might seem that such a statute would have satisfied the most fanatical. It disregarded the most cherished traditions of our race; it introduced paid spies and informers; it employed inquisitorial methods of trial abhorrent to the common law; it imposed enormous fines; it enabled any inferior court to imprison citizens for indefinite periods; it even provided heavy penalties for failure on the part of the officers of the State to exhibit due zeal. Under it, offenders owning property were reduced to poverty; one impecunious wretch was sentenced at the age of sixty-seven to pay fines which were infinitely beyond his ability, or be imprisoned for nearly fifty years.

But the fanatics were as insatiable as the supporters of the Holy Inquisition. They were enraged to find that drunkards, when compelled to inform on oath, perjured themselves; that constables and State's attorneys made corrupt agreements with liquor-sellers; that grand jurors refused to indict and petty jurors to convict. Men were tried for ten offences, all proved by the same evidence, and juries found them guilty of but one. The possession of a United States license was made evidence of violation of the State law, and juries with the licenses held before their faces acquitted the prisoners. In their desperation, the fanatics overleaped all Constitutional restraints. They passed a law authorizing any constable to stop men and women on the highway and search their persons, whenever he "suspected" that they had the accursed thing in their possession. They passed another law forbidding the payment of their compensation to the officers of the State unless the judges of the Supreme Court were satisfied that they had discharged their duties with zeal. And, finally, in direct defiance of the Constitution, they abolished the right of trial by jury.

This step was taken by the prostitution of the Court of Chancery. Every place where liquor was unlawfully sold was declared a nuisance, to be abated by a proceeding brought by the attorney for the State, or by the Chancellor, of his own motion. That officer is now directed by statute to proceed, in term or in vacation, with or without affidavits, against such persons and places as he thinks fit, or on such complaints as he regards as satisfactory. "General reputation" is declared by law to be presumptive evidence of a nuisance, and the maintenance of the nuisance is to be enjoined as a contempt of court. The Chancellor may, therefore, hale before him whom he pleases, without indictment or specific complaint, enjoin him, fine him not less than $500 for contempt, and commit him to jail. And this in the face of the Constitutional provision that in all prosecutions for criminal offences the accused has a right to be tried by an impartial jury of his peers, without whose unanimous consent he cannot be found guilty. No wonder that when this scandalous perversion of our institutions culminated, as it did recently, in a homicide by a spy and informer, the wrath of conservative citizens boiled over. Such excesses, committed in the name of temperance, have created a determination to do away with the present statutes, no matter what is substituted. They are enough to make all men sympathize with the good bishop who declared that if the choice must be made between England free and England sober, he should give the preference to freedom. But the subversion of the safeguards of liberty in Vermont has not brought with it sobriety.

RECITATION OR CANTILATION?

Whether poetry should be recited in the speaking or chanted in the singing voice is matter of old debate, and precedents enough could be cited for either view. The matter comes again within the range of public interest through the recent controversy between a distinguished Neo-Celtic poet, Mr. W. B. Yeats, and an eminent symbolist, Mr. Arthur Symons. Mr. Yeats has proved his convictions by having "psalteries"—some simple form of musical notation for the reciter—prepared for his poems, which are now being cantilated in England by an accomplished elocutionist. Mr. Symons demurs to this method, on the ground that a musical arrangement of pitches for recitation greatly limits the range of individual interpretation. As if to confirm Mr. Symons's doubts, Herr Possart's renderings of poems to the musical settings of Richard Strauss have recently failed signally in London, despite the justly great reputation of this renowned tragedian. But this only proves that the British public is indifferent to this form of musical declamation, which, in many persons' opinion, would be a strong argument in its favor.

The matter concerns all those who find pleasure in poetry, for the chanting method promises a higher enjoyment than can be had from recitation in the speaking voice. Now it must be recalled that declamation upon a few simple modulations and with an instrumental accompaniment is no new thing. We have it for a very special use in the intoning of the church service, in recitative passages in opera, in the chanting delivery of certain orators and actors—the elder Bellew was a striking exemplar of the method. So much for its æsthetic uses, which are all, it will be felt, of a very restricted sort. Furthermore, cantilation is a favorite expedient of melodrama and pantomime. No villain pursues a heroine except to a tumultuous accompaniment; and no just, or merely repentant, person expires except to slow music. Similarly in pantomime, when the benevolence of the Good Fairy becomes too emotional for mere song or mere speech, the orchestra intervenes, and such throbbing lines as—

> "Fair Princess, I will guard thee well,
> Fear not Malvino's fatal spell"—

are invariably recited in a third manner, which can only be described as cantilation, with a close regard for some reminiscence of Handel's Largo—the incidental music. But it must be said that such effects are not greatly valued by the judicious.

Better witnesses to the value of chanted verse would be the considerable success of the recitals of Shakspere and Tennyson by Mr. Riddle and Mr. Lang, the very poignant effect of, say, Yvette Guilbert's crooning of popular songs, and the personal practice of certain notable poets in delivering their own lines. Tennyson, as every one knows, groaned and rolled out his own verse in modulations which the cynical found intolerable and the simple-minded vastly impressive. Swinburne, an acknowledged master of rhythmical English, is said to affect a similar orotundity. But most men, and even poets, are notoriously bad counsellors in their own affair, and one would be reluctant to derive a general principle from a personal idiosyncrasy due possibly to embarrassment.

Of course Mr. Yeats and Herr Possart and Mr. Riddle might appeal to the universal custom of antiquity. There was a time, probably, when all poetry was sung to tunes as simple as those which are still heard in "traditional Irish singing." In fact, the recitation of poetry without music presupposes almost as advanced a civilization as does the reading of poetry. But it should be remembered that this is a very different matter from the reform proposed by Mr. Yeats. The ancients and the Irish peasantry had quite distinctly in mind either song or speech—never a third mode which lay between the two and was used for the rendering of poetry. If the traditional ballad tunes

are of the simplest kind, it is not to favor a theory of Mr. Yeats's, but merely because the composers of these tunes knew no more elaborate music. It cannot be too strongly urged that the real successors of the singing poets are Schubert and Mozart and Wagner—the great song-writers and opera-composers. Whenever poetry needs the enhancement of music, the composers will claim it for their own. The example of Richard Strauss's elaborate recitative compositions will hardly encourage them to revive among us "the traditional Irish singing."

Like many other well-intentioned movements, this revival of "speaking to music" is merely an amusing bit of archaism, which cavalierly disregards the reasons for things as they are. When poetry filled a large social function, was recited before audiences, and was practically never read, it naturally required the aid of music. Now that poetry has become an individual enjoyment—a matter chiefly for the closet—it has largely dispensed with melody. Meanwhile long generations of refined social intercourse have probably greatly improved the speaking voice; and in our own time, in the case of Booth at least, and in Bernhardt before her mannerisms overtook her, we have heard a declamation so varied, so subtle and harmonious, that beside it any form of intonation—anything, in fact, but the most perfect melody—must have seemed crude and inartistic. We are no longer a singing people, and the fact is to be deplored; but our regeneration lies along the lines of perfected music and of intelligent declamation, not along those of an archaistic return to outworn musical modes. Cantilation, at least, will not win us back from prose to poetry.

BRET HARTE.

An interesting and unusual circumstance to be noted in reviewing the literary career of the late Bret Harte is the survival of his fame in spite of his indifference about writing up to it; indeed, in the face of what sometimes seemed a reckless impulse to write it down. His work easily divides itself into two periods—a short one, during which he wrote a score or so of tales whose freshness, force, and vivacity have never been excelled; and a long, prolific one, during which he does not appear to have received a new impression, or to have made a new observation on life, or to have profited for reflection by the varied experience of the passing years that should bring wisdom.

The quality of his creative faculty was similar to that of a highly concentrated essence, good to produce marvellous effects in a short time, but losing its efficacy through constant use. We may plausibly infer from the subjects and title of his last volume, 'Openings in the Old Trail' (Houghton, Mifflin & Co.), his own recognition that, in all his life, he had had a clear vision of but one trail—the steep trail leading from the world beyond down the Sierras to the river turbid with golden sands. As discoverer of the trail, no one may dispute his claim. He struck it, blazed it, exploited it; it was and must ever remain absolutely, brilliantly, his own.

His actual discovery was Nature in an aspect always grand, sometimes awful, at a moment when her primeval solitude was invaded by a host that had cast human relationships behind, and came surging towards an unknown land, all under the sway of a devouring passion—the thirst for gold. Following the line of literary tradition, such an inspiration should have provoked rather splendid romance. So far, however, as any manifestation of the human mind is original, Bret Harte's use of his situation was original; and it is by this originality, which defied precedent and dared failure, that he won an immediate success and permanent high rank in American literature. He used the most romantic stuff literally—that is, as a realist. He presented the fact, humorously, ironically, pathetically, cynically, and always for its own sake, apparently without any desire to idealize, or any perception of symbolical value. This is not to say that his work was a plain statement of facts, but that almost nothing beyond or beneath the external fact came within the range of his impressionability. He was not a contemplative man; he had no curiosity about things invisible to the natural eye; he was not interested in pointing a way to higher things. He accepted the world as he saw it, and sought to reveal it in the most effective manner, unconcerned to censure or to praise. He was not, in fact, a great man, and therefore could not be a great writer. To be original in literature, consciously to owe little to predecessors, is to be remarkable, to be memorable, to make for one's self a place conspicuous and apart; but it is not to be great. Greatness in letters implies possession not so much of qualities that are different from the common, and dazzling, as of those which humanity has long agreed to regard as the most enviable.

Bret Harte was, for his time, different and is still dazzling. In the early seventies the American public had a taste in fiction of confirmed respectability. Vice was tolerated only to defeat itself and by way of enhancing the virtue of being virtuous. When half a dozen tales concerning a community of ruffians (thieves, gamblers, and prostitutes) dwelling beyond the Rockies were introduced to the reading East, literary conventions were demoralized, and the claims of virtue to exclusive representation in fiction were, so to speak, knocked into a cocked hat. The author, in his own person, shared the indifference as to morals that distinguished his characters. Like his Colonel Starbottle of Siskiyou, he seemed to assume personal responsibility. At all events he made no attempt to evade it by interpolated sermons or by a plea that he described the immoral for the purpose of being moral. "Cherokee Sal's" baby (father unknown) is born in Roaring Camp. Outside the door, groups of men, of imperturbable demeanor, apparently passionless, grimly ironical, make bets, two to five, that Sal will pull through. But when the door was opened by "Stumpy," Sal "had climbed, as it were, that rugged road that led to the stars, and so passed out of Roaring Camp, its sin and shame, for ever." The narrator of the incident makes no effort to improve the occasion. The chances were all against Sal; so, in a perfectly natural way, she died. That is the tale; take it or leave it as you please. Thus peremptorily he appears as a rejector of the didactic motive, and his rejection goes to show his instinct for story-telling, and allies him with such ancient masters of his craft as Boccaccio and the narrator of the adventures of Aladdin.

Though the matter of his tales was revolutionary, the form was classical. He aimed at an effect of the whole, and this he achieved by the most careful selection of detail, and probably by equally scrupulous rejection. He was not insensible to physical nature, but he used it only as a background for drama or for purely rhetorical intensification. "Tennessee" makes a desperate dash for liberty, shoots right and left at the crowd surrpunding the Arcade Saloon, speeds thence up Grizzly Cañon, is captured, tried, and condemned to die; and "above all this, etched on the dark firmament, rose the Sierras, remote and passionless, crowned with remoter, passionless stars." Similar imaginative sentences appear mechanically, for scenic effect, and can hardly be taken to mean that the author wishes to intimate a profound appreciation of the real insignificance of human tragedy. Still, in 'The Outcasts of Poker Flat,' such an intention is discernible, and it lends to the incident the dignity of a nobler literature.

There is every reason to believe that Bret Harte arrived instinctively at perfection of form, and that he did not proceed deliberately, in conformity with known æsthetic law. This instinct was not enough for the construction of novels or for the prolonged development of character. No more incoherent novel than 'Gabriel Conroy' was ever written. There are excellent scenes, sharply defined individuals, but, on the whole, the novel is a monument to the author's limitations and defects. The women express supremely his low and vulgar view of women and his appalling unconsciousness that the view was either low or vulgar. He emphasizes throughout his remoteness from true romance, his confusion between pathos and sentimentality, and his delight in glaring theatrical effects. He suggests, indeed, quite pitiably, that there was nothing in himself to serve as a touchstone for the representation of honorable men and decent women.

Nothing in his work has been more severely criticised than the habit of attributing to passably worthless people a single and signal virtue; but the virtue is generally a primitive one, and is rarely either inconsistent or improbable. After all, the denizens of Roaring Camp and Red Dog and One Horse Gulch (incomparable names!) were men, not brutes; and it is not ranging them with the angels to say that they stood by each other in calamity, or that one could give his life for a friend, or for a child, or even for a woman whose improprieties were flagrant. In nothing, it seems to us, was Bret Harte more successful than in saving his heroes from the heroic pose. The keynote of his characterization is concealment of emotion. Certain gamblers, it will be remembered, calmly continued their game "the day that French Pete and Kanaka Joe

shot each other to death over the bar in the front room." "Mr. John Oakhurst, going out in the snow to shoot himself, smilingly kissed the Duchess," and said he was only going as far as the Cañon. Men with a hand on their pistols, watching to get the "line," chaffed each other in miners' or gamblers' slang.

It is the privilege of creative writers whose work is based on actual social conditions, to become for posterity the historians of those conditions. No future historian of the State of California, however serious, can hope to discredit Bret Harte. Already Jack Hamlin, that lonely calculator of chances, Miggles, Colonel Starbottle, Yuba Bill, and M'liss, daughter of Old Smith, Old Bummer Smith, are historical personages. In time their story will probably crystallize into a legend—the "Legend of the Forty-Niners"—possessing authority and prestige, for ever true, as is its remote classical progenitor, the Legend of the Golden Fleece.

MR. BRYCE'S ROMANES LECTURE.

OXFORD, June 7, 1902.

The Sheldonian Theatre was crowded by Mr. Bryce's hearers beyond its recent wont at Romanes lectures. On the present occasion the number of American professors and college presidents, and of Americans in general, was noticeably large. Indeed, the resort of the learned and academical world of America to Oxford has been markedly on the increase of late years, so that if it is not already true, it will soon be true, to say that Oxford is an indispensable centre of the broadest intellectual life of English-speaking people the world over. No man could more fitly illustrate this state of things than Mr. James Bryce, who has done so much to promote a mutual understanding between America and England. Nor could he well have chosen a topic of more intimate and equal concern to the United States and the British Empire than "The Relations of the Advanced and the Backward Races of Mankind."

His lecture was too earnest and too thoughtful to admit of purple passages; and his tense manner, combined with the encyclopædic readiness with which he flashed the rays of his scrutiny now into the fastnesses of hill tribes in India, anon into the mining camps of the Rocky Mountains, passing from the Bushmen of South Africa to the Ainos of Japan and the tribes of the Malay archipelago, seemed to forbid demonstrations of applause. But he held the unflagging attention of his large audience to the last, and gave to his brief characterizations of the multitudinous home-countries of the several tribes and races of mankind that vivid reality which emanates from the mind only of one who speaks of what he has seen with his own eyes. In his introduction he dwelt on the fact that man has at last "all but finished" the exploration of the earth; that "a far more widespread contact" than other ages have seen has resulted from this, and that all the backward races are now placed "in a more or less complete dependence upon the more advanced." His subject he finally defined as "the phenomena that attend the contact of the civilized and uncivilized races." Racial difference he made no attempt to define. "Let us go straight to the facts," he said, "the facts and problems which the contact of diverse races brings into being."

His first case was that of comparatively small aggregates of men in a backward state, or of more numerous tribes whose physique was weak. In this case the backward race quickly vanishes, not always through the fault of the stronger race. His second case was one not of destruction but of absorption. When a stronger immigrant race comes among aborigines of a race neither in a low stage of savagery nor physically feeble, these may be imperceptibly "blent with and lost among the stronger and more numerous or more prolific race." Sometimes this is "not so much by mixture of blood as by the imposition on the less civilized race of the characteristic type of the more advanced." The Slavs who entered Europe in and after the eighth century have become Greeks, and the same is true, he said, of the Albanians in Greece. The race thus absorbed may be the stronger in everything but intelligence. Strength is sometimes the undoing of a people, as the case of the red Indian so often shows. "The black man," said our lecturer most pointedly—"the black man submits and survives." Here he paused to survey the enormous change that has passed upon the population of the globe through the two cases of extinction and absorption.

By far the most complex phenomena of race-contact arose, continued Mr. Bryce, where there can be no question of absorption or of extinction; the races involved being equally matched, or nearly so. Here either there is mixture by intermarriage, or the two races "remain separate, necessarily influencing one another but not mingling their blood." In the former case, that of mixture of blood by intermarriage, he found "all the great peoples of the world": the French, the Germans, the Russians. And finally, as the result of the completest mixture on equal terms and in the most various ways, he instanced the English and the Americans in the following words:

"The original source of the largest of all civilized nations, that which inhabits the temperate parts of North America, was not only itself the product of diverse sources before it crossed the ocean, but has within the last seventy years received such enormous accretions from Ireland, Germany, Scandinavia, and the Slavs of Central Europe, that it is becoming the most mixed of all the peoples we know."

Having dealt with the extinction of the weak by contact with the stronger races, and with the less drastic but equally complete process of absorption which so frequently takes place, and having surveyed the capital instances of the formation of new races by commixture on more or less equal terms of various strong races, our lecturer addressed himself to the last case of all—cases of contact without mixture of blood or intermarriage. "What," he asked, "are the causes which favor or check intermarriage between races brought into contact?" The causes favoring it he found neither in equal civilization nor in equal endowments, physical or mental, nor in community of race or language. The cause absolutely checking it he found in physical repulsion based upon differences in color, and varying in its intensity according to the degree of those differences. Repulsion to intermarriage was most absolute between the white races and the blacks. It existed, but in a less degree, between the white races and the red men. Here a personal observation drove the point home. "I have been struck," said Mr. Bryce, "by hearing men in the Rocky Mountains who would have concealed any infusion of negro blood, mention that their mothers or grandmothers had been Indians."

A difference between the Teutonic and the South European races was here noted, the latter feeling far less repulsion to intermarriage with a colored race. "Where Americans, Englishmen, and Germans rule," he said, "there is no intermarriage with the colored races, and consequently no prospect of race-fusion." Between colored races contact brings about more intermarriage on the whole, but red men hardly intermarry with negroes more frequently than do whites. The Berbers of North Africa, on the contrary, are prone to unite with the blacks of the Sudan. Similar and more extreme is the case of Morocco. The reason for this our lecturer found chiefly in religion. Potent though religion may be, he conceived it to be less powerful than color either in favor of or against intermarriage, because it cannot create physical repulsion and it can be changed. Religion in the pre-Christian world scarcely exercised a potent influence because everybody respected his neighbor's religion. Now, our more metaphysical monotheism pronounces other faiths pernicious, and will have no dealings with their professors. A distinction in this regard was here made between Islam and Christianity. Mohammedans intermarry more freely with polytheists because in such cases the wife abjures her "false" religion. But with Christians the followers of Islam will not easily intermarry. "It is religion," our lecturer said, "that has in those regions forbidden the mixture of races, and created that apparently insoluble problem which we call 'the Eastern question.'"

Next came up for consideration those cases where, in spite of the barrier of color or that of religion, or both, there is actual mixture between the white and the colored races. A third race results; does it stand midway between the two sources from which it derives? Physically it usually does, but its mental type is much nearer to that of the advanced race. But here Mr. Bryce urged that our data are insufficient. Still more insufficient, he maintained, were our data for determining the result of race-mixture such as that in progress through the contact in America of numerous white races. "We cannot," said Mr. Bryce, "speak positively as to what the result may be on the American people, after another century, of the great stream of non-English blood which is being poured into its veins. The type may remain, yet the national character may prove to have been affected." He ventured, nevertheless, upon a general prognostication as follows: (1) Two races physiologically near would combine with advantageous results. (2) In proportion as the two elements were physiologically remote, the resulting combination failed to improve on the lower of the two stocks. He instanced, as a typical instance of (1), "the peoples formed by the blending of Celts and Teutons in western Britain (Wessex), in northeastern Ireland, in northeastern France, and in western Switzerland, and the admixture of Slavs and Teutons in northern and eastern Germany. On the other hand, mixtures of

whites and negroes, or of whites and Hindus, being cases of (2), though apparently not lacking in physical strength, show a lack of persistency, and either die out or revert by intermarriage to the type of one of the parent races, usually to that of the lower race.

Here Mr. Bryce's argument dwelt significantly upon three men of brilliant gifts constituting exceptions to this dictum (and he might have added a fourth, Pushkin, the national poet of Russia): Alexandre Dumas, whose imagination, though "not of the highest quality," was of almost unsurpassed fertility, although he was either a mulatto or a quadroon. Then, in words so unmistakably pointing to an honored American citizen that, even before an English audience it was not necessary to give his name, the lecturer said: "At this moment there is living in the United States the son of a white father and negro mother, himself born in slavery, who is one of the most remarkable personalities and perhaps the most moving and persuasive orator in that nation of eighty millions." Finally, he added: "Mexico has been ruled for a quarter of a century with equal vigor and wisdom by a man of mixed Indian and Spanish blood who ranks among the five or six leading figures of our time." These single instances, however, leave unchallenged the average result of contact by way of mixture between races of marked physical dissimilarity. "The average offspring is apt," said Mr. Bryce, "to be physically inferior to the average of either parent stock," and, in its mental endowment, falls short of the higher by a greater interval than that by which it rises above the lower. So wide a generalization doubtless required qualification, he went on to say. The Arabs had improved certain African strains by permeating them, and the like thing had happened in Mexico; but whether the net result was satisfactory remained problematical. In closing this discussion of contact by mixture between races physiologically opposed, but of fairly equal strength, Mr. Bryce dwelt upon the unquestioned finality of this solution of the race problem. Race antagonism, dangerous "because rooted in nature," could not but vanish, he said, "when the races were blent."

The remaining third of the lecture was devoted to the discussion of cases where, for various reasons carefully differentiated, contact exists without the possibility of fusion by marriage—the English in India, the Americans in Luzon and the Philippines generally, the Dutch in Java, the French in Madagascar, the Chinese in Western America and Australia, and, lastly, the circumstances being only analogous to the cases above instanced, the former slave States of our Union, where seven millions of negroes dwell together with double their number of whites. Add Algeria and British South Africa and Western South America, where the preponderance numerically of the backward races is very great, though not always statistically ascertainable. Under all these widely differing circumstances and in every one of these various cases race antagonism, arising from inequality and rooted in dissimilarity of character, issuing in distrust and helpless misunderstanding, was the danger, made pressing by the fact of two races confronting each other as distinct and unfriendly bodies. "The passions of a racial conflict," said Mr. Bryce, "sweep all but the gentlest natures away." Industrial difficulties arose to complicate tumultuous violence, and pity grew blunt towards those who stood outside the racial or social pale. Evils of this order tended to become more acute the more democratic a government became, and the more advantages of education and the like were extended to the weaker race.

Addressing himself to the formidable problems thus baldly summarized from his more eloquent and complete account, the lecturer began by saying: "That contact can be averted by inducing European peoples to forbear from annexing or settling in the countries inhabited by the colored races, is not to be expected. The impulses which move these peoples in the present will not be checked by the prospect of evils in the future. Besides, the work of annexation is practically done already." Withdrawal from Algeria, India, or Western Turkestan would, he argued, give rise to mischiefs probably greater than those in the present situation. The French, the English, the Russians, then, he regards as sadly committed to their well-nigh impossible tasks in those countries. To the Californian and Australian policies of absolutely stringent exclusiveness toward the Chinese, he gave his hesitating and regretful assent, saying guardedly: "There are cases in which the exclusion of the backward race seems justified in the interest of humanity at large by the consideration that to admit that race would involve more of loss to the higher race than of gain to the lower."

Mr. Bryce's mind, then, on one of our American questions of the hour, was made tolerably clear. Did his silence on another—our occupation of the Philippines—convey the opinion that it would be best for us to withdraw before it is too late, as it is for the French, the English, and the Russians in Algeria, India, and Turkestan? The only answer derivable from his discourse comes most uncertainly from the considerations with which it closed—from an enumeration which he gave of certain elements of hope in the future outlook. We must, then, pass over, with however much regret, his masterly discussion of our negro problem in the South, and leave out his luminous appreciations of the rôles played in race-contact where fusion is impossible by Christianity and Islam, respectively, in order to derive such light as may come from his mature consideration of problems like ours in the Philippines.

Baldly presented, and not, be it remembered, definitely addressed to our case, though it is named, his considerations are these: (1) Duty and policy alike demand that the relations should be friendly between a dominant race and a backward race with which it cannot fuse and yet must live; (2) at the risk of excluding and therefore alienating the poorest and most ignorant whites, race and blood should not be made the ground of discrimination in respect of political rights, which should be based on a qualification of property and education; (3) as to social relations, the only hope springs from a possibility that the dominant race can realize how important it is for their country's future to help on and make friends with the backward race. "Let who will make the laws if I make the manners," was the lecturer's hopeful text, and he added: "Manners depend upon sentiment, and sentiment changes slowly. Still, it changes. It has changed as regards torture. It has changed as regards slavery."

Finally, and again in a mood of hesitant optimism, Mr. Bryce spoke of certain possible changes which might conceivably affect the existing contact of races, especially in the tropics, and so make the future unlike the past: (1) The power of white races to work and multiply in the tropics may be enhanced by medical discoveries such as "the recent expulsion of yellow fever from Cuba by the American physicians"; (2) the rate of increase or decrease of dominant races may be affected by their gradual acclimatization in countries recently occupied; (3) scientific discovery and mechanical invention may largely supersede the necessity for labor in countries too hot for white men to work in; (4) some of the races now deemed backward may show an unforeseen capacity for intellectual and moral progress. The force of this point the lecturer greatly enhanced by his notable observation that the differences between backward and advanced races lie "not so much in intelligence as in force of will and tenacity of purpose," and he added: "How far these latter qualities can be developed with a developing intellect is still doubtful, for the future will bring new opportunities."

LOUIS DYER.

SOME FROUDE LETTERS.

PARIS, May 1, 1902.

There died in France, a year or more ago, one of those political agitators, once common in this country, who, under changed conditions, have now become very rare. I refer to the late Gen. Gustave Cluseret, who began life in most orthodox fashion as a regularly educated officer of the French army, but who ended his days as a workingman's member of the Chamber of Deputies. During his long career, Cluseret had been a soldier in the armies of Italy and the United States, an exile in America, Belgium, Switzerland, and Turkey, a war correspondent for a New York daily, a painter who exhibited at many a Paris Salon, a Fenian leader in England, and a War Minister under the Paris Commune, when he was condemned to death *in contumaciam* by the Versailles Government. Such were some of the varied experiences of this extraordinary man.

Cluseret's strange life, his rather striking personal appearance, his bold and often picturesque language, in which his many personal enemies (almost everybody became such sooner or later) were always handled without gloves, a winning something in his manners—all this awakened a sort of compassion for an evidently disappointed spirit and won him more than one distinguished friend in various lands. In Italy he was closely associated with Garibaldi in the heroic period, and during the epoch of our civil war Sumner, among other prominent Americans, was, as letters which I have under my eye as I write show, warmly attached to him.

But of all Cluseret's foreign aequaintances, James Anthony Froude probably had for him the greatest good will. Of Froude Cluseret never seemed to have an evil word to say, a very rare state of mind for him.

They appear to have become acquainted immediately after the fall of the Commune, from which disaster Cluseret barely escaped with his life, thanks largely to his American citizenship. The nature of this acquaintance comes out well in Froude's letters to Cluseret, which the latter placed in my possession some years ago, and a portion of which are reproduced below.

Froude's interest in Cluseret lessened towards the close of his life. The reason for this appears in the letter which Froude wrote to me in September, 1888:

"Cluseret's book of Memoirs perplexes me. I cannot undertake to find a translator for it. The present state of society may be as rotten as he thinks it is, and may be all going to the Devil. But if the Devil is to come for it in the shape of dynamite and the massacre of the bourgeoisie, which he seems to recommend, I hope I shall be in another place before the visitation takes effect."

On June 29, 1894, he wrote to me as follows. The letter reached me on the day President Carnot was buried:

"I am interested in what you tell me about Cluseret. He used to write to me sometimes. I should like to hear what he thinks about the present phase of the Revolution. My own opinion has long been that we are drifting towards military government again; I mean all of us, France, England, and America too. Constitutional Governments are too weak to deal with daggers and dynamite. Your own people lynch the niggers for fear the courts should be too gentle with them. Carlyle said to me in 1871: 'The people are saying to the upper classes, if you cannot mend this accursed state of society, by God, we will destroy it and you, and ourselves too, and so make an end.' Society does not mean to be destroyed just yet, and, if free institutions are in the way, will end them first."

THEODORE STANTON.

---

5 ONSLOW GARDENS, LONDON, S. W.,
February 10, 1872.

For yourself, I congratulate you on being alive. The interest which I felt in you led me to make particular inquiries as to your fate, and I supposed myself to have received authentic information that you had been killed.

I am an old Republican. Thirty years ago I would myself have taken my place on the barricade had the chance fallen in my way. I was a fool, like other young men, and believed that because existing institutions were wrong, they would fall when they were attacked, and that something better would at once take their place. My present opinion is, that although the something better will come at last, we may wait for it a couple of hundred years, and that the International (so far as I know either its views or its resources) would not give us, if it succeeded, a permanent state of society better than what we now possess.

The men of ideas, however, are the only members of the human family that are interesting. You, as one of them, I shall continue to watch so long as you are above the water. Whatever befalls you, your course will be a remarkable one, and you will contribute your share to the smashing up of injustice and imposture.

Yours truly, J. A. FROUDE
(The Editor of *Fraser's*).

LONDON, May 16, 1872.

I think of going to New York in the Autumn to give lectures on the Irish question. I mean to say that the political side of Irish agitation is folly, and can end only (as it has always hitherto ended) in shame and national disgrace. If it succeeded, it would make the peasantry no better off than they are at present. There is no tyrant over the poor so cruel as an Irish attorney or an Irish land-jobber, and those are the men who would be elected to an Irish Parliament. I wish to see the whole force of Irish popular opinion united to that of the English people to overthrow landlordism, and give the fruits of the soil to those who cultivate it. The Fenians, when they hear what I have to say about their false and bastard "patriotism," will be inclined to break my head or put a bullet through me. I wish them, however, to hear me out to the end of my course of lectures at any rate. A word from you to that effect, if you have any friends among them at New York, might be useful to me.

The *Fortnightly Review*, about which you ask, is an advanced Radical Publication. Many good men write in it. But it is too doctrinaire for my taste. The formulas of advanced English politicians are as stiff and arrogant as the formulas of theology. Truth itself becomes distasteful to me when it comes in the shape of a proposition. Half the life is struck out of it in the process. The *Review*, however, has a high reputation. The chief contributors are Comtists (you know about M. Comte), and in their own way stand up for the poor against the rich.

LONDON, June 11, 1872.

A time will come when you will see that the leaders of our Reform League are as hollow and futile as the Fenians. Political Reform, both in England and Ireland, is an imposture. The wider the suffrage in England, the more completely Parliament becomes a monopoly of the rich, and in consequence the more corrupt and useless. In Ireland, a Home Parliament will be equally returned by the Priests, and the power of Priests and the power of money are the two devils that we have to fight against.

The true leaders of the people in England are the managers of the Trades Unions, who care nothing for politics or Parliament, but fix their eyes steadily on the particular measures which will do them good, and wrench them by superior skill and force out of the hands of the capitalists. The upper classes are wise in their generation, and like nothing better than to tempt the masses away after political will-o'-the-wisps. So long as the hounds are on that scent, they know well that they have nothing to fear.

LONDON, September 11, 1872.

You ask about Mr. Bradlaugh. I have never seen him, but I have heard much about him. He is one of those able, eloquent men who have large influence over the masses of thinking workingmen, but are particularly obnoxious to the upper classes of society, and therefore never succeed in making themselves a political force in the State. They start the ideas which in the end prevail. They agitate; they create the materials of a considerable movement. But as soon as the movement has attained dimensions enough to be important, the leadership is taken out of their hands by one or other of the established parties in Parliament, and they are themselves thrust aside.

Bradlaugh is reported to believe in the possibility of a violent Revolution in England which he can himself lead and control. I consider this to be the wildest illusion. The reverence for rich men is so great in England that universal suffrage and the Ballot will only fill the House of Commons with millionaires. If trade failed and we had two or three millions out of employ with food at famine prices, we might have local disturbances, riots, and perhaps very great political changes; but not even then such alteration as would bring Bradlaugh to the front.

LONDON, October 19, 1873.

I have communicated your wishes to the Minister of War, and I sincerely hope that he may accept your services. The Cabinet ought to feel that they owe you something for your Paper on the Fenians, and I know them to be generally well disposed, though so weak that we can expect nothing from them which they fear might rouse opposition. This cowardice is the curse of Constitutional Governments. We can only hope that they save us from what would be worse under other forms.

The accounts from France to-day show that the reactionaries are bolder than you suppose. The Catholic priests, with the Pope at their head, are delirious with vanity. They have three-quarters of the French women at their backs. They have persuaded themselves that the Virgin Mary has taken to politics, and in this state of mind may dare anything. If, as is possible, they succeed in once more kindling a conflagration in Europe, it will be the beginning of the end. The whole system will be torn up by the roots. For this consummation I devoutly pray.

LONDON, May 14, 1874.

I have read your letter with great interest. I sympathise with you and will do everything in my power to help you. I know well how bitter it is for a man of ability and accomplishments, conscious of talent and of a desire to use his life nobly, to be cast aside in compelled inactivity. I am assured that you are sincere in your wish to be of use in your generation, as I am assured also that you have been sincere throughout your career.

But as to your present proposal.

The Conservative Cabinet now in office is composed of two sections. The Prime Minister and the Earl of Derby are men of large liberal sentiments. They are conscious that the world is moving and that they must move along with it. Others among the ministers, men of great ability also, are more under the influence of the Past, and are more keenly hostile to the spirit of Democracy and revolt against established Institutions. Among these the Marquis of Salisbury is the most prominent, and before him, as Minister for India, your application would have to be laid if you present it in its present form. I need hardly tell you that the answer would be unfavourable. Your offer to serve in Africa, while generously made, was rejected by the late Liberal Ministry, with immediate emphasis. The objections felt by Mr. Cardwell and by Lord Kimberley would present themselves more strongly to the Marquis of Salisbury.

The political situation of England can scarcely be intelligible to any one who is not himself an Englishman. Forty years ago we started with enthusiasm on the career of Reform to make a new heaven and a new earth. We expected that Political Reform would bring genius and intellect to the front and introduce a spirit of Justice into the administration of the Empire. The result has been that an aristocracy of wealth has superseded the aristocracy of birth. The higher interests of the country have been sacrificed to the men of capital, the manufacturers, the traders, the shopkeepers. Instead of a science of politics, we have Political Economy which leaves every one to take care of himself and the devil of us all. Selfishness has taken the place of patriotism. We have less ability in Parliament instead of more. The energy of the country has drifted into an insane craving after money.

Consequently, a general sense has come over us that Democracy, instead of mending matters, will, if we carry it further, make them worse than they are, and we have made a Conservative Revolution. In despair of getting any real good from the Radicals, we have brought back into power the representatives of the Institutions under which we grew to be a great country, with Mr. D'Israeli at their head, who, although himself a man of the people, has always foreseen the true tendencies of things and whom we now understand to have been right.

Whether these men will do any better than the others, time will show. For the present, the game of radicalism has been played out over Europe; each shock of revolution has been weaker since 1792. Castelar's failure in Spain is the last effort which will be made in that direction for a long period. Such, at least, is my opinion. The prevailing passion among mankind is now love of money, and while that continues, the greater the power of the people the greater will be the corruption. Witness America. I was myself a Republican through the best years of my life. I have been most unwillingly awakened from my dream.

Now as to yourself. It will be useless for me to write to Lord Salisbury. If you determine

on making an immediate application to the Minister, I should advise you to address yourself frankly without mentioning me or any one (you are yourself sufficiently well known) to Mr. D'Israeli. You can tell him that you have made all the reparation in your power for the Irish affair by publishing your account of it; you can say to him what you say to me, and leave yourself to his candour and consideration. You will be more likely to succeed in this way than by any indirect appeal. There is, however, I think, a better way, if you are in a condition to avail yourself of it. Men in power are always ready to recognize service when actually done or begun. They have then something more than words to go upon. Why should you not go yourself to Herat or Cashgar? The Native Princes will eagerly welcome you and accept your assistance; and if you prove yourself useful in organizing their troops, the Anglo-Indian politicians will soon hear of it.

I give you the best advice in my power. I do not think Mr. D'Israeli will at once listen to your advances, for this plain reason: he is too large-minded a man to feel ill will towards you, but the Radical party are on the watch for any mistake which he may make. They would not scruple in the least to declaim against his employment of General Cluseret on every platform and in every newspaper in the Kingdom, as a proof that the sober English nation ought not to trust him. You cannot expect him to encounter such a storm on your behalf till you have done something to make yourself valued.

LONDON, March 1, 1876.

I have absolutely no knowledge of military matters. I shall, however, read your essay with very great interest, and, if I see opportunity, I will submit it to the inspection of my friend Sir Garnet Wolséley, whose name you have doubtless heard of.

I was not unmindful of you when I saw the President of the S. A. Republic. He saw readily the great advantage which he might derive from your presence and assistance. His fear, indeed, was that your influence might become too great, and that you might become a dangerous rival to himself. Yet he bears you in mind, and I shall not be surprised if you hear from him. He has now returned to the Cape to resume his duties, and will make us acquainted before long with his future plans and purposes. It will amuse you to hear that one of his immediate intentions is to carry a vote through his Volksraad to close the remarkable Gold Fields which have been discovered within his boundaries. He and his people disapprove of the influx of vagabonds from all parts of the world, who trouble the peace of the old-fashioned Dutch farmers. Do not publish this information. I mention it merely to show you what strange things may be attempted in that part of the world, and the kind of man that you may have to deal with in case he applies for you.

LONDON, August 11, 1876.

I am sorry that the negotiation with the Transvaal Republic has led to nothing; yet perhaps you are as well out of the affair as in it. The President, who seemed inclined to work with England when he was here, is now pursuing a policy of his own from which I do not anticipate any good results. He has provoked a war with the natives which all the English settlers in the country disapprove. I feel uncertain whether without their help he will succeed in what he has undertaken; and if he is defeated and there is a general rising of the native independent chiefs against him, we may be obliged to interfere. I wish the President well, and for that reason I should have been glad could he have had such efficient help as yours at his side; but he is rash, confident, and enthusiastic, and I have lived long enough to distrust enthusiasm except in those rare cases where there is sufficient dry fuel to kindle an irresistible fire.

You are no doubt impatient of inactivity; but for your own sake I shall be sorry also to hear of your joining the Turks. Turkey is a falling cause. England will not again support the Crescent against the Russians unless Germany is at our side. Hereafter, perhaps, when the Turkish Empire dissolves, there may be a quarrel over the spoils; but the time is not come. Russia will not begin, and will not again run the risk of a war against a European coalition. But you must judge for yourself.

LONDON, March 2, 1877.

I cannot yet speak with certainty, but I believe that the time is passed when you could have been of use in the Transvaal. Had the President accepted your services when I recommended him to employ you, the Republic would now have been triumphant and secure of independence. His bad success has alienated his people, the majority of whom desire to throw themselves on British protection, of course under the British flag. The Zulu King Cetewayo now threatens them with war, and is only prevented from invading them by fear of the British Government. Disordered and divided as the Boers are, Cetewayo, who could send 50,000 well-armed men against them, could burn and plunder the whole country. Though I think that it will be better for the South African States to be united under some common authority, I am always sorry to see a Free State lose its autonomy, and if the President had accepted your help, the Republic would have been able to enter the Union on more favourable terms. But it is now too late. I would not wish to see you go there, for you would have no field open to you in which to distinguish yourself. How often have those fatal words "Too late" interfered with the best intended enterprises!

LONDON, March 11, 1878.

If you really care about this South African affair, I will write what you say to the President and I daresay something may be arranged. But I gather from your letter that you are indifferent about it, nor, if you think of returning so soon to Europe, would it be worth your while to undertake a work in itself of so trivial a character. The money which the S. A. Republic would offer would be very slight; the only adequate reward which so poor a state could offer would be lands and permanent office in the Republic. The Dutch farmers are poor themselves. They spend little in their own families, and do not understand that any one can need more. It is possible that if the President carries out his threat of closing the gold fields, there may be fighting there. There are several hundred English, American, and Australian diggers at work there, making large profits, and they will not go out without a struggle. In that case the President will himself be anxious for your assistance. Let him ask for it himself and you can make your own terms.

But I trust that the turn of affairs in France will soon open a way for your return to employment and distinction in your own country, and you will cease to seek for these remote and secondary methods of occupying your talents.

You are good enough to wish to see what I have written about South Africa. It is merely a long report, submitted officially to Parliament. It is published in a collection of papers on the South African Conference laid on the table of the House by the Colonial Secretary, and is scarcely worth your looking at. I was obliged to appeal to the people of the Colony against the Colonial politicians and ministers, and I made them very angry with me. I am supposed here to have been out of order, but to have been essentially right, and my eccentricities will probably be forgiven.

LONDON, January 24, 1877.*

The plot thickens. What next? The Conservatives are Turk in this country; the Liberals are Russian. The confusion of parties and principles beats anything that I can recollect. The cloud will break in a thunder-storm before long. My own eyes are fixed on Bismarck, who alone, I suppose, in Europe, clearly knows his own mind. Many English officers will take service with the Turk, but my own convictions remain unchanged, that the Turk is a lost cause. Bismarck privately advises us to seize Egypt, which we shall not do. As a Nation we shall do nothing; and, by attempting to stand still on slippery ice, we shall make a helpless exhibition of ourselves. Is France effaced that she has no word to speak at such a time?

*The date is between the close of the Servian-Turkish war and the outbreak of the more formidable Russian-Turkish conflict, which quickly followed.

Correspondence.

RUSHING AN ENCYCLOPÆDIA.

TO THE EDITOR OF THE NATION:

SIR: It is much to be regretted that the long-standing rivalry between the great publishing houses of F. A. Brockhaus and the Bibliographisches Institut, in the matter of up-to-dateness of their respective Konversations-Lexikons (Brockhaus and Meyer) has at last led to the adoption of methods in the new edition of the former, now in the course of publication, which it is courteous to call annoying and questionable. In the haste of rushing this "Jubiläums-Ausgabe" through the press—at the rate of seven volumes a year—a large number of contemporaneous celebrities (the very ones concerning whom information is most sought by those who consult a cyclopædia) are simply mentioned by name, with a reference to Volume 17. Thus, merely because it was not deemed expedient to wait until the biographies could be written, the volumes are sent out into the world incomplete in a very important feature, and the disappointed reader must wait for his information until the appearance of the supplemental volume. Among the biographies thus withheld may be mentioned, at random, those of the physicist Boltzmann, the author Hermann Bahr, the philosopher Benno Erdmann, the archæologist Babelon, the astronomer Backlund, the painter Gallegos, etc. The list might be made a long one.

This defect is made all the more inexcusable by the fact that, in the geographical articles, may be found descriptions of cities repeating word for word what was said in preceding editions about certain features that have since undergone considerable change. As in biography, so in geography many articles are reserved for treatment in Volume 17, as, for instance, in the case of Formazzathal, Akita (Japan), and Arnold (England); and subjects of varied interest, such as Faustball, Fliegendes Geschwader, Eros (Asteroid), Fahrradversicherung, Färbemethoden, etc., are tantalizingly mentioned, only to be referred to the future receptacle of all of them—Volume 17.

GUSTAV POLLAK.

NEW YORK, June 16, 1902.

MAGNETIC WAVES.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for June 19, at page 485, it is stated that magnetic disturbance attended the eruption of Mont Pelée on May 8, and that "this is the first observation of the kind." On the contrary, one of the best time observations of the Charleston earthquake was recorded by the magnetic instruments at Toronto Observatory, the movement being distinctly magnetic, and not due to mechanical jarring. Being interested in magnetic work, and at the sug-

gestion of the Director of the Observatory, I examined the curve personally, and found it to be a distinct pull to one side, and not oscillatory.—Yours very truly,

M. A. VEEDER.

LYONS, N. Y., June 20, 1902.

[We were summarizing a statement in the *National Geographic Magazine;* but the reference was to a volcanic, not earthquake, cause.—ED. NATION.]

AUROCHS AND URUS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Roosevelt is probably quite right in his statement regarding the misuse of aurochs. The name aurochs, *auer ochs*, ox of old, properly belongs to *Bos urus* of northwestern Europe. The name urus was *not* the native name, but the name given to the animal by the Romans. The name in modern times has become transferred to the European bison, *Bison bonassus*, which is a totally distinct animal from the urus.

The case is analogous to the transferral of the name penguin, originally applied to the great auk, to the flightless birds of the Southern Hemisphere. L.

WASHINGTON, D. C., June 22, 1902.

Notes.

G. P. Putnam's Sons have in hand the first uniform edition of Walt Whitman's Works, to be published by subscription; a new Sunnyside Edition of Irving's Works; a new edition of Poe, edited by Prof. Charles F. Richardson of Dartmouth, and illustrated by Frederick Simpson Coburn. They also announce for fall issue 'The Romance of the Colorado River,' by Frederick S. Dellenbaugh; 'The Hudson River from Ocean to Source,' by Edgar Mayhew Bacon; 'Old Paths and Legends of New England,' by Katharine M. Abbott; and 'Rhode Island: Its Making and Its Meaning,' by Irving Berdine Richman.

'Four Addresses,' by Henry L. Higginson, with portraits of Harvard's benefactor, is forthcoming from the Merrymount Press.

A very pretty little book, edited by Alexander Jessup, 'The Best of Balzac' (L. C. Page & Co.), is described in the preface as the "initiatory volume" in a series the purpose of which is "both introductory and finally selective." "Other volumes," we are told, "embracing the best work of the greatest writers of literature of at least the nineteenth century, will follow." It is to be hoped that the remaining authors will lend themselves more easily to this treatment. Balzac, less than almost any other French writer, will stand being served up in "selections"; and surely none has less need of "introduction" to the English-speaking public. The seven short stories and episodes in this book are perhaps as good as any that could be chosen, but they are certainly not the great novelist's "best." The translation is careful, though somewhat too literal to be altogether pleasing. The volume contains also a twelve-page bibliography, a brief and flimsy essay on the author's works, and a beautiful portrait of Balzac—the best thing in the book.

Had Mary E. Stone Bassett's 'Judith's Garden' (Lothrop Publishing Co.) been the first in which a clever young wife confides to the flower-loving public an intimate relation of her inexperience in gardening; her "garden-delights," as Bacon calls them, and her garden-griefs; her thrills over her flowers, her weeds, and her garden-bugs; her conversations anent all these with a miraculous husband; her successful thrusting off of unwelcome visitors, and her daily encounter with a comic gardener who is sometimes good, sometimes bad—were this the first of such volumes, the gentle reader would have found the book engaging and cheerful. But the little procession of wives who have followed Elizabeth in unstraying footsteps through her inexperiences and the recounting thereof, have somewhat cloyed our appetite; and the last book cannot be read with the zest given to the first. Nor has it the useful bits of instruction about gardening which the "Commuter's Wife" and one English consort conveyed so pleasantly and opportunely to the reader. It is prettily printed, with a cool green border design; and has the green cover which apparently has come to be the hall-mark of garden-books.

Many attempts to condense and put in narrative form the Journals of Lewis and Clark have followed upon Dr. Coues's splendid edition of this classic published a few years ago. One of the very best has recently appeared, entitled 'First Across the Continent: The Story of the Lewis and Clark Expedition' (Charles Scribner's Sons), and edited by Noah Brooks, who evidently knows well the country through which the explorers passed. The salient and striking events of the expedition have been judiciously selected and skilfully woven together, while the great mass of repetitious descriptive matter has been carefully pruned; the whole making a most readable volume of some three hundred pages. A map of the route and a rather heterogeneous assortment of illustrations accompany the text.

The series of "Popular Studies in Mythology, Romance and Folklore" (London: David Nutt) is rendering excellent service in popularizing the latest results of scholarship, in a succession of neatly printed little volumes published at sixpence. A dozen have already appeared, dealing with such varied themes as the fairy mythology of Shakspere, the Ossianic literature, Celtic and mediæval romance, the Rig Veda, and the popular poetry of the Finns. Written in many cases by excellent scholars, and furnished with ample bibliographical material for further study, these little pamphlets of fifty or sixty pages may well whet the appetite of the uninitiated. The latest volumes to appear are Miss Weston's 'Romance Cycle of Charlemagne and his Peers,' Farraday's 'The Edda: The Divine Mythology of the North,' and J. B. John's study of the Welsh stories of the 'Mabinogion.'

The first instalment of a new work on Mexico, entitled 'Blandt Mexicos Indianere' (Among the Indians of Mexico), by the Norwegian traveller, Carl Lumholtz, has recently appeared, published by Aschehoug & Co., of Christiania. The Indians who form the subjects of the book are cliff-dwellers of Chihuahua, west of the Sierra Madre, with whom this author was in contact for more than five years. The completed work will consist of about twenty-five parts, with numerous illustrations (chiefly from photographs), two colored plates, and a map.

The 'Catalogo Generale della Libreria Italiana, 1847-1899,' in its slow but steady course of publication in Milan (New York: Lemcke & Buechner), opens its second volume with E and proceeds in two parts nearly to the end of F. There is comparatively little to remark in this tract. One of the most prominent native authors recorded is Ugo Foscolo, whose works fill nearly a page and a half, and are still reprinted. Erckmann-Chatrian engendered Italian versions as late as 1898, and in that year even "Fanny" Feydeau underwent a resurrection. Octave Feuillet was "alive" in 1896. Miss Edgeworth has not been ventured since 1872; and "Daniel Deronda" is the only one of George Eliot's novels accessible in Italian. F. W. Faber was drawn upon in 1897. There is a list of eleven items the fruit of our countryman Willard Fiske's versatile activity during his residence in the peninsula.

The works dealing with the Italian Renaissance are legion, but a hearty welcome must be accorded to a new series of special monographs devoted to the literature and history of this period, which has just been announced by the publisher, Sansoni of Florence. It has been appropriately called "Biblioteca Storica del Rinascimento," and is edited by Signor F. P. Luiso, a disciple of Pasquale Villari, whose studies in connection with the life and works of the humanist Leonardo Bruni are well known to students of the Renaissance. In the announcement, which has just been issued, Professor Villari outlines the scope of the series, which will deal with special phases of Renaissance life and culture, with the less known of the humanists, and with minor but significant figures in the historical department of the period. The first volume will appear shortly—Guido Mazzoni's translation of Müntz's important study of the precursors of the Renaissance, with additions by the author. Other volumes announced for immediate publication are Schiaparelli's 'La Casa Fiorentina nei secoli xiv. e xv.,' Sabbadini's 'Scoperte e Divulgazione dei Classici Latini nel secolo xv.,' and Novati's 'Francesco da Fiano ed i Primordi dell' Umanesimo a Roma.' Under such auspices the "Biblioteca" cannot fail to become a successful and important addition to Renaissance studies.

The Spanish universities, like those of several other Latin countries, have preserved the pleasant custom of beginning the academic year with an inaugural address by a distinguished professor. At the University of Barcelona, one of the most important of the Iberian seats of learning, Prof. Rubió y Lluch devoted his 'Discurso Inaugural' (Barcelona: Montserrat) to a study of the essential characteristics of Catalonian literature. The scholarly activity of Menéndez y Pelayo has done much to foster an interest in the different phases of Spanish culture, as component parts of its historic life, and in this address Prof. Rubió y Lluch exhibits the same rigid historical method and splendid sanity of judgment. A patriotic impulse must, of course, be expected in a paper read before an audience in the Catalonian capital, but the attention of scholars has perhaps been focussed too much on the life and literature of Castile, to the exclusion of research in

other lines. A literary centre which has produced such a poet as Ausias March and such a scholar as Raymond Lully is not undeserving of study, and its claims have never been presented with greater force and acuteness than by Prof. Robió y Lluch.

We learn from the *School Review* for May that, at the classical conference held at Ann Arbor in March, Professor Hempl read a paper in which he made a brief report on the progress of his investigations into the early history of the Runes, the first letters used by our Teutonic ancestors. These studies have of late taken an important turn in favor of Professor Hempl's contention that the Runes are a Western Greek alphabet which came to the Teutons between 600 and 550 B. C.; and disclose an unsuspected Teutonic numerical notation. This notation reveals important facts, not only as to the character of the Teutonic numerical system and the time of the Teutonic shift of consonants, but also as to the development of the numerical notation of the Greeks. Professor Hempl's studies will soon be published in full in various philological journals.

The most interesting of the large instalment of historical manuscripts published in the June Bulletin of the Boston Public Library is Daniel Webster's answer to a request of Theophilus Parsons for advice in regard to the conduct of the Boston *Daily Advertiser*. He refers to it as "a very respectable print, conducted with judgment and intelligence," but wishes that the editor, Mr. Hale, "had more disposition to seize on great national questions, discuss them, in all their forms, and awaken a livelier interest in the proceedings of the Gen^{l}. Gov^{t}. . . . If a paper is intended to be a mere chronicle, that is one thing, but if it be meant to perform a political part, it must have discussion, spirited paragraphs, and the power and habit of presenting great truths in a variety of form. In a single discourse repetition is in bad taste. But the press cannot be effective without much of it. It must renew, to-day, the arguments of yesterday, and thus hold up, constantly, the truths which it wishes to impress on the public mind. Well conducted efforts of this kind can alone constitute what we call a vigorous press." Caleb Cushing writes from Washington at about the same time, 1840, that he does not think "there is *immediate* prospect of war with Great Britain." After stating that this country has "done all we can to effect an amicable settlement of the main question," he adds, "I am as fully convinced as you [Henry A. S. Dearborn] can be that the peace, security, and territorial independence of the United States require the extinction of the British power in North America; and to that great end I shall never cease to look. *Delenda est Carthago.*"

The Geological Survey of Canada has recently published the second part of volume ii. of "Contributions to Canadian Palæontology." It consists of a report, by Dr. Samuel H. Scudder of Cambridge, Mass., on the coleopterous fauna of the interglacial clays of the Toronto district, with an appendix by Dr. A. P. Hopkins of Morgantown, W. Va., on the scolytid borings from the same deposits. In a previous paper in this series, issued in 1892, the total number of determined species of insect remains in interglacial beds was stated to be twenty-nine, referable to five families. Since then, as a result of Prof. A. P. Coleman's investigations, several hundred specimens have been obtained, about one-third of them being available for examination. These were almost exclusively elytra of beetles, and form the subject of the present memoir. They consist of fifty-four species, only seven of which have been found before in these beds. All but two of the forty-seven additions are regarded, like those previously described, as extinct forms. The total number of known interglacial forms is now raised to seventy-six, belonging to thirty-three genera and eight families.

It is probable that steps will shortly be taken to preserve the famous rock at Dighton, Mass., whose curious markings have long been a subject of interest to archæologists both in this country and in Europe. A recent careful examination of the rock by a committee of the Old Colony Historical Society of Taunton, to whom it now belongs, showed that the markings are rapidly being worn away by the action of water and ice, and that the rock itself is being chipped and defaced by visitors and relic-hunters. Fully a third of the markings which appeared on the lower surface of the rock, in a picture taken in 1882, have now disappeared. As the rock is submerged at high tide, the problem of its protection is difficult; but as the rock appears to be a detached boulder, weighing perhaps ten tons, its removal to a site above the tide line is thought to be practicable. In this connection, it would be interesting to know more about the large stone slab which lies on the ground behind the rock, and in one corner of which appear to be traces of markings. The face of the rock is very smooth and regular, but the dimensions of the slab correspond in general with those of the writing side of the rock, from which it appears to have been taken. How the slab reached its present position, however, is unknown, nor does it seem to have attracted much attention from investigators.

—In the April *Bulletin of the Geographical Society*, Prof. R. De C. Ward of Harvard uses the Report for 1901 of the Surgeon-General of the Army as a basis for "Notes on Climatology" in review of the medical aspect of tropical climates as affecting our troops. Disregarding the distinction between climate meteorologically considered and the conditions inseparably connected with it, we recognize that prolonged tropical residence diminishes the white man's energy and power of continuous work, and, besides, makes him liable to distressing diseases which, if not peculiar to those zones, at least flourish there with special virulence. Convalescence is slow, if it occurs at all on the spot. Military service renders our troops in the Philippines particularly susceptible to the effects of the climate and to climatic diseases. A special disability is tropical dysentery, of which there are two distinct forms. One is very serious, with an acute course, although not necessarily fatal. The other is marked by gradually increasing relapses, with intervals of remission and apparent recovery. The milder dysentery of temperate climates is also found in the tropics as a third variety. In the chronic form of tropical dysentery, nine times out of ten the only hope for recovery is transfer to a cooler climate. But medical officers as such have no authority to send men beyond the limits of the command, and their judgment is not always transmuted into orders by the officer who has such authority. So the high death- and discharge-rates of the first eighteen months of Philippine occupation were in part due to executive inappreciation of expert advice. The fear of weakening the nominal strength present, and of exciting alarm at home by the arrival of successive shiploads of invalids, does not prevail now, and the men have in that, and in less disturbed conditions, a better prospect.

—Necessarily much grave sickness must be expected among troops suddenly transferred to unaccustomed fields, but Professor Ward errs in supposing that the admission-rate for intestinal diseases of 465.01 per 1,000 for the army at large represents admission to hospital. The rate is that at which men are excused from active duty, for short as well as longer periods, by admission to the sick-list. They may be sent into hospitals, but the majority are not. The soldier is non-effective for the time, but in the United States army the sick-rate is not purely a hospital-rate, but only inclusively, and, of course, it is probable that most of the sick men not in hospital are not seriously ill. In the British army the admission-rate does mean the hospital-rate exclusively, and is, therefore, not comparable with our own. So of the 465.01 only 94.83 were dysentery cases, the others being classed as diarrhœas. In the China expedition the rate for this group was 1,266.54, of which 1,041.60 was for diarrhœa. The total deaths emphasize the disparity in severity between the subdivisions of the group. These were 649, all but 84 being for dysentery; and probably, of the 84, better discrimination at the beginning would have classed a number under the more dangerous disease. In the China expedition, with its enormous admission-rate, there were only 31 deaths, all from dysentery, in this group. But a complete view would add to the mortality of 649 those discharged from the army for disability to the number of 181, as well as those who, incapacitated, remain in service beyond the period of this report. The latter would be accounted for in subsequent reports. The yearly military death-rate from disease in the Philippines of 20.26 per thousand, exclusive of that for discharges for disability, represents that obtaining among vigorous males of selected adult age, in spite of the fact that competent medical attendance is always available. By comparison, in Boston the average death-rate for males between twenty and fifty years old is but 3.42. Professor Ward has credited to a naval medical officer observations upon the China forces made by Majors Banister and Ives, respectively, of the Army medical staff.

—Fifty years have elapsed since the Messrs. Appleton copyrighted their Spanish and English Dictionary edited by Velazquez de la Cadena. The second (English-Spanish) portion of this useful work has just appeared in a separate volume, revised and augmented by Edward Gray, M.D., and Juan L. Iribas, LL.D. Old and outworn words have been freely discarded, and upwards of ten thousand added, all with a

practical aim and for the special behoof of commerce and science, in keeping with the mission of the Isthmian Canal. The pronunciation has been represented anew in accordance with the system approved by the American Philological Association. The volume is very handsomely and clearly printed in a three-column page. Simultaneously, we receive the tenth edition of the English-German portion of Chr. Fr. Grieb's German and English Dictionary, which has been cared for by Prof. Arnold Schröer of the University of Freiburg-im-Breisgau (Stuttgart: Paul Neff; New York: H. Frowde). The etymologies, which have no place in our renovated Velazquez, are here briefly indicated, and while the claims of trade and industry are respected, the effort has been to reflect the living speech of England and America, the cultivated speech; but also the literary language from the end of the sixteenth century. This involves retaining some archaic and obsolete words, and gives the German Dictionary a complexion distinct from the Spanish. The verb *commerce*, for example, as in Milton's "commercing with the skies"; Milton's "rathe" (primrose); Gray's "plod" (his weary way), are all recognized by the new Grieb. In none of these cases is the classic author cited, however; but Shakspere's "hoist with his own petard," is quoted and ascribed under *petard*—a word occurring also in Velazquez, but without a literary citation. Again, both dictionaries have *Lilliputian*, but the German alone has *Big-endians* and *Little-endians, Brobdingnagian, Houyhnhnm*. Both have the verb *trammel*, but only Grieb *to trammel up*. The prepositional government of *averse* (*to* or *from*) is noticed in Grieb alone. In the pronunciation of *pennyworth*, Velazquez follows the orthography; Grieb the English usage ("penn-worth" or "penn-orth"). In both we find *Jingo; interviewer*, defined in Velazquez, but equated in Grieb with "Der Interviewer" (a hideous intruder into pure German); *merrimake*, but *merrimaking* in Grieb alone. Neither contains *co-education, intercollegiate*, or *kinematograph*. Velazquez alone has *appendicitis, automobile, interstate* (commerce), *Lynch* and *Lynch law, Percheron, tsetse*. So Grieb has a monopoly of *quid pro quo, swimmingness* (unattended by *brimmingness*), and *X-rays*. These comparisons will afford some idea of the character of the respective works, which will be alike welcome. The German Dictionary, in its turn, is in triple columns, clearly printed with the usual German economy of packing: *e. g.*, under *human* are lumped thirteen words, each but one of which has a separate entry in the Spanish. Grieb ends with a queer *olla-podrida* of proper names.

—In the field of Dante literature are growths of every sort. Beside the solid fruit of scholarly investigation springs up the light and airy product of impressionistic dilettantism. All of them, provided they be good of their kind, have their interest and utility. 'Dante and the Divine Comedy,' by W. J. Payling Wright (John Lane), bears new testimony to the pervasive charm of the *altissimo poeta*. The little book has a pleasant literary flavor, and may induce some of its readers to make themselves personally acquainted with its hero. After two brief introductory chapters on "Benevento" and "Florence," we have a description of the 'Vita Nuova' and the three *canticbe* of the 'Commedia.' All this is in a popular vein, almost too scrappy even for the general public, and quite unprofitable to the student. In matters of fact, the information given is mainly correct, and one is therefore startled at being told that the "conception of a hell which is graduated and classified is peculiar to Dante." It is somewhat exasperating, also, to meet such unnecessary hybrids as "ante-purgatorio" and "ante-inferno." The identification of the hemisphere of water with the "southern hemisphere" is a common error; uncommon is the transformation of Bertran de Born into "Bertrand of Bearn." The fundamental defect of the work, however, is the failure to recognize the allegorical significance of the 'Commedia'; the "Inferno" is entirely misconceived. The author's attitude toward symbolism may be inferred from his remark that "those who read Dante as poetry and not as theology will not greatly care" what Matelda represents. Nevertheless, in his concluding chapter, he attempts a discussion of the hidden meaning of the first cantos; according to him, "the *motif* of the poem is the conquest of the fear of Death," typified by the wood: the three beasts stand for the World, the Devil, and Death. Here, as elsewhere, his argument is vitiated by the assumption that Dante was an immaculate being—as if the world's greatest song of remorse and redemption could have been written by any one but a "sinner that repenteth"! Two notes, on the name Beatrice, and on Dante's use of the word *bruno*, seem strangely out of keeping with the rest of the volume; they add nothing to our knowledge of the subjects. It is curious that, in a list of twenty-four mediæval Beatrices, the author should have failed to include the lady sung by Raimbaut de Vaqueiras.

—Scholars are to be congratulated when a master, after having for a course of years scattered his teachings broadcast in the perishable form of magazine articles, collects them, with careful revision, in a handy volume which the student can henceforth keep at his elbow. To this process we owe D'Ovidio's 'Studii sulla *Divina Commedia*,' the most important Dante work that has appeared of late. A similar and equally well deserved resurrection now unearths for us fifty-four short treatises by Paget Toynbee, hitherto buried in the various periodicals of three nations. They make a book of some 360 pages—'Dante Studies and Researches' (E. P. Dutton & Co.)—beautifully printed, and indexed with painstaking minuteness. These contributions to Dante lore, ranging in length from less than a page to thirty-seven pages, were originally chips from the workshop in which the author's 'Dictionary' was constructed. Containing, as they do, a full exposition of facts and arguments closely connected with some of the most interesting articles in that volume, but necessarily excluded from it for brevity's sake, they form a valuable supplement to the earlier work. Most of them deal with the sources of Dante's knowledge. Recent investigation has busied itself chiefly with the restoration of the poet's environment. What books did he know, whose lead did he follow, what were the current events, the current beliefs, the intellectual habits of his day? These are the questions that we must answer, if we would clear up the many remaining difficulties of detail in the interpretation of his great poem. Perhaps the most curious of Mr. Toynbee's researches in this line is the one entitled "Dante's Latin Dictionary"—a study of the 'Magnæ Derivationes' of Uguccione da Pisa, from which the Florentine poet derived several odd bits of misinformation. In a somewhat different vein is the interesting chapter on "Benvenuto da Imola and his Commentary on the *Divina Commedia*." The longest article, reprinted from the Sixteenth Annual Report of the Cambridge Dante Society, tabulates the differences between Rajna's recently published text of 'De Vulgari Eloquentia' and that of Dr. Moore's Oxford edition. Not one of the fifty-four studies is without attraction for the serious student of Dante, and not one has lost its value since the date of its original publication.

BUTLER'S TREATY-MAKING POWER.

The Treaty-Making Power of the United States. By Charles Henry Butler of the New York Bar. In two volumes. New York: Banks Law Publishing Co. 1902.

The immediate origin of this work of elaborate research seemingly was, and its evident thesis is, "to justify the ways," not of God, but of our national Administration, to men. If the reviewer's task be difficult, that of the reader is indeed thorny, for a few lines of text are not infrequently followed by pages of notes, so that the book seems an elaborate footnote with a modest suggestion of text. The whole is so weighed down by authority that the notes almost sink the text. The work itself is divided into three parts: The United States as a Nation; Historical Review of the Treaty-making Power of the United States; Judicial Decisions Affecting the Treaty-making Power of the United States, its Extent and Application. These are preceded by an introduction of fourteen pages, in which the author briefly and positively states the problem and the views and conclusions which the volumes are intended to prove and establish.

In abstracted form the conclusions are expressed in the following four propositions:

(1.) The treaty-making power is an attribute of sovereignty; the United States is sovereign (the Union is a grammatical as well as a constitutional fact); the treaty-making power thus inherent in sovereignty was expressly delegated by the Constitution to the Federal Government, so that, in theory as well as in fact, the Government is absolutely sovereign in execution of this power without constitutional or legal hindrance or limitation.

(2.) By the exercise of the treaty-making power, the national Government binds the United States in its sovereign capacity; and the States, as part of this national Union ("All are but parts of one stupendous whole"), are bound by action of the national Government with or without their consent.

(3.) The limitations imposed by the Constitution upon the powers of Congress to legislate on matters intrusted to the States do not apply to acts of Congress passed to carry out treaty stipulations, even although Congress would not have the power to pass such acts in absence of the treaty.

(4.) "That all provisions in State statutes or constitutions which in any way con-

flict with any treaty stipulations, whether they have been made prior or subsequent thereto, must give way to the provisions of the treaty or act of Congress based on and enforcing the same, even if such provisions relate to matters wholly within State jurisdiction." (Vol. I., pp. 5-6.)

If these views be correct, nobody will take issue with the author's conclusion that "the treaty-making power is undoubtedly the most far-reaching of any of the powers possessed by the Federal Government." The views in paragraphs two, three, and four may be and have been sharply criticised, but the authorities cited bear out the author's conclusions; the real question, however, is as to the extent of the treaty-making power delegated to, or residing in, the Federal Government; for if the exercise of the power be proper, the results mentioned do constitutionally follow.

One cannot help wondering what the framers of the Constitution would think of the first and subsequent propositions thus baldly stated. It was their evident intention to form a "more perfect union"—the Articles of Confederation had been far from perfect; but it was generally supposed that the States were to be more than geographical units, and that, while the Federal Government was to represent the United States with foreign nations, and to have the power to enforce its rights against all members of the Union, the States were to remain in charge of their purely domestic and internal affairs. The first ten amendments to the Constitution, so nearly contemporaneous as to be for practical purposes parts of that instrument, acted as a "Bill of Rights" for the express purpose of restraining the exercise of Federal power, and the Tenth Amendment expressed this intention in no uncertain language: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." It should be said, however, in speaking of delegated powers, that the uniform exposition of the Constitution from an early date has given to the implied powers of Congress the force of an express delegation, so that not only that which is expressly delegated, but also that which is implied, necessary or proper to the execution of an expressly delegated power or right, is within the Constitutional province of Congress. (M'Culloch vs. Maryland, 4 Wheaton, 316.)

The Tenth Amendment is cited as indicative of the jealous way in which the States regarded the Union, for its exact language would not apply to an express delegation, and the treaty-making power is expressly delegated. Article ii., section ii., says: "He [the President] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur," and, to the treaty thus made, effect of law is given by article iii., section ii.: "The judicial power shall extend to all cases in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority." To be sure, there is a formal difference between an act of Congress and a treaty; for the one is the joint product of President, Senate, and House of Representative (unless passed over the veto), while the other is the act of the President and two-thirds of the Senate present. In form they differ; in substance they have the same effect, that of law; for if ratified, the treaty has the binding effect of law, and in law it is binding upon the courts as such, and subject to their judicial interpretation. As a law it repeals a prior act of Congress inconsistent with its provisions, just as a subsequent act of Congress repeals the treaty, if inconsistent with its provisions, no matter how solemnly the treaty may have been framed and ratified. Nay, Congress may pass an act for the express purpose of repealing or abrogating the treaty, and such act of Congress is binding upon the United States and its courts, although such action may well give rise to diplomatic difficulties, since, although a treaty is a municipal law of the United States, it is a contract as regards a foreign Power, and its violation gives rise to action for its breach, from which damages or war may result. (Whitney vs. Robertson, 124 U. S., 190.)

That an act of Congress is subject to Constitutional limitation upon the powers of Congress is beyond doubt, and an attempted exercise by Congress of a power prohibited, or not delegated, or in excess of delegation, will be set aside by the Supreme Court, on a case properly brought, as unconstitutional, and therefore void and of no effect whatever, as to whole act or as to part, as the case may be. This is unquestioned doctrine since the case of Marbury vs. Madison (1 Cranch, 137). Now if a treaty is the law of the land, and, notwithstanding its formal difference, has the force of law, and if a law of the land is subject to Constitutional limitation, it would seem to follow that a treaty as a municipal law of the United States is subject to the Constitution by virtue whereof it is declared to be law and given such effect. This Mr. Butler denies, and asserts that the United States in its foreign relations is "not *federal* in its character, but *national*, and that as such it possesses, and exercises, every function exercisable by any other sovereign government in the world" (vol. i., pp. 19-20). Foreign governments are not subject to Constitutional limitations in exercise of their sovereignty; hence the United States is not.

If our Government were like theirs, such would or might be the case; but our theory and practice in matters governmental are different, and our "sovereign body" may well be, and is, restrained by Constitutional inhibitions. Mr. Butler admits that restraints do and must exist, but maintains that such restraints are moral rather than legal. It is his mature opinion, therefore, that no legal check exists upon the exercise of the treaty-making power by the branch of the Government to which it has been expressly delegated, although, as suggested, he concedes that certain practical restraints are well known and recognized. A President, for example, would be disinclined to negotiate and submit for ratification a treaty which would cost him his personal popularity or which might disrupt or injure his party. If he did, the Senate would be unlikely by a two-thirds vote to ratify such a treaty, for personal and political, if not for Constitutional, reasons.

A geographical boundary depending on the personal whim or caprice of a neighbor is not considered safe in the ordinary affairs of life, and a restraint resting in the whim, caprice, or rudimentary sense of justice of any one man or any body of men, seems foreign to our institutions. The Constitution was framed for the express purpose of interposing the letter of the law to the claim or exercise of arbitrary power, and the peculiarly distinctive function of our Supreme Court is to set aside ill-founded claim or assumption of power on the part of the lawmaker. Once admit that the power exists to do the thing in question, the Supreme Court will not examine into the reasonableness, expediency, or propriety of the act; for, if the power exists, legislative discretion is beyond the judiciary. (M'Culloch vs. Maryland.) If, therefore, the treaty-making power exists, as claimed by Mr. Butler, there is no judicial check to its exercise. We hold, however, that two checks do exist, and that they either are or ought to be sufficient to keep the treaty-making power and its exercise within the framework of the Constitution. The first is clear, definite, and beyond controversy; the second is general in its nature, and indefinite, but ever existent.

It is admitted that a treaty is the law of the land, and as such is binding upon all departments of the Government; but it is clearly established that there are two kinds of treaties or treaty-laws. In the first case, a treaty-law may be complete in itself and therefore require no coöperation of Congress to carry it into effect. Such a treaty is a contract between the respective nations parties to it, and binds them upon signature or ratification. This distinction is laid down authoritatively by Marshall, C.J., in Foster & Elam vs. Neilson (2 Peters, 253), and is not open to question. On the other hand, it is laid down in the same case, and no less authoritatively, that a treaty requiring legislation to complete, supplement, or carry it into execution, is of no effect without an act of Congress, and that if Congress refuses to legislate, the treaty or treaty provision remains of no force and effect. Indeed, the treaty is not executed until Congress has passed the act required, even although the other provisions needed no act of the legislature. (Vol. ii., p. 71.)

We waive the question whether it is the duty of Congress to pass a legislative act in aid of a treaty. Such duty, if it exists at all, is a moral not a legal one, and we are dealing with strictly legal, not moral or ethical obligations. Most treaties require money at one time or another to carry them fully into effect; and as bills for revenue must originate in the House of Representatives, and as all laws other than treaty stipulations must pass Senate and House, it necessarily follows that all treaties requiring supplemental legislation, whether in form of law or appropriation of money, are subject to Congress, especially to the House of Representatives. That is to say: The treaty may be negotiated by the President and ratified by the Senate, but unless it be absolutely complete in itself and needs neither Congressional legislation nor appropriation, it cannot be enforced without the coöperation of Congress. Such is the doctrine promulgated by the great Chief Justice, and followed as the established doctrine of the Supreme Court. The President and Senate may indulge in building

air castles, but their projects remain paper projects if Congress looms up defiant and controlling.

If it be urged that this action of Congress applies only to the second class of treaties, we may admit it without argument. The controlling power of Congress is more evident in the second class, where a treaty is suspended until legislative action gives effect to its provisions; but the power of Congress over treaties of the first class is not less real because less obvious, for a treaty is only a law at best, and Congress may repeal or abrogate it at its pleasure, provided the majority overcomes an interposed vote. The instant a treaty of the first class requires money for its execution, the House of Representatives assumes control.

But, even in the first class, there is, as Mr. Butler admits, a protection against the sovereign exercise of this sovereign power, a check ever existing and not lightly to be trifled with, namely, the fundamental principles, the genius or spirit, of our institutions. The doctrine that the spirit of free institutions has something to do with the letter of the law was not unheard in England, where the courts have never undertaken to set aside acts of Parliament in the manner with which we are familiar. Three statements (dicta they should properly be called), follow: "Where an act of Parliament," says Lord Coke, "is against common right and reason, or repugnant or impossible to be performed, the common law will control it, and adjudge it to be void." Lord Hobart's dictum is well known: "Even an act of Parliament made against natural equity, as to make a man judge in his own case, is void in itself"; and Lord Holt at a much later day referred with approbation to the language just quoted. If it be remembered that the lawyers of the Revolution were familiar with and quoted these dicta, it is seen that mere law as such, without restraint, did not find favor in their sight.

Mr. Butler informs us that the Supreme Court has never set aside a treaty as in excess of power; but it is evident that the Supreme Court claims that the treaty-making power is subject to some control and supervision other than the whim of a President and two-thirds of the Senate present at the vote, as appears sufficiently from the following citation:

"The treaty power, as expressed in the Constitution, is in terms unlimited except by those restraints which are found in that instrument against the action of the Government or of its departments, and those arising from the nature of the Government itself, and of that of the States. It would not be contended that it extends so far as to authorize what the Constitution forbids, or a change in the character of the Government or in that of one of the States, or a cession of any portion of the territory of the latter, without its consent. But, with these exceptions, it is not perceived that there is any limit to the questions which can be adjusted touching any matter which is properly the subject of negotiation with a foreign country." (Geoffery vs. Riggs, 133 U. S. 258, 1890.)

The reports contain many like statements; but inasmuch as the question has never arisen for judicial construction, such statements are, as Mr. Butler says, mere dicta. His statement to the contrary, supported as it is by publicists and politicians, cannot be given greater weight; nor can the academic opinion or dictum of a text-book be held to wipe out a line of oft-repeated doctrine. Moreover, judicial dicta have in many cases been the basis of decisions in later and carefully considered judgments. The dicta of Marshall, C. J., in Marbury vs. Madison (1 Cranch 137) and Brown vs. Maryland (12 Wheaton 419) have been bodily incorporated into later decisions of the court. And it may be said generally that the dictum of a learned and careful judge often carries more weight than the decision of many a court.

In the reviewer's opinion, the treaty-making power was conferred upon the Federal Government by express Constitutional delegation, and in that delegation all powers incidental to its exercise were included. It does not seem necessary, for the purpose of the treaty-making power, to consider the vexed question elaborately discussed in Part I., whether the United States is, or are, a sovereign nation, for by express provision the general Government is supreme or sovereign in foreign affairs, so far as the individual States are concerned. Mr. Butler considers this sovereignty of fundamental importance in the government of the Territories and "dependencies." This, likewise, seems a question of municipal, and not of international law, for the right to govern and regulate vests in the Government by direct Constitutional delegation. Article iv., section iii., clause 2 says: "The Congress shall have power to dispose of and make all needful rules and regulations respecting the territory or other property belonging to the United States." Can it be doubted that the Congress is limited in its exercise of this power by the Constitution which conveys the power?

Mr. Butler's book is in one sense a brief for expansion and imperialism. Now expansion is, it would seem, a mixed question of expediency and constitutional power, and not one of European international law. It is no part of our problem whether a European sovereign nation, such as Great Britain, could hold and legislate for Porto Rico and the Philippines. The question is, Does the United States under the Constitution have the power? International law is indeed binding upon the United States (The Paquette *Habana*, 175 U. S. 677, at p. 700), but it is the international law applicable to our situation; and if resort be made to "the works of jurists and commentators," it is not for the "speculations of their authors concerning what the law ought to be, but for trustworthy evidence of what the law really is." The Constitution recognizes international law, but the constitutional right exists to modify the traditional international law of Europe. It would seem that the question of power over the Territories and dependencies of the United States is a mere municipal matter, or, if one of international law, then of international law as existing and modified by our Constitution.

Part II., the historical review of the treaty-making power, is admirably done, and no exception can be well taken to this division of the work. Part III., dealing with the judicial construction of the power, is excellent. We must, however, for the reasons above set forth, take exception to the conclusion that the treaty-making power is, legally speaking, untrammelled. Volume i. abstracts the Insular Cases, with the Constitution of the United States not inaptly relegated to a second place; volume ii. contains a careful alphabetical summary of all treaties and conventions of the United States concluded with foreign Powers. The ample index places the entire contents at the reader's disposal, and the typographical slips, as regards names, figures, and dates, are singularly few. The book as a whole is not only an exceedingly valuable and timely contribution to international and constitutional law, but is also the first adequate and scientific treatise on the treaty-making power of the United States. The States-rights school does "still persist," as Mr. Butler rightly states (vol. i., p. 23), and there are not a few, including four eminently respected justices of the Supreme Court, who have the "temerity to affirm" "that our Government has in any way exceeded, or is exceeding, its powers either in acquiring or in governing our new possessions" (vol. i., p. 41). They likewise feel that a denial of justice as safeguarded by the Constitution is a much more serious thing than a denial that the United States is, or are, technically a sovereign nation, to deny which, says Mr. Butler, "is to assert that the United States is not a completely sovereign Power, and therefore is not entitled to rank as one of the great sovereign Powers of the world; this indeed would be a mortifying position for a country with over seventy-five million inhabitants and a territorial area of over three million square miles."

RECENT BRITISH POETRY.

When an author has already printed five volumes of poems, the chance is that "all he cares to preserve"—as prefaces say—will be, as in the case of Mr. Arthur Symons, two tolerably substantial octavos entitled 'Poems' (Lane). What will be his rule of selection is harder to say, but after a man of rare gifts has spent the prime of his life in putting the spirit of Verlaine into English verse, he must pay the penalty of his instruction. When he classes himself, for instance, with a rat nailed to a granary floor (ii., 125), or his soul with dog's meat, as in the following verses, it is hard for the reader not to take him at his own word (ii., 134, 135).

THE DOGS.

My desires are upon me like dogs, I beat them back,
Yet they yelp upon my track;
And I know that my soul one day shall lie at their feet,
And my soul be these dogs' meat.

My soul walks robed in white where the saints sing psalms,
Among the lilies and palms,
Beholding the face of God through the radiant bars
Of the heavenly gate of stars;
The robes of my soul are whiter than snow, she sings
Praise of immortal things;
Yet still she listens, still, in the night, she hears
The dogs' yelp in her ears.

. . . . . .

I have prayed, God has heard; I have prayed to him, he has heard;
But he has not spoken a word;
My soul walks robed in white among lilies and palms,
And she hears the triumphing psalms;
But louder than all, by day and by night, she hears
The dogs' yelp in her ears;
And I know that my soul shall one day lie at their feet,
And my soul be these dogs' meat.

In general, the measure of this poet's self-objurgations is so strong that the severest critic may sometimes be tempted to praise as art what he cannot commend

in spirit, as in a poem so tender and thoughtful as this, for instance (ii., 218):

THE CRYING OF THE WATER.

O water, voice of my heart, crying in the sand,
All night long crying with a mournful cry,
As I lie and listen, and cannot understand
The voice of my heart in my side or the voice of the sea,
O water, crying for rest, is it I, is it I?
All night long the water is crying to me.

Unresting water, there shall never be rest
Till the last moon droop and the last tide fail,
And the fire of the end begin to burn in the west;
And the heart shall be weary and wonder and cry like the sea,
All life long crying without avail,
As the water all night long is crying to me.

Or he may dwell on the exquisite rhythm of this, the closing poem of the two volumes (ii., 221-2):

Faustus— . . . Helen is dead
These many thousand years; but what are years?
Time is the slave of thought; a little thought
Sets back the clock of the ages; this hour that strikes
Is not so sure for me as Helen's hour.
I call on Helen: Helen is the thought
I summon with; I form out of my soul
A bodily Helen, whom these eyes behold.

Helen—Have I slept long? You waken me from sleep.
I have forgotten something: what is it?

Faustus—There is much wisdom in your beauty. Eyes
That have looked deep into the hearts of men,
When men, setting their lips on them, forgot
All but desire of some forgetfulness,
Remember many secrets; your eyes are grave
With knowledge of the hearts of many men.

Helen—I have forgotten all; if I have looked
Into the hearts of men, I have but seen
A little eager world, like to my own.
A world my own has copied; they desire
That which I have to give them, I in them
Their own desire.

Faustus—They see you not; they see
Another phantom Helen in the soul,
And they desire what you can never give.

Helen—What is the soul, and what is that desire
Of man which Helen cannot satisfy?

Faustus—O Helen, we are sick, sick of the soul.
It is an ancient malady, and clings
About our blood these many thousand years.
We are born old, and this decrepit soul
Is like a child's inheritance, that pays
The price of others' pleasure; we are born old,
Old in the heart and mournful in the brain,
Hunters of shadows, feeders on food of sleep,
Hoarding a little memory till it rots,
We have forgotten day, the instant day,
And that to-morrow never shall be ours.

Helen—To-morrow never need be ours; to-day
Is greater than the heart of any man.

Note the changing cadence of these lines and the controlling harmony of their structure. In poetic skill and the analysis of passion Mr. Symons stands at the head of all British poets of his generation, assuming Bailey and Swinburne to represent a previous generation. Yet there are times when one would give them all for a dozen lines so pure and high as this song in William Watson's little pamphlet, 'New Poems' (Lane):

LEAVETAKING.

Pass, thou wild light,
Wild light on peaks that so
Grieve to let go
The day.
Lovely thy tarrying, lovely too is night;
Pass thou away.

Pass, thou wild heart,
Wild heart of youth that still
Hast half a will
To stay.
I grow too old a comrade, let us part,
Pass thou away.

It is to the merit of both these poets that they have had their own standard, for better or for worse, and, above all, that they have not had their heads turned by easy successes. For any young poet who pines under belated praise, there can be no more consoling lesson than to observe the harm so often done by premature laudation.

Among the poets whom Professor Palgrave especially quotes, both in his 'Treasury of Sacred Song' and in the second series of his 'Golden Treasury,' is the Rev. Richard Wilton, Canon of York and Rector of Londesborough, who publishes a little volume, 'Lyra Pastoralis: Songs of Nature, Church, and Home' (Methuen). The three themes of his song are well represented, although it must be owned that the church bells predominate. He dearly loves the English rural life, remembers with gratitude that Henry Vaughan's desecrated grave was restored by the lovers of his poetry in answer to an appeal from the American poetess, Louise Imogen Guiney, and himself wrote the verses placed on Washington's tomb on occasion of the one-hundredth anniversary of his death, together with the Earl of Londesborough's wreath of oak, laurel, ivy, and yew. He also wrote for the Rev. Mr. Horder's 'Treasury of American Sacred Song' this prologue addressed to "The Sacred Poets of America" (p. 114):

As from the East unto the utmost West
God bids the banner of His lightning shine,
The flashing signal of the Face Divine
With whose fair radiance earth may soon be blest:
So speeds the Heavenly Muse, at His Behest,
Across the waters; so the spreading vine
Of sacred poesy, with clusters fine,
By Western airs is welcomed and caressed.
O ye whose sires our English fields have trod,
By holy Herbert's feet made hallowed ground,
His dower of truth and beauty ye have found;
With you still buds and blossoms Aaron's rod,
Proclaiming you the poet-priests of God,
To wave the incense of His praise around.

'A Tale of True Love, and Other Poems,' by Alfred Austin, poet laureate (Macmillan), is dedicated to President Roosevelt, and has a special and rather kindly preface to the American edition. A fatal habit of bathos has always lingered around Mr. Austin's verse, with jingling phrases which helplessly defeat their own aim. Thus, in his poem "In the Forum," where there should be, of all places, a measured dignity, he sings to us only such lines as these (p. 58, 60):

"With waves of song from wakening lyre
Apollo routs the wavering night,
While, parsley-crowned, the white-robed choir
Wind chanting up the sacred height.
. . . . . .
The saint may seize the siren's seat,
The shaveling frown where frisked the Faun;
Ne'er will, though all beside should fleet,
The Olympian Presence be withdrawn.

Here, even in the noontide glare,
The gods, recumbent, take their ease;
Go look, and you will find them there,
Slumbering beneath some fallen frieze.

Nothing is more uneven, just at this time, than the unequal distribution between England and Ireland of really original poetic genius. Fortunate is that reader who finds, in a freshly arrived parcel of London books, a thin volume of thirty or forty pages which bear the name, we will not say of William B. Yeats, but of such feminine rivals as Dora Sigerson (Mrs. Clement Shorter). This is the case even if the book has a title no more winning than that of 'The Woman Who Went to Hell, and Other Ballads and Lyrics' (De La More Press). The title-poem of the book, founded on an Irish legend, might have come without change from Scott's 'Border Minstrelsy'; and the "Man Who Trod on Sleeping-Grass" is a perfect fairy tale. As being the shortest among the poems, not necessarily the best, we copy the pretty fancy based on the wild flower known in England as Lords and Ladies, and in America as the Wake-robin or Indian Turnip (*Arum triphyllum*) (p. 36:)

THE WATCHER IN THE WOOD.

Deep in the wood's recesses cool
I see the fairy dancers glide,
In cloth of gold, in gown of green,
My lord and lady side by side.

But who has hung from leaf to leaf,
From flower to flower a silken twine,
A cloud of grey that holds the dew
In globes of clear enchanted wine,

Or stretches far from branch to branch,
From thorn to thorn, in diamond rain?
Who caught the cup of crystal pure
And hung so fair the shining chain?

'Tis death, the spider, in his net,
Who lures the dancers as they glide,
In cloth of gold, in gown of green,
My lord and lady side by side.

Another Irish exile book, with similar touches of melody, is 'The Queen's Chronicler, and Other Poems,' by Stephen Gwynn (Lane). In this the most striking poem is "The Woman of Beare" (p. 80), adapted from Prof. Kuno Meyer's literal version of an Irish poem; but this is too long for quotation, while the voice of the Irishman calling from London is more modern and simple and tender (p. 24):

IRELAND.

Ireland, oh Ireland! centre of my longings,
Country of my fathers, home of my heart!
Overseas you call me: *Why an exile from me?*
Wherefore sea-severed, long leagues apart?

As the shining salmon, homeless in the sea depths,
Hears the river call him, scents out the land,
Leaps and rejoices in the meeting of the waters,
Breasts weir and torrent, nests him in the sand;

Lives there and loves, yet, with the year's returning,
Rusting in the river, pines for the sea,
Sweeps back again to the ripple of the tideway,
Roamer of the waters, vagabond and free.

Wanderer am I like the salmon of the rivers;
London is my ocean, murmurous and deep,
Tossing and vast; yet through the roar of London
Comes to me thy summons, calls me in sleep.

Pearly are the skies in the country of my fathers,
Purple are thy mountains, home of my heart.
Mother of my yearning, love of all my longings,
Keep me in remembrance, long leagues apart.

'The Hours of the Passion, and Other Poems,' by Harriet Eleanor Hamilton-King (Grant Richards), is one of those pure outpourings of a woman's heart, profound, pathetic, almost mystical—their inspiration drawn from the Bible on one side and Dante on the other—which reveal a life of sorrow ending in triumph. The most striking among the poems, perhaps, is one supposed to be addressed "To Dreyfus: from the Crucifix," as if proceeding from the figure of a white Christ on a black cross which hung on the wall of the Court of Justice. It begins with these strong and direct lines (p. 127):

"My brother! O refuse me not the name,
Our race at least, thou knowest, is the same;
My mother was a Jewess, even as thine,
And I was born and died in Palestine.
Even now we gaze into each other's eyes
Across the crowded court—no barrier lies
Between us—thou and I, and none besides,
Hold converse; and thy tortured soul abides
Safe in the hands that will not let thee fall;
I too stood once within the Judgment Hall.
Thine eyes of martyrdom still, still they fix
Their steadfast gaze upon the Crucifix.
What do they see? Are not these answering eyes
Heavy with weeping for thine agonies?
Behold the passion of thy bleeding heart
Tears in my side the dripping wound apart;
In every limb and line dost thou not know
The reflex of thyself and all thy woe?"

To the lay reader, however, undoubtedly the most charming poem will be the one that is most secular, and paints something in the English landscape which never fails to charm the American (116):

THE FIELDS OF LAVENDER.

The fields, the fields of lavender!
Beneath the deep-blue August sky,
Before the startled wayfarer,
Spread up and down in waves they lie;
So unexpected, so unknown,
They seem a secret of their own.

You come upon a sheeted sea
Of one rich amethystine hue,
Spread out before you suddenly,
Far as the dazzled eye can view;
Hid in a hollow of the land,
A purple hollow vast and grand.

Purple and purple, such a shad
As was not dreamed that earth could show;
The light and ruffling breezes made

The purple shadow deep below:
Down in the valley, up the hill,
One soft unbroken purple still.

With white wings fluttering to and fro,
White wings of countless butterflies,
That like minute cloud-shadows go
Over the rustling field, that lies
As a strange world revealed to sight,
Where the freed souls have taken flight.

The volume called 'India's Love Lyrics,' collected and arranged in verse by Laurence Hope (Lane), has attractive titles in its table of contents, as "The Teak Forest," "Deserted Gipsy's Song," "Palm Trees by the Sea," "The Regret of the Ranee in the Hall of Peacocks," and "This Month the Almonds Bloom at Kandahar." These in sound befit Sir Edwin Arnold's earlier and more poetic volumes, but there is in them far less of the lyric ring and more monotony of mere lusciousness. It is not explained whether the poems are pure fancy or are supposed to be translations. Perhaps the one that comes the nearest to the flavor of Arnold, or even of Kipling, is the following, a poem in which the perpetual meeting and parting of the East and West is told with something approaching vigor (p. 143):

ON THE CITY WALL.

Upon the City Ramparts, lit up by sunset gleam,
The Blue eyes that conquer, meet the Darker eyes that dream.

The Dark eyes, so Eastern, and the Blue eyes from the West,
The last alight with action, the first so full of rest.

Brown, that seems to hold the Past, its magic mystery,
Blue, that catch the early light of ages yet to be,

Meet and fall and meet again, then linger, look, and smile,
Time and distance all forgotten, for a little while,

Happy on the city wall, in the warm spring weather,
All the force of Nature's laws drawing them together.

East and West so gaily blending, for a little space,
All the sunshine seems to centre round th' Enchanted place!

One rides down the dusty road, one watches from the wall,
Azure eyes would fain return, and Amber eyes recall;

Would fain be on the ramparts, and resting heart to heart,
But time o' love is overpast, East and West must part.

Blue eyes so clear and brilliant! Brown eyes so dark and deep!
Those are dim, and ride away, these cry themselves to sleep.

"*Oh, since Love is all sweet, the sob so near the smile,*
Blue eyes that [illegible] our us, is it worth your while?"

'The Ma[illegible]ws,' by Arthur E. J. Legge (Nu[illegible]s curiously the once famous poem 'Festus,' in its mingling of old and new, the Saxon name Athelstan, and the French Coralie, great ladies, revolutionary orators and ecclesiastics and Salvationist preachers, all discussing political and moral questions, interspersed with a suicide on the stage and the sudden death of the heroine, after singing the hero a song of which this is the last verse, with its outcome as appended (p. 114):

Then will your memory lose the sting,
And love, once broken and incomplete,
Will glide through the dusk with new-plumed wing,
And lay my laughing soul at my feet.
But now will I fiddle a wilful note;
My heart is tired of seriousness.
Decked for a carnival goes my boat;—
I want some chocolates—ah, one kiss.

[*She starts up and stretches out her arms to him. But even as he moves to meet her, her head drops, her eyes close, and she sinks back dead.*]

Richard LeGallienne continues the impertinence of imitating and vulgarizing Omar Khayyam in what he calls 'A Paraphrase from Several Literal Translations' (Lane), printing the result as a new edition of that copyrighted in 1897, his place of publication being now Minneapolis, U. S. A. William Gow, in his 'Drift of Isla' (Stock), offers some half-Scotch strains, unoffensive and rather pleasing; and Manus O'Conor prints a quarto book in double columns, 'Old-Time Songs and Ballads of Ireland' (The Popular Publishing Co.), containing a great supply of Irish songs, eminently convivial, yet not quite beyond the pale of good society. Mr. W. Sapte, jr.'s 'By the Way Ballads: Being Some Trivial Tales in Varied Verse' (Dutton) has a title which most singularly conveys its precise quality, but it cannot be denied that there is fun in it, both in ballads and illustrations. Cockney humor is not the choicest of all humor, to be sure, but at its best it is quite irresistible.

The Children's London. By Charlotte Thorpe. Illustrated by William Luker, jr. Charles Scribner's Sons. 1902.

This sumptuously got-up book, adorned with charming illustrations, really is what its title implies, a book for children. They must be intelligent children, and not mere babes; but the book describes for them just those Sights of London most interesting to children. The Tower fitly comes first, with its memories of far-off things, of Kings and Queens, Princes and Princesses, warriors, nobles, priests, courtiers, whose tears have fallen on those gray stones, whose sighs seem yet to echo like a dying summer breeze through the narrow corridors and darksome cells. The little Princes, who vanished from mortal eye in these very shadows; the lovely vision of Anne Boleyn, who paid so dear for a crown; the sweet pale ghost of Jane Gray; the bright figure of Elizabeth; the courtly spectre of Ralegh—the children will see them all. They will shudder at the rack and the thumbscrews, and their young blood will run cold at the sight of the axe; and when they come to the armory, they will feel as if they were awaking from a dreadful dream. There is nothing in the book so exciting as the Tower, but the author knows that children, like their elders, have soon had enough of tragedy, and she takes her little flock to more cheerful scenes—to the Foundling (the children will not understand one-half of *that* tragedy), and then to the Zoo. Here the illustrations are profuse, and have the merit of making the animals appear interesting; the expression of the elderly elephant, disgusted to see all the buns going to the young hopeful next door, is especially good. To read this chapter is almost as good as going to the "Zoo." We are glad to see so much space given to the Natural History Museum at South Kensington, but we hope that the pair of black-headed gulls from the Isle of Mousa, in Shetland, were not killed to adorn the Museum. These gulls made their nest in a sheep-walk, and, when they found out their mistake, would not sacrifice their eggs, but remained sitting, and let the sheep jump over them. If the sheep respected them, we should be sorry to think that the shepherd did not.

Miss Thorpe has wisely left most of the treasures of the British Museum to the writers of guide-books for children of a larger growth—it would be too much to expect a real child to clothe with flesh and blood those miles of stone men and women—and has devoted much more space to the Abbey, which always impresses children, to the National Gallery, and to Madame Tussaud's. "Waxworks" are to children what picture-galleries and museums of sculpture are to their elders, and we are glad to see the waxworks of the Abbey duly mentioned. Not to go into further detail, till we read this book we had not realized that London has so many sights for children. The country children, who have not seen them, will want more than ever to "go to London"; and the London children, who already know them, will want to see them again, and notice all they missed the first time. Miss Thorpe's book will leave on her child readers the impression of a kindly grown-up person, who knows all about everything, and enjoys seeing it all as much as they do themselves; and this is what a child likes in a guide.

Little Memoirs of the Nineteenth Century. London: Grant Richards; New York: E. P. Dutton & Co.

The lady whose pen-name is "George Paston" keeps to the line of her former work in that named above. Her themes, mainly suited to her easy and sketchy style, require less in the way of research than of presentation, and her handling of them aims rather at the reader's convenience and mild amusement than at increase of the sum of human knowledge. All were minor celebrities, "meaner beauties," mostly of the literary firmament. From Lady Hester Stanhope "we gain a general impression of wasted talents and a disappointed life." Poor Haydon, whose ideas soared above his ability to enforce them, and whose vast pictures failed to pay his debts, often painted, according to the acute criticism of Mr. Watts, "as though, bored by a fixed attention that had taken him out of himself, yet highly applauding the result, he had scrawled and daubed his brush about in a sort of intoxication of self-glory." In contrast with these brilliant failures is the respectable and useful mediocrity of the Howitts; and between these extremes, faulty enough for censure, picturesque enough to be remembered, come Lady Morgan the Irish novelist, and two exotics who spent much time in England and wrote much thereon, Prince Pückler-Muskau and our own N. P. Willis. The German prince, soldier, and landscape-gardener, wealthy spendthrift and promiscuous Don Juan, affords material for perhaps the most interesting of these memoirs. The futile searches of this "male Ninon de Lenclos" for a wealthy spouse are material for comic opera; he preserved "carefully corrected drafts" of his numberless epistles to various charmers, endorsed, "Old love-letters, to be used again if required." Yet he rode with his King through the war of 1866, and at eighty-five offered his sword for that with France, and was "deeply mortified" when it was declined. Forty years earlier Goethe had praised his book on England, and confided to this unsafe channel his rash belief that the Waverley Novels were written on the plan afterwards credited to Dumas; that Scott "furnished the plot, the leading thoughts, the skeleton of the scenes, then let his pupils fill them up, and retouched them at the last." He seemed to think it "not worth the while of a man of Scott's eminence to give himself up to such a num-

ber of minute and tedious details." A fellow-feeling might have made George Paston somewhat kinder to N. P. Willis, whose work, however slight, was fully as substantial as that of his latest critic—was, moreover, done at first hand, and is not without human touches and elements of historic value. That he was a figure in his day is instanced by the Boston merchant's "guess that Go-ēthe was the N. P. Willis of Germany." Much is made in 'Little Memoirs' of Willis's blunders; probably none of them was worse than this writer's reference to Willis's biographer as "Mr. *De* Beers."

In My Vicarage Garden and Elsewhere. By Canon Ellacombe. John Lane.

Flowers and Gardens. By Forbes Watson, Edited by Canon Ellacombe. John Lane.

The pleasure which we derive from gardens, when we do not have to do the weeding, is one of the highest and purest in this world. But when one's back is cramped and broken by the unequal struggle with the tramp vegetation which we call weeds, all pleasure dies out; the flaming sword at the closed gate is behind us, and only thorns and brambles lie before. The chief charm of Eden was the entire absence of weeds and weeding. And that is the charm of these two delightful books. To be sure, the Canon does not wholly ignore weeds, any more than he would deny the existence of other sorts of evil, but he treats them just as a Canon should, with great reserve. For instance, he says: "I am one of those who think that weeds in a garden are, within a certain limit, not altogether an unmixed evil." One's heart warms to a Canon like that. When weeds pass beyond the certain limit noted, the Canon proceeds against them in a truly cautious way. He tells us:

"I should class the plantain as the worst of all weeds, especially to a good lawn. There are many plans for destroying it, such as specially made spuds, instruments for inserting sulphuric acid or other poison into the plants, etc., and none of them succeed completely. But a complete remedy can be found in common table-salt. Place a piece about the size of a hazel-nut on the very middle of the plant in hot dry weather. Don't spread it, and don't make a hole in the plant, but leave the salt on it, and in two or three days the leaves will blacken and the root so completely perish that I have known a hole left in the grass of two or three inches diameter. This soon fills up, and the plant will not appear again. *Experto crede.*"

The same device has been less successfully applied to the catching of birds; in their case, it is a little more difficult to deposit the salt just where it will be most effectual.

It is with a thorough-going optimist that we walk in the Vicarage Garden. For a great many pleasant years its owner has been a diligent student of the attractive phases which plants present. He has also taken his favorite authors into the garden, and has then and there conversed with them about the plants which they loved. Canon Ellacombe has been a successful commentator on the plant-lore of Shakspere, but he embodies in the present volume practically little of what he has elsewhere published about Shakspere. His final chapter, however, concerns the great dramatist in a very novel way, namely, the relation of Shakspere to architecture. The book throughout is chatty and agreeable, and, so far as an enjoyable perusal has shown, free from errors of fact.

The Canon's amiable qualities are further manifest in the sympathetic editing which Forbes Watson's 'Flowers and Gardens' has received at his hands. This book, written during the last months of a fatal illness, has long been a favorite with a fortunate few on account of its sweetness and strength. It has been out of print for a good while, and it had apparently little chance of a new edition at this late day. The period which has elapsed since its appearance covers almost one generation, and it is that generation, too, in which every one has become habituated to new ways of looking at things. But there was a side which plants and their flowers turned towards Watson that must always be and seem the same to the discerning eye. The Canon says, in his appreciative words:

"Forbes Watson knew that there was nothing wasted in plant life, and that each stem and leaf and flower had its separate functions in building up the life of the plant. But to his artistic mind there was something in stem and leaf and flower over and above their functions in the growth of the plant; there was beauty, a thing which some of his books noticed, but of which they gave no account. He could not stop there; he was a deeply religious man, and he felt that nothing was made in vain, and that the beauty of leaf and flower had its functions, and was as necessary to the life of the plant as any other part of it. So he set himself to learn what the flowers could tell him of this beauty which gladdened his eyes, but which he felt sure could be made to teach him more. . . . He went straight to the flowers—for the most part the commonest every-day flowers—and asked them to tell him the secret of their beauty, and he got his answer; and the answer was that there was not a line of color in any part, not an outline in any petal, not a curve in any leaf, that could be spared or altered; every such line of color, outline, and curve had its work to do, and did it, not only in the best, but in the only possible way."

Forbes Watson's book is not silly or sickly. It is the sane record of a sound and devout naturalist. The key to his writing is this (p. 162):

"Above all things, scorn nothing. Never fear to admire old-fashioned flowers because they are spoken of with contempt. Never fear to look for yourself; to form, and slowly, if necessary, your own opinion. Scorn, in fact, of anything save moral evil, is perhaps the basest passion known to man. Nothing is farther removed from the character of a true-hearted Christian gentleman (and two sorts of gentlemen can hardly be said to exist); or, to use a vulgar phrase, there is nothing in the world so snobbish. There are many wide differences between the prince and the peasant, but in whatever rank you meet a snob, habitual scorn of others, or of any of the works of God, is the infallible mark by which you know him."

BOOKS OF THE WEEK.

Bangs, J. K. Olympian Nights. Harper & Bros. $1.25.
Beddard, F. E. Mammalia. Macmillan. $4.
